The Problem of Barriers to Internal Rotation in Molecules.	
<i>By E. Bright Wilson, Jr.</i>	367
Author Index	395
Subject Index	403

# CLATHRATE SOLUTIONS

J. H. VAN DER WAALS and J. C. PLATTEEUW, *Koninklijke/Shell-Laboratorium, Amsterdam*

## CONTENTS

I. Introduction	2
A. General Nature of Clathrates	2
B. Structural Information	6
(1) Hydroquinone Clathrates	6
(2) Hydrates	7
II. Statistical Theory	10
A. Basic Assumptions	10
B. Construction of Partition Function	12
C. Nature of the Approximation	16
D. Stability of Clathrate and the Equilibrium $Q^{\alpha}$ -clathrate- $A$ (gas)	18
(1) Hydroquinone Clathrates	20
(2) Hydrates	21
E. Evaluation of the Cell Partition Function by the Method of Lennard-Jones and Devonshire	23
F. Numerical Calculations	28
(1) Hydroquinone Clathrates	28
(2) Hydrates	31
III. Heterogeneous Equilibria	34
A. General Remarks	34
B. Hydroquinone Clathrates	35
(1) The Binary System Hydroquinone-Rare Gas	35
(2) The Binary System Hydroquinone-Methanol	39
C. Hydrates	41
(1) Binary Systems	41
(2) Ternary Systems	44
(a) Systems in which Hydrates of One Structure Occur	44
(b) Systems in which Hydrates of Both Structures Occur	46
References	55

# INTER- AND INTRAMOLECULAR FORCES AND MOLECULAR POLARIZABILITY

KENNETH S. PITZER, *Department of Chemistry and Radiation  
Laboratory, University of California \**

## CONTENTS

I. Introduction	59
II. Theory for Many-Electron Systems	61
A. Polarizability	61
B. London Forces	64
III. Experimental Intermolecular Energies	69
IV. Intramolecular Applications	74
A. Saturated Hydrocarbons	74
B. Unsaturated Hydrocarbons	76
C. Halogens	77
V. Anisotropic Effects	79
A. Polarizability	79
B. London Forces	81
References	82

# THE SOLUBILITY OF SOLIDS IN COMPRESSED GASES

J. S. ROWLINSON and M. J. RICHARDSON, *Department of Chemistry,  
The University, Manchester*

## CONTENTS

I. Introduction	86
II. Phase Equilibria	86
III. Recent Work on Simple Systems	95
A. Helium + Xenon	95
B. Hydrogen + Xenon	96
C. Nitrogen + Xenon	96
D. Hydrogen + Nitrogen	96
E. Hydrogen + Carbon Monoxide	96
F. Helium + Carbon Dioxide	96
G. Hydrogen + Carbon Dioxide	96
H. Air + Carbon Dioxide	97
I. Methane + Carbon Dioxide	97
J. Carbon Dioxide + Iodine	98
K. Nitrogen + Ammonia	98
L. Air + Ice	98
M. Propane + Iodoform, Methyl Ether + Iodoform	99
N. Nitrogen + Phenanthrene	99
O. Steam + Quartz	99
P. Ethane + Hexachlorethane	100
Q. Propane + Mercury, <i>n</i> -Butane + Mercury	103
IV. Theory	104
V. The Second Virial Coefficient and the Forces Between Unlike Molecules	107
A. Hydrogen + Nitrogen	108
B. Hydrogen + Carbon Monoxide	108
C. Helium + Carbon Dioxide, Hydrogen + Carbon Dioxide	110
D. Air + Carbon Dioxide	111
E. Helium + Xenon, Hydrogen + Xenon, Nitrogen + Xenon	112
VI. The Effects of Solubility on Other Physical Measurements	113
References	115

# THERMODYNAMICS OF METALLIC SOLUTIONS

R. A. ORIANI, *General Electric Research Laboratory*

## CONTENTS

I. Introduction	120
A. Early History of the Theory of Metal Solutions	120
B. Experimental Techniques	121
II. Thermodynamic Characteristics of Superlattice Systems	122
A. The Quasi-Chemical Theory	122
B. Characteristics of Ordering Systems at Temperatures Above $T_c$	123
(1) The Copper-Gold System	123
(2) Other Ordering Systems	125
C. Characteristics of the Order-Disorder Transitions	126
(1) Change of $w$ with Phase	126
(2) Order of the Superlattice Reaction	127
(3) Possible Correlation between Melting Temperature and $T_c$	129
III. Nonconfigurational Factors of Solution Formation	130
A. Introduction	130
B. Excess Entropy of Concentrated Solutions	131
(1) Vibrational Entropy	131
(2) Magnetic Disordering Entropy	131
C. Vibrational Entropy in Dilute Solutions	133
IV. Statistical Models of Solutions	134
A. Introduction	134
B. The Average-Potential Model	134
C. The Quasi-Chemical Theory Applied to Dilute Solutions	137
V. The Elastic Model of a Solid Solution	140
VI. Summary and Conclusions	143
References	144

# RECENT ADVANCES IN POLYMER CHEMISTRY

M. SZWARC, *Department of Chemistry, N. Y. State University College of  
Forestry at Syracuse University*

## CONTENTS

I. Introduction	147
II. Addition Polymerization	148
III. Initiation of Polymerization	148
IV. Propagation of Polymerization	158
V. Termination	173
References	184

