CONTENTS OF VOLUME II	xv

Section 1

FUNDAMENTAL KINETIC THEORY AND SOLUTIONS OF THE BOLTZMANN EQUATION

Generalized Magnetohydrodynamic Equations for Nonequilibrium Plasma Systems	1
<i>Willis L. Everett</i>	
Asymptotic Theory of the Boltzmann Equation, II	26
<i>Harold Grad</i>	
On the Convergence and Error Estimation of the Iterative Solution to the Nonlinear Boltzmann Equation	60
<i>W. A. Janos</i>	
The Generalized Validity of the Boltzmann Equation for Ionized Gases	75
<i>Toyoki Koga</i>	
A Criterion for the Degree of Departure from Equilibrium and Its Application to Rarefied Gases	94
<i>Michal Lunc</i>	
A New Approach to Nonequilibrium Statistical Mechanics of Gases	102
<i>J. E. McCune, G. Sandri, and E. A. Frieman</i>	
On the Relaxation of Gases toward Continuum Flow	115
<i>J. E. McCune, T. F. Morse, and G. Sandri</i>	
A Molecular Approach to Rarefied Gas Dynamics	136
<i>W. J. Schaetzle</i>	

Sound Propagation According to the Kinetic Theory of Gases	159
<i>L. Sirovich and J. K. Thurber</i>	
Calculation of Collision Integrals in the Moment Equations	181
<i>Kurt Suchy</i>	
Heat Transfer in a Rarefied Gas between Parallel Plates at Large Temperature Ratios	209
<i>D. Roger Willis</i>	
Théorie Cinétique des Phénomènes de Dissipation dans les Mélanges de Gaz; Application au Calcul des Coefficients de Dissipation par une Méthode Simplifiée	226
<i>J. P. Guiraud</i>	
Application de la Méthode des Valeurs Propres à l'Équation de Boltzmann des Gaz Faiblement Ionisés.	252
<i>J. Naze</i>	
The Structure of Strong Shock Waves in the Krook Collision Model	260
<i>Moustafa T. Chahine</i>	
Determination of Shock-Wave Thicknesses by the Monte Carlo Method	274
<i>J. K. Haviland</i>	
Shock Wave Structure with Rotational and Vibrational Relaxation	297
<i>S. M. Scala and L. Talbot</i>	

Section 2

MOLECULAR BEAMS AND SURFACE INTERACTIONS

Surface Erosion in Space	315
<i>Daniel McKeown</i>	
The Surface Re-Emission Law in Free Molecule Flow	327
<i>Silvio Nocilla</i>	
The Reflection of Modulated Helium and Deuterium Molecular Beams from Platinum Surfaces	347
<i>Sheldon Datz, George E. Moore, and Ellison H. Taylor</i>	

Experiments on Charge and Momentum Exchange between Ions and Molecules in the Development of High-Speed Molecular Beams	362
<i>F. M. Devienne, B. Crave, J. Souquet, and R. Clapier</i>	
The Use of Revolving Disks in the Study of Interaction between Molecules and a Surface	387
<i>F. Marcel Devienne and G. M. Forestier</i>	
Investigation of the Scattering of Gas Molecules on Various Surfaces	414
<i>W. Jawtusch</i>	
Recent Investigations of Gas-Surface Interactions Using Modulated-Atomic-Beam Techniques	430
<i>Joe N. Smith, Jr., and Wade L. Fite</i>	
Studies of Normal Momentum Transfer by Molecular Beam Techniques.	454
<i>R. E. Stickney and F. C. Hurlbut</i>	
Energy Transfer during Atom Recombination on Solid Surfaces	470
<i>Henry Wise and Bernard J. Wood</i>	
Influence of Shock Waves on the Generation of High-Intensity Molecular Beams by Nozzles.	478
<i>K. Bier and O. Hagena</i>	
Molecular Beams from Nozzle Sources	497
<i>John B. Fenn and Jacques Deckers</i>	
Characteristics of Aerodynamic Molecular Beams	516
<i>John E. Scott, Jr., and James E. Drewry</i>	
SUBJECT INDEX	539
