ANALYSIS AND EVALUATION OF IONIZATION POTENTIALS, ELECTRON AFFINITIES, AND EXCITATION ENERGIES BY THE EQUATIONS OF MOTION— GREEN'S FUNCTION METHOD

MICHAEL F. HERMAN

Department of Chemistry
Columbia University
New York, New York

KARL F. FREED

The James Franck Institute and the Department of Chemistry
The University of Chicago
Chicago, Illinois

AND

D. L. YEAGER

Department of Chemistry
Texas A & M University
College Station, Texas

CONTENTS

I. Introduction 2
II. Theory 8
A. Derivation of the EOM Equations 8
1. Primitive EOM Equations 9
2. Double Commutator EOM Equations 10
3. Hermitian Equations for Approximate Calculations 13
4. Motivation for Double Commutator Equations 13
5. Iterative Improvement of Approximate Ground-State Wave Functions 15

B. Linear Independence of Basis Operators with Respect to EOM Equations 16
C. Operator Basis Sets Used in Calculations 18
D. Approximations 22
1. The Ground-State Wave Function 22
2. Partitioning Theory and Approximating the Contribution of Q-Space 24
E. Choice of the Primary Space for Ionization Potentials 26
F. Relationship of the EOM Method with an Expanded P-Space to Diagrammatic Green's Function Theory 29
III. Numerical Studies 31
A. Differences Between Simons' and Yeager's EOM Calculations 31
B. Basis Set Dependence of Calculated Ionization Potentials for N_2 34
C. Third-Order Results and the Breakdown of the Perturbation Expansion 36
D. Calculation of the Shake-Up X-Ray Photoelectron Spectroscopy Spectrum of N_2 42
E. Extended EOM Calculations and Comparison with Configuration Interaction Results 49
1. Ionization Potential of BH 52
2. Ionization Potential of HF and Electron Affinity of OH 53
3. Ionization Potential of Ne and Electron Affinity of F 53
4. Analysis of Calculations 54
5. Comparisons with Experiment 55
F. Consideration of a Number of Lingering Difficulties 55
1. Unorthodox Basis Operators 56
2. Employing a Multiconfigurational Zeroth-Order Ground State 58
3. Iterative Procedure to Improve an Approximate Ground State 59
IV. Conclusions 61
Appendix 63
Acknowledgments. 66
References 66

KINETIC THEORY OF CHEMICAL REACTIONS IN LIQUIDS

RAYMOND KAPRAL

Department of Chemistry
University of Toronto
Toronto, Ontario, Canada

CONTENTS

I. Introduction 72
II. Chemical Rate Laws and Rate Coefficients 73
III. Conventional Approaches 77
A. Simple Diffusion Equation 77
B. Smoluchowski Equation 80
C. Fokker-Planck and Langevin Equations. 82
IV. Microscopic Specification of Species in a Reacting System 84
V. Correlation Function Expressions for Rate Coefficients 88
VI. Microscopic Model of a Reacting Liquid 94
A. Examples 94
B. Mathematical Description 96
C. Structure of the Rate Kernel 101
VII. Kinetic Equations 105
A. Background 105
B. General Theory 108
C. Singlet Field Equation 115
D. Pair Kinetic Equation 120
E. The BGK Equation 123
VIII. Kinetic Theory Expression for the Rate Kernel 125
IX. Configuration Space Equations 127
A. Projection onto Pair Configuration Space 127
B. Smoluchowski Equation and Diffusion Tensor 130
C. Sink Smoluchowski Equation 136
D. Rate Kernel via Pair Theory 138
X. Analysis of the Rate Kernel 139
A. Dynamic Processes Contributing to the Rate Kernel 139
B. Projection onto Diffusion Modes 143
C. Contributions from Nonhydrodynamic States 147
XI. Initial Condition Effects 149
XII. Applications 152
A. Atom Recombination 154
B. Isomerization 160

XIII. Conclusions. 161
Appendix A. Smoluchowski Equation Result for the Rate Kernel 162
Appendix B. Field Point Formulation and General Properties 164
Appendix C. Derivation of the Singlet Kinetic Equation 167
Appendix D. Pair Kinetic Equation 173
Appendix E. Diffusion Eigenfunction and Integral Equation Solution 175
Acknowledgments 177
References 178

DIELECTRIC CONSTANTS OF FLUID MODELS: STATISTICAL MECHANICAL THEORY AND ITS QUANTITATIVE IMPLEMENTATION

G. STELL

Departments of Mechanical Engineering and Chemistry
State University of New York
Stony Brook, New York

G. N. PATEY

Department of Chemistry
University of British Columbia
Vancouver, British Columbia, Canada

AND

J. S. HØYE

Institutt for Teoretisk Fysikk
Universitetet i Trondheim
Trondheim, Norway

CONTENTS

I. Introduction 185
II. Polar-Nonpolarizable Fluids: Theory in the Context of the Høye-Stell Formulation. 187
A. Exact Expressions for ε for Rigid Polar Molecules in Terms of the Pair Correlation Function 188
B. Core-Parameter Extension of the Expression for ε, and γ Parameterization 201
C. Three Approximations on the Two-Particle Level 206
D. The $\gamma \to 0$ Limits 209
E. Higher Order Approximations Based on γ Ordering 213
F. Other Extensions of the Lowest-Order γ-Ordered Results 223