# NUCLEAR QUADRUPOLE RESONANCE IN IRRADIATED CRYSTALS\*

JULES DUCHESNE, *Institut d'Astrophysique, University of Liège*

## CONTENTS

I. Introduction	187
II. Nuclear Quadrupole Resonance	188
A. Valency Questions	189
B. Resonance Intensity in Mixed Crystals	190
III. Research in Radiation Chemistry	191
A. Analysis of the Method	192
B. Scope of Research	193
C. Radiation Resistance to Gamma-Rays	194
IV. Discussion of the Results	196
V. Tentative Interpretations of Radiation Resistance	199
VI. Post Effects and Oxygen Effect	201
VII. Neutron-Irradiated Sodium Chlorate	202
VIII. Study of the Broadening Effect of Resonance Lines	203
IX. General Conclusions	204
References	205

# CORRELATION PROBLEM IN MANY-ELECTRON QUANTUM MECHANICS \*

## I. REVIEW OF DIFFERENT APPROACHES AND DISCUSSION OF SOME CURRENT IDEAS

PER-OLOV LÖWDIN, *Quantum Chemistry Group, University of Uppsala*

### CONTENTS

I. Introduction	209
II. Formulation of the Correlation Problem	212
A. Schrödinger Equation for an Electronic System	212
B. Density Matrices	214
C. Coulomb Correlation. General Remarks	216
(1) Effect of the Two-Particle Repulsion	216
(2) Pauli Principle and the Fermi Hole	217
(3) Virial Theorem and Scaling	219
D. Independent-Particle Model and Correlation Error	223
(1) The Hartree-Fock Scheme	223
(2) Construction of Pure Spin States in the HF Method	227
(3) The Correlation Error	231
(4) Magnitude of the Correlation Energy	236
(a) Correlation Energy of the He-like Ions	239
(b) Correlation Energy of Be, F <sup>-</sup> , and Al <sup>3+</sup>	240
(c) Correlation Energy of the Covalent Bond; the H <sub>2</sub> Molecule	241
(d) Cancellation of Correlation Effects	246
III. Methods for Treating Electronic Correlation	248
A. Historical Development and Basic Ideas. Hylleraas' Work on the Helium Atom	248

\* The research in this paper has been sponsored in part by King Gustaf VI Adolf's 70-Years Fund for Swedish Culture, Knut and Alice Wallenberg's Foundation, the Swedish Natural Science Research Council, the Texas-Swedish Cultural Foundation, and in part by the Aeronautical Research Laboratory, Wright Air Development Center of the Air Research and Development Command, United States Air Force, through its European Office under a contract with Uppsala University.

# PER-OLOV LÖWDIN

B. Wigner's Study of the Alkali Metals	252
(1) Accuracy of Wigner's Formula: Criticism of "Uniform Positive Background" Model	255
C. Brief Survey of Current Situation	256
D. Superposition of Configurations	259
(1) Arbitrary Complete Basic Set	259
(a) Treatment of Ground State and Lower Excited States. Upper and Lower Bounds for Eigenvalues. Accuracy of the Wave Functions	262
(b) Extension of the Scaling Procedure	269
(c) Remainder Problem. A Numerical Method for Solving Secular Equations of High Order	270
(2) Different Types of Complete Sets. Importance of the Continuum in Using Hydrogen-like Orbitals	274
(3) Natural Spin Orbitals	277
(a) Case of Two-Electron Systems	279
(4) Hartree-Fock Functions as Basis	283
(5) Use of Projection Operators in the Method of Superposition of Configurations	285
(6) Applications to Atoms and Molecules	294
E. Correlated Wave Functions	297
(1) Power Series Expansions and Formal Solutions	297
(a) Helium Atom	297
(b) Hydrogen Molecule	300
(2) Method with Correlation Factor	300
(a) Two-Electron Systems: He-like Ions and H <sub>2</sub> Molecule	300
(b) Many-Electron Systems: Connection with Wigner's Theory and the Plasma Model	304
F. Different Orbitals for Different Spins	307
(1) New Method for Constructing Pure Spin Functions. Extended Hartree-Fock Scheme	307
(2) Higher Approximations. Introduction of Correlation Factor	311
(3) Unrestricted Hartree-Fock Scheme. Exchange Polarization	313
IV. Recent Developments; Concluding Remarks	315
A. Survey of the Expansion Methods	315
B. Some Recent Developments: Bohm-Pines' Plasma Model, Brueckner's Approximation	318
C. Variation of the Density Matrix	319
D. Aspects for the Future	320
References	321

# CORRELATION PROBLEM IN MANY-ELECTRON QUANTUM MECHANICS.

## II. BIBLIOGRAPHICAL SURVEY OF THE HISTORICAL DEVELOPMENT WITH COMMENTS

HIROYUKI YOSHIKUMI,\* *Quantum Chemistry Group, University of  
Uppsala*

### CONTENTS

I. Introduction	323
II. General Bibliography	325
III. References Concerned with SCF	359
IV. Atoms	360
V. The Hydrogen Molecule	362
VI. Simple Molecules.	363
VII. $\pi$ -Electron Systems	364

# THE PROBLEM OF BARRIERS TO INTERNAL ROTATION IN MOLECULES

E. BRIGHT WILSON, JR., *Department of Chemistry, Harvard  
University*

## CONTENTS

I. Introduction	367
II. Methods of Measurement of Potential Barriers	369
A. Thermodynamic Method	369
B. Dipole Moment Method	372
C. Electron Diffraction Method	372
D. Infrared and Raman Method	373
E. Nuclear Magnetic Resonance Method	375
F. Dispersion of Sound Method	376
G. Microwave Intensity Method	376
H. Microwave Splitting Method	378
I. Nonrigid Treatment	380
III. Empirical Discussion of Barrier Values	381
IV. Theories of the Origin of Barriers	383
V. Conclusion	391
References	392
