RECOMBINATION OF GASEOUS IONS

BRUCE H. MAHAN*

*Joint Institute for Laboratory Astrophysics, University of Colorado, Boulder,
Colorado*

CONTENTS

I. Introduction	1
II. Experimental Methods	4
III. Bimolecular Ion Recombination	9
A. Experimental Results	10
B. Interpretation	14
IV. Termolecular Ion Recombination	19
A. The Thomson Recombination Theory	19
B. Numerical Calculations	23
C. Multicollision Theories of Recombination	24
D. The Quasiequilibrium Theory of Recombination	27
E. Experimental Results	29
V. Ion Recombination at High Pressure	31
References	38

VIBRATION→VIBRATION ENERGY TRANSFER

C. BRADLEY MOORE

Department of Chemistry, University of California, Berkeley, California

CONTENTS

I. Introduction	41
II. Experimental Methods	43
A. Laser Experiments	43
III. Relaxation Models	52
A. Translational Heating Effects	53
B. Distribution for Relaxing Anharmonic Oscillators	55
C. Rate Constants from Data on Multilevel Systems	58
D. The Interpretation of Spectrophone Data	60
IV. Vibration → Vibration Energy Transfer	62
A. Vibration → Vibration Energy Transfer Processes	62
B. Long-Range Interactions in Nearly Resonant Energy Transfer	64
C. Single-Quantum Intermolecular V → V Transfers	71
D. Other V → V Energy Transfer Processes	77
V. Conclusion	77
Acknowledgments	79
References	79

ESCA*

DAVID A. SHIRLEY

*Department of Chemistry and Lawrence Berkeley Laboratory,
University of California, Berkeley, California*

CONTENTS

I. Introduction	86
II. Chemical Shifts in Core-Electron Binding Energies	86
A. General Comments	86
B. Theoretical Description Based on the Calculation of Binding Energies	90
1. Methods Involving Both Initial and Final States	90
a. General Background	90
b. Results for Atoms and Ions	93
c. Results for Molecules	99
2. Methods Involving the Initial State Only	103
a. Connection Between Hole-State and Frozen-Orbital Calculations	103
b. Comparison of Orbital Energy Differences with Experiment	107
C. Quantum-Mechanical Methods Not Involving Binding-Energy Calculations	112
1. Potential Models	112
2. The ACHARGE Approach	119
3. Atomic Charge Correlations	123
4. Thermochemical Estimates	126
D. Correlations of Binding-Energy Shifts with Other Properties	129
1. Correlations with Other Binding-Energy Shifts	130
2. Correlations with Diamagnetic Shielding Constants	133
3. Correlations with "Pauling Charges" and Electronegativity	135
4. Correlations with "Group Shifts"	139
III. Valence-Shell Structure Studies	140
A. Introduction	140
B. Valence Bands in Metals	140
C. Valence Orbitals in Gases: Cross Sections	144
D. Valence Orbitals in Inorganic Anions	148
IV. Multiplet Splitting	148
A. Introduction	148
B. Multiplet Splitting in Atoms	151
C. Multiplet Splitting in Molecules	151
D. Multiplet Splitting in Salts	154
E. Multiplet Splitting in Metals	155
References	157

* Work performed under the auspices of the United States Atomic Energy Commission.

AB INITIO CALCULATIONS ON SMALL MOLECULES

J. C. BROWNE

*Departments of Computer Science and Physics,
The University of Texas, Austin, Texas*

F. A. MATSEN

*Departments of Chemistry and Physics,
The University of Texas, Austin, Texas*

CONTENTS

I. Introduction	161
II. The Hamiltonian and Computational Organization	162
III. The Helium Molecule and Molecule Ion	167
A. The Dissociation Energy of He_2^+	167
B. The Appearance Potential of He_2^+	169
C. Elastic Scattering of He^+ by He	170
D. The Repulsive Potential Curve between a Pair of Ground State Helium Atoms	170
E. The Long-Range Attractive Potential between Two Ground State He Atoms	173
F. Excited States of the Helium Molecule	174
G. Identification of Molecular Ions in Helium Discharges	179
IV. Some Properties of Lithium Hydride	180
A. The Dipole Moment of LiH	180
B. The Quadrupole Moment of Li^7	181
C. The Electronic Energy of LiH	181
D. The Ionization Potential of LiH	181
V. Summary and Prognosis	182
Acknowledgment	183
Appendix A. New Techniques for Computation	183
References	185

PICOSECOND SPECTROSCOPY AND MOLECULAR RELAXATION

P. M. RENTZEPIS

Bell Telephone Laboratories, Incorporated, Murray Hill, New Jersey

CONTENTS

I. Introduction	189
A. Mode-locking	190
B. Single-Picosecond Pulse	192
II. Measurement of Picosecond Pulses	193
A. Two-Photon Method	193
B. Three-Photon Method	196
III. Direct Measurement of Radiationless Transitions	199
A. Molecules Corresponding to the Statistical Limit—Azulene	201
1. Repopulation of the Azulene Ground State	204
2. Emission between Excited States	206
B. Small Electronic Energy Gap	207
1. 3,4-Benzpyrene	209
2. Naphthalene, NO ₂ , SO ₂	212
IV. Time- and Frequency-Resolved Spectra	213
V. Benzophenone	221
Acknowledgments	223
References	223

SOME MODERN ASPECTS OF EXCITON THEORY*

MICHAEL R. PHILPOTT†

*Institute of Theoretical Science and Department of Chemistry,
University of Oregon, Eugene, Oregon*

CONTENTS

I. Introduction	228
A. Excitons in Molecular Crystals	230
B. Excitons in Polymers	231
C. Excitons in Molecules	233
II. Theories of Single Exciton States	233
A. Perturbation and Finite Basis Theories	234
1. Excitons in Pure Crystals	236
2. Dilute Mixed Crystals with Isotopic Guests	239
3. Dilute Mixed Crystals with Chemical Guests	242
4. Crystals Heavily Doped with Isotopic Guests	244
B. Classical Dipole Theory	247
1. Infinite Pure Crystals with One Molecule per Unit Cell	251
2. Infinite Crystals with Several Molecules per Unit Cell	261
3. Coulombic Excitons in Helical Polymers	265
4. Interstitial Impurities in Infinite Crystals	266
5. Substitutional Impurities in Infinite Crystals	270
6. Excitons and Polaritons in Semi-Infinite Crystals	272
7. Lattice Sums of Instantaneous and Retarded Dipole Interactions	277
C. Second Quantized Theory of Single Exciton States	281
1. Coulombic Excitons in Infinite Crystals and Polymers	284
2. Polaritons in Infinite Molecular Crystals	285
3. Interstitial Impurities in Infinite Crystals	288
4. Substitutional Impurities in Infinite Crystals	289
5. Model Calculations for Dilute Isotopic Mixed Crystals	293
6. Optical Rotation and Circular Dichroism of Helical Polymers	302
III. Comparison with Experiment	308
A. Anthracene	309
1. Electronic States of the Isolated Molecule	309
2. Crystal Spectra of Anthracene	311
3. Theoretical Calculations	319

* Supported in part by the National Science Foundation.

† Alfred P. Sloan Fellow.
