DETERMINATION OF THE STRUCTURE AND PROPERTIES OF SOLID SURFACES BY ELECTRON DIFFRACTION AND EMISSION

C. B. DUKE

Xerox Research Laboratories, Webster, New York

CONTENTS

I. Introduction 2
II. The Characterization of Solid Surfaces: Survey of Techniques 8
  A. Preliminaries and Assumptions 8
  B. Particle-Solid Interactions 12
    1. Scope and Organization 12
    2. Electrons 13
    3. Photons 20
    4. Atoms, Molecules, and Ions 22
  C. Surface Atomic Composition. 25
  D. Surface Geometry 28
  E. Surface Atomic Motion 30
  F. Surface Electronic Structure 32
  G. The Multiple-Technique Strategy 33
III. Low-Energy Electron Diffraction: Concepts and Definitions 35
  A. Intensity Analysis 35
    1. Data Displays. 35
    2. Definition of the Analysis Problem 39
  B. Models of Electron-Solid Interactions. 42
  C. Elastic Diffraction from a Rigid Lattice: Born Approximation 47
  D. Correspondence between Calculated and Measured Intensities: Instrumental Effects 52
  E. Inelastic Electron-Solid Collisions 54
  F. Quasielastic Diffraction from a Vibrating Lattice: Born Approximation 58
IV. Dynamical Theory of Elastic Electron-Solid Scattering at Planar Surfaces 73
  A. Motivation 73
  B. Distorted-Wave Multiple-Scattering Analysis 77
  C. Wave-Function-Matching Analyses 81
  D. Laminar Multiple-Scattering Analyses 83
V. Model Elastic Low-Energy Electron Diffraction Calculations: Inputs, Outputs, and Critique 86

A. Construction of the Electron-Ion-Core Potential 86
B. Empirical Models of the Optical Potential 89
C. Sensitivity Analyses 91
1. Boundary Conditions 91
2. Number of Phase Shifts: Rigid Lattice 98
3. Lattice Vibrations 101
4. Number of Phase Shifts: Vibrating Lattice 103
5. Bulk Electron-Ion-Core Potentials 106
6. Specifically Surface Phenomena: Clean Surfaces 110
7. Adsorbed Overlayer Potentials 112
D. Critique 118
VI. Model Inelastic Low-Energy Electron Diffraction Calculations 124
A. Two-Step Inelastic Diffraction 124
B. Dynamical Inelastic Diffraction. 136
C. Consequences of Line-Broadening Mechanisms 139
VII. Surface Crystallography via Elastic Low-Energy Electron Diffraction 141
A. Scope and Organization 141
B. The Atomic Geometry and Symmetry of Ideal Surfaces 142
C. The Atomic Geometry of Nonideal Surfaces 142
1. Classification of Imperfections 142
2. Single-Step Imperfections 145
3. Multistep Topographies 150
D. Structure Determination for Uniform Surfaces Exhibiting Long-Range Order . 151
1. Relation between Intensity Pattern Symmetry and Atomic Geometry . . . 151
2. Analytical Approaches to Surface Crystallography 154
3. Structure Determination via Dynamical Models of Elastic Low-Energy Electron Diffraction 159
4. Structure Determination via Data Reduction and Kinematical Methods . . 173
E. Structural Analysis for Disordered Surfaces. 181
F. Synopsis. 183
VIII. Dispersion Relations of Electronic Surface Excitations via Inelastic Low-Energy Electron Diffraction 185
A. Determination of Surface Excitation Dispersion 185
1. Nature of the Problem 185
2. Selection of the Level of Analysis 189
3. Analytical Procedure 190
B. Surface Plasmon Dispersion: Al(111) 193
IX. Epilogue: Patterns of the Future. 198

ELECTRON SPECTROSCOPY OF CHEMISORPTION ON METALS

R. GOMER

The James Franck Institute and The Department of Chemistry
The University of Chicago, Chicago, Illinois

CONTENTS

I.	Introduction	211
II.	Theory of Chemisorption	212
	A. Newns-Anderson Model	214
	B. Valence-Bond (Schrieffer-Paulson-Gomer) Approach	224
	C. Linear Response (Kohn-Smith-Ying) Method	225
III.	Theory of Energy Distributions in Field Emission	225
	A. Field Emission	226
	B. Total Energy Distribution	227
	C. Transfer Hamiltonian	231
	D. Energy Distribution in the Presence of Adsorbates	233
IV.	Experimental Considerations	237
	A. Field Emission Microscope	237
	B. Energy Analyzers	239
V.	Photoemission	244
	A. Experimental Aspects of Photoemission	245
VI.	Field and Photoemission Distributions from Selected Systems	246
	A. Ba on W	246
	B. H_2 on W	248
	C. Carbon Monoxide on Tungsten	250
	D. Other Systems	261
VII.	Conclusion	262

SURFACE PLASMA OSCILLATIONS AND RELATED SURFACE EFFECTS IN SOLIDS*

E. N. ECONOMOU

Department of Physics, University of Virginia, Charlottesville, Virginia and

K. L. NGAI

Naval Research Laboratory Washington, D. C.

CONTENTS

I. Introduction 266
A. Solid-State Plasma: General Features 266
B. Surfaces and Their Effects 268
C. Purpose and Organization of This Review 269
II. General Formulation of the Problem: Approximations 270
A. The Hamiltonian; The Linear Response Approximations 270
B. The Dielectric Function 273
C. Boltzmann-Vlasov Equation Approach 276
D. Summary 280
III. Explicit Results for the Eigenmodes 282
A. General Remarks 282
B. Specific Cases 286
1. Parallel Plane Surfaces 286
2. Spherical Geometries 301
3. Circular Cylinder 305
IV. Interactions of Plasma Oscillations with Charged Particles 308
A. General Remarks 308
B. Quantization of Surface Plasma Fields: Electron-Surface Plasmon Interaction Hamiltonian 312
C. Transition Radiation 318
D. High-Energy Electron Losses 320
E. Surface Plasmon Interaction with Low-Energy Electrons 322
1. Low-Energy Electron Diffraction (LEED) 322
2. Electron Tunneling in Solids 324
3. Photoemission 326
4. Field Ion Emission 326
