

## CONTENTS

Statistical-Mechanical Theory of Transport Processes. X. The Heat of Transport in Binary Liquid Solutions. <i>By Richard J. Bearman, John G. Kirkwood, and Marshall Fixman</i>	1
Theoretical and Experimental Aspects of Isotope Effects in Chemical Kinetics. <i>By Jacob Bigeleisen and Max Wolfsberg</i>	15
Dielectric Properties of Dilute Polymer Solutions. <i>By L. de Brouckère and M. Mandel</i>	77
Some Physical Aspects of Gaseous Chemical Kinetics. <i>By G. Careri</i>	119
Transport Processes in Liquids. <i>By Frank C. Collins and Helen Raffel</i>	135
The Relation Between Structure and Chemical Reactivity of Aromatic Hydrocarbons with Particular Reference to Carcinogenic Properties. <i>By R. Daudel</i>	165
Molecular Theory of Surface Tension. <i>By A. Harasima</i>	203
Recent Developments in Molecular Orbital Theory. <i>By H. C. Longuet-Higgins</i>	239
Intermolecular Forces and Equation of State of Gases. <i>By Taro Kihara</i>	267
On Statistical Mechanics and Electromagnetic Properties of Matter. <i>By P. Mazur</i>	309
The Application of the Theory of Stochastic Processes to Chemical Kinetics. <i>By Elliott W. Montroll and Kurt E. Shuler</i>	361
Author Index	401
Subject Index	409

# STATISTICAL-MECHANICAL THEORY OF TRANSPORT PROCESSES. X. THE HEAT OF TRANSPORT IN BINARY LIQUID SOLUTIONS\*

RICHARD J. BEARMAN,<sup>†</sup> JOHN G. KIRKWOOD, and MARSHALL  
FIXMAN,<sup>††</sup> *Sterling Chemistry Laboratory, Yale University*

## CONTENTS

I. Introduction	1
II. Phenomenological Theory	2
III. Statistical-Mechanical Expressions for the Densities and Fluxes	3
IV. The General Expression for the Heat of Transport	6
V. An Approximate Formula for the Heat of Transport	12
References	13

# THEORETICAL AND EXPERIMENTAL ASPECTS OF ISOTOPE EFFECTS IN CHEMICAL KINETICS \*

JACOB BIGELEISEN and MAX WOLFSBERG, *Chemistry  
Department, Brookhaven National Laboratory*

## CONTENTS

I. Introduction . . . . .	16
II. Theory of the Isotope Effect on Reaction Rates . . . . .	17
A. Introduction . . . . .	17
B. Discussion of Isotope Effect in Transition State Theory .	18
C. General Predictions on Kinetic Isotope Effects . . . . .	26
III. The Reaction Coordinate . . . . .	28
IV. Unimolecular Reactions . . . . .	31
V. Experimental Methods. . . . .	35
A. Chemical <i>vs.</i> Isotopic Competitive Methods . . . . .	36
B. Kinetics of the Isotopic Competitive Method. . . . .	37
(1) Isotopic Analysis of the Substrate after a Known Amount of Reaction . . . . .	38
(2) Isotopic Analysis of the Product after a Known Amount of Reaction . . . . .	40
(3) Application of the Isotopic Competitive Method to Systems at the Tracer Concentration Level . . . . .	41
(4) The Low Conversion Approximation . . . . .	42
(5) The Method of Successive Product Fractions. . . . .	43
(6) Intramolecular Isotope Effects — A Special Case of the Isotopic Competitive Method . . . . .	44
(7) The Determination of the Isotope Ratios and the Prob- lem of Isotopic Homogeneity . . . . .	48
(8) Pre-equilibria . . . . .	50
VI. Hydrogen Isotope Effects in Gas Reactions . . . . .	53
VII. Hydrogen Isotope Effects in Reactions in Solution . . . . .	61
A. Isotope Effect in the Elucidation of Reaction Mechanism	61
B. Location of Kinetically Significant Hydrogen . . . . .	62

\* Research carried out under the auspices of the U.S. Atomic Energy Commission.

C. Acid-Base Catalysis in H <sub>2</sub> O—D <sub>2</sub> O Solvents	62
D. Secondary Isotope Effects	63
VIII. Carbon Isotope Effects in Decarboxylation Reactions	65
A. Intermolecular and Intramolecular Isotope Effects	65
B. Catalyzed Decarboxylations	72
C. C <sup>13</sup> <i>versus</i> C <sup>14</sup> Isotope Effects	73
IX. Acknowledgments	73
References	74

# DIELECTRIC PROPERTIES OF DILUTE POLYMER SOLUTIONS

L. DE BROUCKÈRE and M. MANDEL, *Faculty of Science, University  
of Brussels*

## CONTENTS

I. General Introduction	77
II. Theoretical Considerations on Static Dielectric Constants	78
III. Theoretical Considerations on Dielectric Relaxation	83
IV. The Dipole Moment of the Isolated Polymer Chain Molecule	89
V. The Dipole Moment of Polymer Chains in Dilute Solutions	95
VI. Interaction between Polymer and Polar Solvents in Dilute Solutions	101
VII. Dielectric Relaxation of High Polymers in Dilute Solutions	106
VIII. Conclusions	116
References	116

# SOME PHYSICAL ASPECTS OF GASEOUS CHEMICAL KINETICS

G. CARERI, *Istituto di Fisica, Università di Padova*

## CONTENTS

I. Introduction	119
II. A Discussion on the Collision Theory	120
III. An Experimental Test of the Activated State Method	124
IV. Some Theoretical Investigations of the Equilibrium Hypothesis.	129
V. Conclusions	133
References	133