III. Polar-Nonpolarizable Fluids: Alternative Formulations, Quantitative Results, and Computer Simulations 229
A. Models and Formal Relationships 229
B. Integral Equation Theories 232
1. The Mean Spherical Approximation 232
2. Beyond the MSA: Cluster Series Expansion and Generalized Mean Spherical Approximations 237
3. The Linearized and Quadratic Hypernetted-Chain Approximations 238
4. A Perturbation Expansion of the HNC Equation 244
C. Computer Simulations 245
1. Periodic Boundary Conditions 246
The Spherical Cutoff and Minimum Image Methods 246
Truly Periodic Boundary Conditions 249
The Mean Reaction Field Method 253
2. Nonperiodic Boundary Conditions 253
D. Quantitative Results 254
1. The Pair Correlation Function 254
Dipolar Hard Spheres and Stockmayer Particles 254
Hard Spheres with Dipoles and Quadrupoles 261
2. The Dielectric Constant 262
Dipolar Hard Spheres and Stockmayer Particles 262
Hard Spheres with Dipoles and Quadrupoles 269
Real Liquids 271
IV. Polar-Polarizable Fluids 273
A. Models and Formally Exact Expressions 273
1. Constant-Polarizability Results 276
2. Fluctuating-Polarizability Model 279
B. Implementation of Wertheim's SSCA for Polar-Polarizable Fluids with Constant Polarizability 283
C. Implementation of the Høye-Stell Results for Polar-Polarizable Fluids with Fluctuating Polarizability 288
D. The Case of Nonpolar Polarizable Fluids 290
E. Critical Properties of ϵ 295
1. The Nonpolar Case 295
2. The Dipolar Case 301
V. Electrolyte Solutions: The Solute-Dependent Dielectric Constant 303
A. Simple Models for Ionic Systems 304
B. Integral Equation Theories 305
1. The Mean Spherical Approximation 305
2. The LHNC and QHNC Approximations 308
C. The Solute-Dependent Dielectric Constant 309
1. Formal Relationships 309
2. Quantitative Results 312
VI. Things to Come 314
Appendix A. Use of Test Charges 317
Appendix B. Explicit Expressions for the Rotational Invariants 318
Appendix C. The $B^{mnl}(r)$ for Dipole-Quadrupole Systems 319
Appendix D. The Derivation of (5.23), (5.24), and (5.25) 321
Acknowledgments 323
References 323

LIGHT SCATTERING FROM THIN LIQUID FILMS

A. VRIJ, J. G. H. JOOSTEN, AND H. M. FIJNAUT

Van't Hoff Laboratory University of Utrecht
Utrecht, The Netherlands

CONTENTS

I. Introduction 330
A. Interaction Forces 331
1. Van der Waals–London Forces 332
2. Electrostatic Forces 332
B. Thin Films as They Occur in Nature or Practice 332
C. Experimental Methods 333
II. Thin Liquid Films 334
A. Soap Film Structure 335
B. Electric Double Layer Repulsion Forces 336
C. Long-Range van der Waals–London Forces 338
1. Van der Waals Forces Between Molecules 338
2. Van der Waals–London Forces Between Macroscopic Particles 339
3. Macroscopic Theory of Dispersion Forces 339
D. Combination of Electrical Double Layer and van der Waals–London Forces 340
III. Light Scattering from Liquid Surfaces 341
A. Description of Surface Corrugations 342
B. Surface Light Scattering 344
IV. Light Scattering from Thin Liquid Films 346
A. Interference of Light Waves in the Film 347
B. Scattered Intensity for Films without Long-Range Interaction Forces: Bending and Squeezing Modes 350
C. Influence on the Scattering of a Monolayer of Soap Molecules and of the Bulk of the Film 352
D. Influence of Long-Range Interaction Forces on the Surface Scattering in Thin Films 352
1. Surface Fluctuations in Thin Liquid Films 352
2. Some Early Experimental Observations 354
3. Instability Regions in Films 355
V. Dynamics of Film Fluctuations 356
A. Introduction 356
B. Hydrodynamics of Free Films 357
1. Hydrodynamic Equations 357
2. Boundary Conditions 360

3. Dispersion Relations 361
4. The Long-Wavelength Limit 362
5. Comparison with Other Theories 364
6. Discussion 365
VI. Time-Averaged Light-Scattering Experiments on Liquid Films 367
A. Introduction 367
1. Apparatus 367
2. Materials 368
3. Measurement of the Film Thickness 368
4. Scattering Measurement 368
B. Electrical Double Layer Forces 369
C. Van der Waals–London Interactions 373
1. Measurements 373
2. Results and Discussion 374
VII. Dynamic Light-Scattering Experiments from Free Films 376
A. Introduction 376
1. Correlation Functions and Power Spectra. 377
B. Experiments 380
1. Experimental Setup 380
2. Materials and Methods 382
C. Experimental Results 383
1. Squeezing Mode 383
2. Squeezing Mode: Drainage Experiments 384
3. Squeezing Mode: Equilibrium Experiments 386
4. Bending Mode 387
D. Discussion 390
Acknowledgments 392
