# ELECTRONIC CHEMILUMINESCENCE IN GASES

MICHAEL MENZINGER

*Department of Chemistry, University of Toronto, Toronto, M5S 1A1, Canada*

## CONTENTS

I. Introduction . . . . .	1
II. A Hierarchy of Problems and Results . . . . .	4
A. Experimental . . . . .	4
B. Light Yields . . . . .	5
C. Emitter Identification and Analysis . . . . .	8
D. Dissociation Energies . . . . .	9
E. Reaction Mechanisms . . . . .	11
1. Alkali-Halogen Systems . . . . .	11
2. Group IIA Metal-Halogen Systems . . . . .	13
3. $\text{Ba} + \text{N}_2\text{O} \rightarrow \text{BaO}^* + \text{N}_2$ Reaction . . . . .	14
III. Dynamics . . . . .	16
A. The Nuclear Problems . . . . .	17
B. The Electronic Problem . . . . .	20
1. Symmetry-Allowed CL Reactions . . . . .	22
2. Dynamically Induced CL Reactions . . . . .	22
3. Spin-Orbit Effects . . . . .	26
C. Interaction with Theory . . . . .	31
IV. Epilogue . . . . .	34
Acknowledgements . . . . .	35
V. Tables . . . . .	36
References . . . . .	49

# SEMIEMPIRICAL DIATOMICS-IN-MOLECULES POTENTIAL ENERGY SURFACES

JOHN C. TULLY

*Bell Laboratories, Murray Hill, New Jersey, 07974, USA*

## CONTENTS

I. Introduction . . . . .	63
A. The potential Energy Surface . . . . .	63
B. Theoretical Approaches . . . . .	65
II. The Diatomics-in-Molecules Method . . . . .	68
A. Formulation . . . . .	68
1. Expansion of $\Psi$ in Atomic Product Functions . . . . .	69
2. Partitioning of the Hamiltonian. . . . .	69
B. Application of the Method . . . . .	71
1. Selection of Basis Functions . . . . .	71
2. Utilization of Empirical Information . . . . .	72
3. Overlap . . . . .	73
III. Description of Chemical Bonding . . . . .	74
A. Energetics of Bonding . . . . .	74
B. Valence . . . . .	79
C. Directionality of Chemical Bonding . . . . .	80
IV. Case Studies of Simple Chemical Processes . . . . .	84
A. $\text{Na} + \text{FH} \rightarrow \text{NaF} + \text{H}$ . . . . .	87
B. $\text{F} + \text{H}_2 \rightarrow \text{FH} + \text{H}$ . . . . .	91
C. $\text{O} + \text{H}_2 \rightarrow \text{OH} + \text{H}$ . . . . .	97
D. $\text{H}^+ + \text{H}_2 \rightarrow \text{H}_2 + \text{H}^+, \text{H}_2^+ + \text{H}$ . . . . .	102
V. Conclusions . . . . .	109
References . . . . .	110

# DYNAMICS OF OXYGEN ATOM REACTIONS

M. C. LIN

*Chemistry Division, Naval Research Laboratory, Washington, D. C. 20375,  
USA*

## CONTENTS

I. Introduction . . . . .	113
II. Reactions of O( $^3P_j$ ) Atoms . . . . .	115
A. Reaction with vibrationally excited H <sub>2</sub> and HCl . . . . .	115
B. Reaction with Halogen and Interhalogen Molecules . . . . .	118
C. Reaction with CX Radicals . . . . .	121
D. Reaction with Triatomic Species . . . . .	128
E. Reaction with Alkenes and Alkynes . . . . .	136
III. Relaxation and Reactions of O( $^1D_2$ ) Atoms . . . . .	145
A. Quenching by Rare-Gas Atoms . . . . .	145
B. Quenching by O <sub>2</sub> , N <sub>2</sub> , and CO . . . . .	148
C. Reaction with N <sub>2</sub> O, COS, and CO <sub>2</sub> . . . . .	152
D. Reaction with Hydrides . . . . .	154
E. Reaction with Halocarbons . . . . .	160
IV. Relaxation of O( $^1S_0$ ) Atoms . . . . .	160
V. Concluding Remarks . . . . .	162
Acknowledgement . . . . .	162
References . . . . .	162

# EXCITED-STATE POTENTIAL SURFACES AND THEIR APPLICATIONS\*

C. BOTTCHER

*Physics Division, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge,  
Tennessee 37830 USA*