# TRANSPORT PROCESSES IN LIQUIDS \*

FRANK C. COLLINS and HELEN RAFFEL, *Polytechnic Institute of  
Brooklyn*

## CONTENTS

I. Introduction	135
II. Statistical-Mechanical Background	139
III. Brownian Motion Theory	141
IV. Brownian Motion Treatment of Transport Processes	143
V. Transport Processes and the Superposition Hypothesis	153
VI. Rigid Sphere Model	154
VII. Cell Theory and Transport Processes	161
VIII. Transition State Theory of Transport Processes	161
IX. Conclusion	163
References	163

# THE RELATION BETWEEN STRUCTURE AND CHEMICAL REACTIVITY OF AROMATIC HYDROCARBONS WITH PARTICULAR REFERENCE TO CARCINOGENIC PROPERTIES

R. DAUDEL, *Sorbonne and Centre de Chimie Théorique de France*

## CONTENTS

I. Introduction	165
II. General Remarks	166
III. Electronic Organization of Atoms	168
IV. Electronic Organization and the Classification of Chemical Bonds	170
V. The Structure of Aromatic Hydrocarbons	173
VI. Theoretical Calculation of the Relative Rates of Reaction of Aromatic Hydrocarbons; Comparison with Experimental Data.	179
VII. Applications to the Study of the Carcinogenic Power of Aromatic Hydrocarbons	191
References	199

# MOLECULAR THEORY OF SURFACE TENSION

A. HARASIMA, *International Christian University*

## CONTENTS

I. Introduction	203
II. Thermodynamics of Surface Tension	204
III. Calculation of the Surface Energy	208
IV. Relation between the Surface Energy and the Heat of Vaporization	214
V. Statistical-Mechanical Treatment of the Surface Tension	216
VI. Stresses in the Transition Layer	220
VII. Critique of the Assumption of a Mathematical Plane of Density Discontinuity	226
VIII. Approximate Theories of Surface Tension	227
IX. Quantum-Mechanical Treatment	230
References	236

# RECENT DEVELOPMENTS IN MOLECULAR ORBITAL THEORY

H. C. LONGUET-HIGGINS, *Department of Theoretical Chemistry,  
University of Cambridge*

## CONTENTS

I. Introduction	239
II. The Method of Molecular Orbitals	240
III. The Self-Consistent Field MO Theory	242
IV. Aromatic Hydrocarbon Spectra	245
V. Open Shell Molecules	259
VI. More Complex Molecules	260
VII. Free-Electron MO Theory	262
References	263

# INTERMOLECULAR FORCES AND EQUATION OF STATE OF GASES

TARO KIHARA, *Department of Physics, University of Tokyo*

## CONTENTS

I. Additive and Nonadditive van der Waals Interactions	267
A. Van der Waals Interactions by Perturbation Theory	268
B. Van der Waals Interactions by Variation Method	273
C. A Standard Model of the Intermolecular Potential	277
II. Second and Third Cluster Integrals	278
A. Cluster Integrals and Equations of State	279
B. Quantum Corrections to the Cluster Integrals	283
C. Cluster Integrals for the Standard Potential	288
D. Comparison with Experiment for Rare Gases	291
III. Dense Gases and Phase Transitions	294
A. Condensed Gases at Low Temperatures	295
B. Condensed Gases at High Temperatures	297
C. A Lattice Model of Hot Dense Gases	301
IV. Acknowledgments	306
References	306

# ON STATISTICAL MECHANICS AND ELECTROMAGNETIC PROPERTIES OF MATTER

P. MAZUR, *Lorentz Institute, University of Leiden*

## CONTENTS

I. General Concepts	310
A. Statistical Mechanics and Electromagnetic Properties of Matter	310
B. Formalism	311
C. Time Derivative of a Dynamical Quantity	313
D. Definitions of Densities; Electric and Magnetic Moments	314
E. Conservation Laws	315
II. Derivation of the Maxwell Equations from Electron Theory	317
A. Introduction	317
B. Derivation of the Maxwell Equations Corresponding to Eqs. II.1 to II.3	320
C. Derivation of the Fourth Maxwell Equation	322
D. General Remarks	324
III. Ponderomotive Force in a Dielectric	325
A. Introduction	325
B. Balance of Translational Momentum of the Atoms	326
C. Pressure and Ponderomotive Force in a Dielectric	330
D. Alternative Form of Ponderomotive Force and Pressure at Equilibrium	331
IV. Refraction of Light	335
A. Introduction	335
B. The Integral Equation for the Average Polarization	336
C. Generalization of the Lorentz-Lorenz Formula	339
D. The Molecular Equation for the Dipole Moments	342
E. Variation of the Lorentz-Lorenz Function with Density	346
V. Molecular Theory of Light Scattering	349
A. Introduction	349
B. The Microscopic Field	350
C. Expansion of the Microscopic Field as a Power Series in $\alpha_0$	352
D. Intensity of Scattered Light	354
Appendix I	356
Appendix II	357
Appendix III	358
References	359

# THE APPLICATION OF THE THEORY OF STOCHASTIC PROCESSES TO CHEMICAL KINETICS \*

ELLIOTT W. MONTROLL, *Institute for Fluid Dynamics and Applied  
Mathematics, University of Maryland*

and

KURT E. SHULER, *National Bureau of Standards*

## CONTENTS

I. Introduction	361
A. The Curtiss-Prigogine-Takayanagi Model	362
B. The Model of Zwolinski and Eyring	363
C. The Model of Kramers	365
II. Discrete Energy-Level Model for Unimolecular Reactions	367
III. Transitions without Reaction	371
IV. Reaction as an Absorbing Barrier	373
V. General Theory of Mean First Passage Time	377
VI. Perturbation Theory and Equilibrium Theory of Chemical Kinetics	380
VII. The Harmonic Oscillator	382
Appendix I	392
Appendix II	396
References	398
