

CONTENTS

PART I: ELECTRONIC STRUCTURE AND SPECTRA

Some recent developments in the quantum theory of many-electron systems and the correlation problem. <i>By Per-Olov Löwdin</i>	3
Calculation of transition energies from the geometry of the system. <i>By J. Barriol and J. Regnier</i>	5
Optical absorptions and charge transfer states. <i>By Robert Englman</i>	13
Model calculations in the theory of mixed-crystal spectra. <i>By D. P. Craig</i>	27
Applications of ligand-field theory to complexes. <i>By Chr. Klixbüll Jørgensen</i>	47

PART II: CHEMICAL AND BIOCHEMICAL ACTIVITY

Chemical reactivity. <i>By Michael J. S. Dewar</i>	65
A self-consistent field molecular orbital treatment of carbonyl base strength. <i>By A. Kende</i>	133
Chemisorption of ethylene on metals and catalytic hydrogenation. <i>By A. Laforgue, Madame J. Rousseau and B. Imelik</i>	141
Steroids, purine-pyrimidine pairs and polycyclic aromatic carcinogens. <i>By Bernard Pullman</i>	163
Some aspects of the biological problems of heredity, mutations, aging, and tumours in view of the quantum theory of the DNA molecule. <i>By Per-Olov Löwdin</i>	177
Author index	181
Subject index	185

MODEL CALCULATIONS IN THE THEORY OF MIXED-CRYSTAL SPECTRA

D. P. CRAIG, *William Ramsay and Ralph Forster
Laboratories, University College, London, England*

CONTENTS

I. Introduction	27
II. Pure Crystals	28
III. Mixed Crystals	30
IV. The One-dimensional Mixed Crystal	31
V. The Molecular-orbital Analogy	32
VI. The Shallow-trap Problem	33
VII. Further Consideration of the $r = 0$ Manifold	35
VIII. A Limiting Formula for Shallow Traps.	36
IX. A Limiting Formula for Deep Traps	37
X. Energies for the Example $m = 6$	37
XI. Manifolds Belonging to $r \neq 0$	39
XII. Intensities in the One-dimensional Mixed Crystals	40
XIII. Applications to Real Crystals	46
References	46

CHEMICAL REACTIVITY

MICHAEL J. S. DEWAR, *Department of Chemistry,
The University of Texas, Austin, Texas*

CONTENTS

I. General Principles	65
II. Chemistry as an Exercise in Perturbation Theory	69
III. Delocalization Energy as the Determining Factor	70
IV. Aromatic Substitution; Free Valence	73
V. The PMO Method	78
VI. Extension to Heteroaromatic Systems	85
VII. The Transition State in Aromatic Substitution	88
VIII. Determination of the Structures of Transition States	91
IX. Isoconjugate Reactions and Substituent Effects	96
X. Other Criteria of Reactivity	102
A. Charge Density	102
B. Self-polarizability	109
C. Frontier-electron Density	110
D. Comparison of the Various Criteria of Reactivity	110
XI. Reactions Involving Cyclic Transition States	112
XII. The Localized Bond Model	117
XIII. Aromaticity	120
XIV. Indirect Calculations of δE_{π}	122
References	129

CHEMISORPTION OF ETHYLENE ON METALS AND CATALYTIC HYDROGENATION

A. LAFORGUE, MADAME J. ROUSSEAU and B. IMELIK

Institut de Physique Générale de la Faculté des Sciences de Lyon,

Institut de Recherches sur la Catalyse du C.N.R.S., Lyon

CONTENTS

I. Previous Work	141
II. Generalities	142
III. Construction of the Model	144
A. Hypotheses Concerning the Relative Positions of the Ethylene Molecule and That of the Metal	144
B. Hypotheses Concerning the Geometric Structure of the Metal	145
(1) Localized Model	145
(2) Deep Chain Model	145
(3) Flat Lattice Model	145
C. Hypotheses Concerning the Electronic Structure of the Metal	145
(1) Introduction	145
(2) Metal p	146
(3) Metal d	147
(a) Principles	147
(b) Study of the Carbon-Metal Bonds	147
(c) Study of the Triangular Model	148
IV. Results Which May Be Obtained by Calculation and Criteria to Be Considered. Adjustment for Experimental Values	151
V. Results	152
VI. Conclusions	157
References	159
