PREFACE ix

Stabilized Finite Element Formulations for Incompressible Flow Computations

T. E. Tezduyar

I. Introduction	1
II. The Governing Equations	7
III. The Space–Time Formulation and the Galerkin/Least-Squares Stabilization	9
IV. The Formulations with the SUPG and PSPG Stabilizations	15
V. Application to Moving Boundaries and Interfaces: The DSD/ST Procedure	26
VI. Concluding Remarks	38
References	42

Some Interesting Issues in Incompressible Fluid Dynamics, Both in the Continuum and in Numerical Simulation

P. M. Gresho

I. Introduction	46
II. The Omnipotence of the Incompressibility Constraint	47
III. The Navier–Stokes Equations: A Well-Posed IBVP	50
IV. Alternate Forms of the Navier–Stokes Equations	52
V. Derived Equations	56
VI. Boundary Conditions for the Velocity and Pressure	60
VII. Boundary Conditions for the Vorticity	77
VIII. Initial Conditions	103
IX. Semi-discretizations via Differential-Algebraic Equations	117
X. Further Discussion	125
XI. Summary and Conclusions	131
Acknowledgments	133
References	133

Effective Equations for Multiphase Flows—Waves in a Bubbly Liquid*Michael J. Miksis and Lu Ting*

I. Introduction	142
II. The Method of Homogenization	148
III. Review of Single Bubble Dynamics	154
IV. Formulation, Scalings, and Physical Interpretations	162
V. Effective Equations	180
VI. Foldy's Method for Very Small Gas Volume Fraction	199
VII. Solutions of Cell Problems and Effective Equations for $\beta_0 \gg \varepsilon$	209
VIII. Properties of the Effective Equations for a Small β_0	231
IX. Concluding Remarks	251
Acknowledgments	256
References	256
