# MOLECULAR PROPERTIES OBSERVED AND COMPUTED

L. ENGELBRECHT AND JUERGEN HINZE

*Fakultät für Chemie  
Universität Bielefeld  
Bielefeld, Germany*

## CONTENTS

I. Introduction	1
II. Adiabatic Separation	3
III. The Electronic Equation	5
IV. Symmetry—Internal Coordinates	10
V. The Equation for Nuclear Motion	19
VI. Spectroscopic Constants	24
VII. Outline of the Theoretical Method	35
VIII. Effective Operators and Effective Constants	43
IX. Computation of Molecular Properties	103
Appendix 1. The Molecular Hamiltonian	109
Appendix 2. Coupling and Recoupling Coefficients	121
Appendix 3. Relations between Real and Complex Notation Used Herein	124
Appendix 4. List of Symbols	130
References	137

# GENERALIZED LANGEVIN EQUATIONS AND MANY-BODY PROBLEMS IN CHEMICAL DYNAMICS

S. A. ADELMAN\*

*Department of Chemistry  
Purdue University  
West Lafayette, Indiana*

## CONTENTS

I. Introduction	143
II. Theory of Generalized Brownian Motion	145
III. Gas-Solid Collisions: A Case Study in Many-Body Chemical Dynamics	219
Appendix 1	240
Appendix 2	244
Appendix 3	245
Appendix 4. Gaussian Probability Distribution Functions	246
Appendix 5	250
References	251

# **EXPERIMENTAL AND THEORETICAL STUDIES OF ROTOTRANSLATIONAL CORRELATION FUNCTIONS**

**MYRON EVANS AND GARETH EVANS**

*Department of Chemistry  
University College of Wales  
Aberystwyth, Wales*

**RUSSELL DAVIES**

*Department of Applied Mathematics  
University College of Wales  
Aberystwyth, Wales*

## **CONTENTS**

<b>I. General Introduction. Theoretical and Experimental Background</b>	<b>259</b>
<b>II. Evaluation of Models of Fluid-State Molecular Dynamics</b>	<b>337</b>
<b>III. Machine Simulations of Rotational and Translational Correlation Functions</b>	<b>400</b>
<b>IV. Induced Zero-THz Absorptions and Rotation/Translation of Molecules</b>	<b>444</b>
<b>References</b>	<b>478</b>

# ON A THEORETICAL DESCRIPTION OF SOLVATED ELECTRONS

A. M. BRODSKY AND A. V. TSAREVSKY

*Institute of Electrochemistry  
Academy of the Sciences of the U.S.S.R.  
Leninsky prospekt, 31,  
Moscow, V-71, U.S.S.R.*

## CONTENTS

I. Introduction	483
II. Theoretical Models of the Structure and Optical Spectra of Solvated Electrons	486
III. Transport Properties	507
IV. Analysis of Optical Spectra of Solvated Electrons with the Help of Nonmodel Relationships	514
V. Determination of the Thermodynamic Characteristics of Solvated Electrons	535
VI. Conclusions	537
Appendix	538
References	540

# NATURAL CHIROPTICAL SPECTROSCOPY: THEORY AND COMPUTATIONS

AAGE E. HANSEN

*Department of Physical Chemistry  
H. C. Ørsted Institute  
University of Copenhagen  
Copenhagen, Denmark*

THOMAS D. BOUMAN

*Department of Chemistry  
Southern Illinois University  
Edwardsville, Illinois*

## CONTENTS

I.	Introduction	546
II.	Ordinary and Rotatory Electronic Intensities	548
	A. Momentum Formulation	
	B. Multipole Formulation	
	C. Alternative Formulation	
	D. Comments	
III.	Band Shapes and Integrated Intensities	555
	A. Non-degenerate Transitions	
	1. Cases I, II, and III	
	2. Integrated Intensities	
	3. Isotopic Substitution	
	B. Degenerate Excitations	
	1. Accidental Degeneracy and Interference	
	2. Molecular Exciton Systems	
	C. Comments	
IV.	General Properties of the Integrated Intensities	575
	A. Symmetry Considerations	
	B. Sum Rules	
	C. Origin Dependence	
V.	Correlations with Molecular Structure	581
	A. Achiral Chromophores	
	B. Chirality Functions	

C.	Molecular Excitons	
1.	Helical Polymers	
2.	Dimeric Systems	
VI.	Other Chiroptical Phenomena	595
A.	Circularly Polarized Luminescence	
B.	Vibrational Circular Dichroism	
C.	Magnetic Circular Dichroism	
VII.	Computation of Electronic Transition Moments	601
A.	State Approach	
B.	Excitation Approach; Random Phase Approximation	
C.	Random Phase Approximation for Molecular Excitons	
D.	Remarks on Computation	
VIII.	Computed Chiroptical Properties	620
A.	Chiral Chromophores	
B.	Achiral Chromophores	
C.	Coupled Chromophore Systems	
D.	Comments	
	References	636
