THEORY AND MOLECULAR MODELS FOR WATER

FRANK H. STILLINGER

Bell Laboratories, Murray Hill, New Jersey

CONTENTS

I.	Introduction	2
A.	Importance of Water	2
B.	Characteristic Properties of Water	3
C.	Suitable Goals for the Theory	4
II.	Properties of the Water Molecule	5
A.	Equilibrium Structure	5
B.	Electrical Properties	6
C.	Normal Modes of Vibration	9
III.	Water-Molecule Interactions	11
A.	Potential-Energy Resolution	11
B.	Identification of Molecules and Ions	12
C.	Dimer Interaction	15
D.	Nonadditivity	23
IV.	Semiclassical Limit	28
A.	Canonical Partition Function	28
B.	Molecular Distribution Functions	31
C.	Distribution Function Formulas	35
V.	Effective Pair Potentials	38
A.	Variational Principle	38
B.	Physical Interpretation	42
VI.	Lattice Theories	45
A.	General Formulation	45
B.	Fleming-Gibbs Version	49
C.	Bell's Version	53
D.	Possible Extensions	57
VII.	Cell Models	59
A.	Cell-Cluster Expansion	59
B.	Weress-Rice Cell Theory	63
VIII.	Molecular Dynamics Simulation	70
A.	Techniques of Computer Simulation	70
B.	ST2 Interaction	73
C.	Nuclear Pair Correlation Functions	75
D.	Hydrogen Bond Patterns	78
E.	Effect of Pressure	81
F.	Molecular Motions	84

THE STRUCTURE OF POLAR FLUIDS*

S. A. ADELMAN AND J. M. DEUTCH

*Department of Chemistry, Massachusetts Institute of Technology,
Cambridge, Massachusetts*

CONTENTS

I.	Introduction	103
A.	Local Structure and the Dielectric Constant	104
B.	Preliminary Survey of the Problem	105
C.	Theories of the Dielectric Constant	110
D.	Polar and Polarizable Fluids	119
II.	Approximate Theories for Polar Fluids	122
A.	The Dielectric Constant	122
B.	Thermodynamics of Polar Fluids	138
III.	Dielectric Relaxation	145
	References	152

THE KINETIC THEORY OF DENSE POLYATOMIC FLUIDS*

JOHN S. DAHLER

*Departments of Chemical Engineering and Chemistry
University of Minnesota, Minneapolis, Minnesota*

MARY THEODOSOPULU

*Faculté des Sciences
Université Libre de Bruxelles, Belgique*

TABLE OF CONTENTS

I. Introduction	155
II. Moment Equations	160
A. Moment Expansion of the Distribution Function	160
B. Derivation of the Moment Equations	162
C. Impulsive Interactions	165
III. Models of Dense Polyatomic Fluids	167
A. Enskog Theory for Rough Spheres	168
B. Enskog Theory for Rigid and Square-Well Ellipsoids	178
C. Enskog Theory for Loaded Spheres	196
D. Rice-Allnatt Theory for Rough Spheres	199
E. The Effective Potential Theory	201
F. Extended PNM Theory	211
G. Brinser and Condif's Generalization of the Enskog Theory	219
IV. Final Remarks	226
References	227

THEORY OF LIQUID CRYSTALS*

DIETER FORSTER†

*The James Franck Institute and The Department of Physics,
The University of Chicago, Chicago, Illinois*

TABLE OF CONTENTS

I. Introduction	231
II. Macroscopic Equilibrium Properties	233
A. The Order Parameter	233
B. The Landau Free Energy	235
C. The Frank Free Energy	236
D. The Static Director Correlation Function	237
III. Mean Field Theory	239
A. The Isotropic-to-Nematic Transition	240
B. The Frank Elasticity Coefficients	243
C. The Isotropic-to-Cholesteric Transition	244
D. The Smectic A Phase	247
IV. Hydrodynamical Fluctuations	251
A. Correlation Functions and Memory Functions	253
B. Macroscopic Equations of Motion	255
C. Pretransitional Fluctuations	257
References	260

THEORY OF ELECTRON STATES IN LIQUID METALS

L. E. BALLENTINE

Simon Fraser University, Burnaby, British Columbia, Canada

TABLE OF CONTENTS

I. Introduction and Basic Concepts	263
II. The Electron-Ion Potential	267
III. The Correlation Functions	270
IV. Cluster Expansions and Diagrammatic Representations	272
A. The Irreducible Self-Energy Operator	272
B. Multiple Scattering and Cluster Expansions	275
C. Evaluation in Momentum Representation	278
V. A Simple Calculation for Aluminum	281
A. Second-Order Perturbation Theory	281
B. Self-Consistent Internal Propagator	283
VI. Can One Usefully Define an E -versus- k Relation?	286
VII. Pseudopotential Calculations	289
A. Green's Function Calculations—Bismuth	290
B. Integrated Density of States	297
C. Calculation of $E_L(k)$	300
D. A Survey of Results for Various Metals	302
VIII. Beyond the Weak-Scattering Limit—Two Problems	306
A. The Single-Atom Problem	306
B. Higher-Order Correlations	309
IX. The Coherent Potential Method	312
X. Tight-Binding Methods	315
XI. Cluster Scattering	319
References	324
Appendix: Calculations of the Density of Electronic States in Liquid Metals	326

LOW-ENERGY ELECTRONS IN NONPOLAR FLUIDS

H. TED DAVIS AND ROGER G. BROWN

*Departments of Chemistry and Chemical Engineering
University of Minnesota, Minneapolis, Minnesota*

TABLE OF CONTENTS

I. Introduction	329
II. Mobility and Work Function Studies	330
III. Electrical Properties of Irradiated Nonpolar Liquids	362
IV. Some Spectroscopic Studies	369
A. Optical Absorption	369
B. Photoionization	376
C. Photoexcitation of Electrons Trapped in Bubbles in Liquid Helium	382
D. Reflection and Emission Spectra of Liquids	384
V. Some Electron-Molecule Reaction Rate Studies	386
VI. Theory of Energy States of Quasi-Free Electrons	394
A. A Wigner-Seitz Pseudopotential Model	394
B. Lekner's Effective-Potential Model	405
C. Construction of a Pseudopotential	410
VII. Kinetic Theory of Quasi-Free Electrons	416
A. Boltzmann Equation for Single-Scatterer Approximation	416
B. Monatomic Systems	426
VIII. Theory of Electronic Bubbles	437
IX. The Role of Localized States in Electron Transport in Disordered Media	445
A. Some General Features of Conductive Bands in Disordered Systems	445
B. Mobility of Electrons in Helium Gas	449
C. Electron Mobility in Hydrocarbon Liquids	452
X. Remarks on the Theory of Radiation Free-Ion Yields	457
References	460

SOLUTIONS OF METALS IN MOLTEN SALTS

NORMAN H. NACHTRIEB

Department of Chemistry, The University of Chicago, Chicago, Illinois

TABLE OF CONTENTS

I. Introduction	465
II. Theoretical Considerations	467
A. Free Electron Model	467
B. Thermally Activated Hopping Model	468
C. F-Center Model	472
Acknowledgements	479
References	480