## CONTENTS

I. Introduction . . . . .	169
II. The Calculation of Excited-State Potential Surfaces . . . . .	170
A. General Remarks . . . . .	170
B. Quantum Chemical Methods . . . . .	172
1. <i>Ab Initio</i> Methods . . . . .	172
2. Model and Pseudo-Potential Methods . . . . .	173
3. Other Semi-Empirical Methods . . . . .	177
C. Perturbation Methods . . . . .	180
1. Long-Range Forces . . . . .	181
2. Short-Range Forces . . . . .	184
3. Note on Additivity of Pairwise Interactions . . . . .	187
D. Dynamical Effects . . . . .	187
1. Nuclear Motion . . . . .	188
2. Diabatic States and Avoided Crossings . . . . .	190
3. Electronically Unstable States . . . . .	194
III. Applications to Scattering Problems . . . . .	196
A. Formulation of Atomic and Molecular Scattering Problems . . . . .	197
B. Intermultiplet Transitions . . . . .	198
C. Rotational and Vibrational Excitation . . . . .	199
D. Collisions between Molecules and Excited Atoms . . . . .	201
IV. Conclusions . . . . .	204
Acknowledgement . . . . .	204
References . . . . .	204

# COLLISIONAL EFFECTS ON ELECTRONIC RELAXATION PROCESSES

KARL F. FREED

*The James Franck Institute and The Department of Chemistry  
The University of Chicago, Chicago, Illinois 60637, USA*

## CONTENTS

I. Introduction . . . . .	207
II. Electronic Relaxation in Isolated Molecules . . . . .	209
A. Molecular Model . . . . .	211
B. The Different Limiting Cases . . . . .	213
C. Intramolecular Dephasing . . . . .	219
D. Intramolecular Vibrational Relaxation . . . . .	221
III. Collisional Processes of Small and Intermediate Case Molecules . . . . .	223
A. Description of the Collisions . . . . .	227
1. The Mixed States . . . . .	227
2. The Interaction with Perturbers . . . . .	229
3. The Equations of Motion . . . . .	231
B. Types of Collisional Processes . . . . .	234
1. The Simply Mixed Collisions . . . . .	234
2. The Perturbed Mixing Collisions . . . . .	236
3. Examples of Perturbed Mixing Collisions . . . . .	237
C. Magnetic Field Dependences . . . . .	239
D. Larger Molecules . . . . .	243
E. Collision-Induced Intersystem Crossing at Higher Pressures . . . . .	245
1. Qualitative Description . . . . .	248
2. Theoretical Treatment . . . . .	249
3. Zero-Pressure Limit Revisited . . . . .	249
4. Density Matrix Theory at Non-zero Pressures . . . . .	250
IV. Collisional Effects on Electronic Relaxation in the Large Molecule Limit . . . . .	252
A. Kinetic Model . . . . .	254
B. The Kinetic Equations . . . . .	257
C. Pressure Dependence in Statistical Limit . . . . .	259
Acknowledgements . . . . .	264
Appendix: Derivation of Phase Shift in Kinetic Model . . . . .	264
References . . . . .	266

# VIBRATIONAL AND ROTATIONAL COLLISION PROCESSES\*

ANDREW E. DePRISTO† AND HERSCHEL RABITZ‡

*Department of Chemistry, Princeton University, Princeton,  
New Jersey 08540, USA*

## CONTENTS

I. Introduction . . . . .	271
II. Survey of Experimental Methods . . . . .	273
III. Intermolecular Potentials . . . . .	276
IV. Dynamics . . . . .	278
A. Classical Mechanics . . . . .	278
B. Semiclassical Theory . . . . .	280
C. Quantum Mechanical Theory . . . . .	282
V. Kinematics . . . . .	285
A. Effective Hamiltonian Methods . . . . .	286
B. Stochastic Methods . . . . .	291
VI. Inversion of Experimental Data . . . . .	294
VII. Sensitivity Analysis in Molecular Dynamics . . . . .	297
References . . . . .	301

# THEORETICAL STUDIES OF VIBRATIONAL ENERGY RELAXATION OF SMALL MOLECULES IN DENSE MEDIA

D. J. DIESTLER

*Department of Chemistry, Purdue University, W. Lafayette, Indiana, 47907,  
USA*

## CONTENTS

I. Introduction . . . . .	305
II. Classical Methods . . . . .	311
A. Molecular Dynamics . . . . .	311
B. Stochastic Classical Trajectory Method . . . . .	315
III. Semiclassical Models . . . . .	319
A. General Treatments . . . . .	319
B. A Binary-Collision Model . . . . .	321
IV. Quantum Mechanical Models . . . . .	323
A. Two-Level Models . . . . .	323
B. Harmonic-Oscillator Models . . . . .	325
C. Generalization of the Two-Level Model . . . . .	327
D. Multiphonon Models . . . . .	329
V. Role of Orientational Motions . . . . .	333
A. Three-Dimensional Models . . . . .	333
B. Two-Dimensional Models . . . . .	335
VI. Extended View of the Participation of Local Modes . . . . .	339
A. General Theory . . . . .	340
B. Application . . . . .	344
VII. Summary and Discussion . . . . .	345
References . . . . .	349

# SPECTROSCOPY AND POTENTIAL ENERGY SURFACES OF VAN DER WAALS MOLECULES

ROBERT J. LE ROY AND J. SCOTT CARLEY

*Guelph-Waterloo Centre for Graduate Work in Chemistry,  
University of Waterloo, Waterloo, Ontario, N2L 3G1, Canada*

## CONTENTS

I. Introduction . . . . .	354
II. Experimental Methods and Results . . . . .	357
A. Bulk Gas (Equilibrium) Studies . . . . .	357
B. Spectroscopy in Molecular Beams . . . . .	360
1. General . . . . .	360
2. Rabi Spectroscopy . . . . .	361
3. Laser-Induced Fluorescence . . . . .	362
4. Bolometer Spectroscopy . . . . .	364
III. Theory for Atom-Diatom Complexes . . . . .	365
A. Coordinates, Classification, and Hamiltonian . . . . .	365
1. Coordinates and Potential Expansion . . . . .	365
2. The Hamiltonian . . . . .	367
3. Classification . . . . .	369
B. Coupled Channel Formulation . . . . .	370
1. In Space-Fixed Coordinates . . . . .	370
a. Zero-coupling limit and general considerations . . . . .	370
b. Coupled-channel equations and solutions . . . . .	374
2. In Body-Fixed Coordinates . . . . .	376
C. The Secular Equation Method . . . . .	379
1. Outline of the Method . . . . .	379
2. Choice of the Basis Generating Potential . . . . .	381
a. General considerations and vibrational averaging . . . . .	381
b. Infinite-well basis sets . . . . .	383
c. Single- <i>l</i> basis sets . . . . .	384
D. The Adiabatic or BOARS Approximation . . . . .	385
E. Treatment of Quasibound and Metastable Levels . . . . .	387
F. Discussion and Conclusions . . . . .	389
IV. Analysis of Spectral Data . . . . .	392
A. Modelling the Potential Energy Surface . . . . .	392
1. General Considerations . . . . .	392
2. Long Range (in <i>R</i> ) Behaviour . . . . .	393
3. Diatom Stretching Dependence and the Collapsed-Diatom Limit . . . . .	394
B. Least-Squares Fitting Procedure . . . . .	396
C. Correlation Effects and the Choice of Fitting Parameters . . . . .	398
V. Potential Energy Surfaces Determined from Bimer Spectra . . . . .	399
A. Molecular Hydrogen-Inert Gas Complexes . . . . .	399

1. Spectroscopic Potential Energy Surfaces . . . . .	399
2. Tests of the Spectroscopic Potentials . . . . .	408
B. Isotopic Ar-HCl. . . . .	411
VI. Concluding Remarks . . . . .	414
Acknowledgements . . . . .	415
References . . . . .	416

# SCATTERING OF NON-SPHERICAL MOLECULES

HANSJÜRGEN LOESCH

*Fakultät für Physik, der Universität Bielefeld, 4800 Bielefeld,  
West Germany*

## CONTENTS

I. Introduction . . . . .	422
II. Theoretical Remarks . . . . .	424
A. Potential Hypersurfaces . . . . .	424
B. Scattering Theory . . . . .	429
III. Experimental Methods . . . . .	434
A. An Ideal Scattering Experiment . . . . .	435
B. Cross Sections . . . . .	438
C. Experimental Components . . . . .	439
1. State Analysers and Selectors . . . . .	439
2. Detectors . . . . .	441
3. Velocity Selectors and Analysers . . . . .	442
4. Beam Sources . . . . .	443
D. Experimental Determination of Cross Sections . . . . .	446
1. Completely Specified Cross Sections . . . . .	446
2. Oriented Cross Sections . . . . .	447
3. State-to-State Cross Sections . . . . .	449
a. The velocity-change method . . . . .	449
b. State-selective method . . . . .	453
4. Total Cross Sections . . . . .	453
IV. Cross Sections and Anisotropy . . . . .	454
A. Scattering from Isotropic Potentials . . . . .	454
B. Total Cross Sections . . . . .	457
C. State-to-State (Energy Transfer) Cross Sections . . . . .	461
D. Oriented Cross Sections . . . . .	470
1. Cross-Section Anisotropy . . . . .	470
2. $m$ -Transitions . . . . .	472
V. Experimental Results . . . . .	473
A. Hydrogenic Systems . . . . .	473
B. Alkali Halide Systems . . . . .	479
C. Alkali Hydrides . . . . .	482
D. Hydrogen Halides . . . . .	482
E. Other Diatomic Molecules . . . . .	483
