LASER-INDUCED FLUORESCENCE: ELECTRONICALLY EXCITED STATES OF SMALL MOLECULES

THE LATE MICHAEL A. A. CLYNE

*Department of Chemistry, Queen Mary College,
Mile End Road, London E1 4NS, UK*

AND

I. STUART McDERMID

*Molecular Physics and Chemistry Section, Jet Propulsion
Laboratory, California Institute of Technology,
4800 Oak Grove Drive, Pasadena, CA 91109, USA*

CONTENTS

I. Introduction	2
A. Atomic Resonance Fluorescence	3
B. Linewidth Considerations	4
C. Oscillator Strength and Lifetime of an Atomic Transition	5
D. Electric Dipole Moment and Lifetime of a Molecular Transition	6
E. Scope of This Review	7
II. Experimental Aspects: Frequency and Bandwidth Control of Pulsed Lasers in the Visible and Ultraviolet	7
A. Pulsed Tunable Dye Laser	7
B. Narrow Spectral Bandwidth Output	11
C. Oscillator-Amplifier Systems	14
D. Pump Sources	15
E. Frequency Doubling and Mixing	17
F. Stimulated Raman Scattering	19
III. Laser-Induced Fluorescence Studies of the Diatomic Halogens and Interhalogens	21
A. Iodine, I_2	24
B. Bromine, Br_2	29
C. Chlorine, Cl_2	33
D. Iodine Monobromide, IBr	40
E. Iodine Monochloride, ICl	44
F. Bromine Monochloride, $BrCl$	48
G. Iodine Monofluoride, IF	52
H. Bromine Monofluoride, BrF	58
I. Chlorine Monofluoride, ClF	62
J. Summary	65

IV.	Laser-Induced Fluorescence Studies of Selected Free Radicals	66
A.	CO $a^3\Pi$ Metastables	66
B.	SnO Transient Molecules	69
C.	BO Radicals	75
D.	The PO Free Radical	84
E.	The SO Free Radical	87
V.	State-to-state reaction dynamics	91
	References	98

INFRARED MULTIPHOTON EXCITATION AND DISSOCIATION

DAVID S. KING

*National Bureau of Standards, Division of Molecular Spectroscopy,
Washington, DC 20234, USA*

CONTENTS

I. Introduction	105
II. Theoretical Considerations	108
A. General Approach	108
B. Experimental Counterpart	110
C. Basic Theory	111
D. Consequence and Prediction	115
1. Single-Quantum Exchange	115
2. Restricted Intramolecular Vibrational Relaxation	118
3. Reactant Energy Distribution	122
4. Optoacoustic Signals	122
III. Excitation in Region I	124
IV. Excitation Through the Quasicontinuum	134
V. Competitive Processes in Region III	142
VI. Product State Distributions	151
A. Translational Energy Distributions	158
B. Vibrational Distributions	162
C. Total Product Energy Distribution	167
1. Vibrational Energy	167
2. Rotational Energy	170
3. Translational Energy	170
D. A Case of Pseudoselectivity	174
E. A Test of Statistical Theories of Unimolecular Reaction as Applied to MPD	178
VII. Summary	181
Acknowledgements	182
Appendix: Details of the CF ₂ CFCI and CF ₂ HCl Experiments	182
References	185
Note	189

THE PHOTON-AS-CATALYST EFFECT IN LASER-INDUCED PREDISSOCIATION AND AUTOIONIZATION

ALBERT M. F. LAU

*Corporate Research Science Laboratories,
Exxon Research and Engineering Company,
PO Box 45, Linden, NJ 07036, USA*

CONTENTS

I. Introduction	192
A. General Remarks	194
B. Organization of this Chapter	199
II. Quantum Theory of Photon-Catalysed (PC) Decompositions	200
A. Non-Resonant PC Decomposition and Interference with Natural Decomposition	203
B. Selection Rules for the Photon-as-Catalyst Effect (PCE) and New Transition Channels	205
C. Resonant PC Decomposition	206
D. Coherent Saturation	213
E. Resonance Enhancement	216
F. Optimization of the Fragment Yield by Lifetimes	217
G. Far Off-Resonance	218
III. Rotational Transition Strengths for PC Predissociation	220
IV. Examples of PC Decompositions	227
A. PC Predissociation of the Alkali-Metal Diatoms	227
B. PC Predissociation of Halogen Diatoms: I_2	228
C. PC Autoionization of Alkali Atoms	234
V. Semiclassical Theory of PCE in Molecules	235
A. A Simple Theory	236
B. PC Transition at a Curve Crossing	237
C. Field-Induced Avoided Crossing	239
D. PCE-Modified Dissociation: Alkali Halides	240
E. A Semiclassical Formula for PC Predissociation	241
F. Other Aspects	242
VI. Summary	243
Acknowledgements	244
Appendix A	245
Appendix B	248
References	250

PHOTOFRAGMENT DYNAMICS

STEPHEN R. LEONE

*Joint Institute for Laboratory Astrophysics, National Bureau of Standards
and University of Colorado; and Department of Chemistry, University of
Colorado, Boulder, CO 80309, USA*

CONTENTS

I. Introduction	256
II. Experimental Techniques	258
A. UV Dissociation, Fragment Fluorescence	258
B. Molecular Beam Photofragmentation: Time-of-Flight (TOF) and Angular Distributions	259
C. Quantum Yield Measurements	262
D. Laser-Induced Fluorescence	264
E. Polarized Photofluorescence Spectroscopy	267
F. Photofragmentation of Vibrationally Excited Molecules	268
G. Spectrally Resolved Infrared Fluorescence	271
H. Multiphoton Dissociation	272
I. Photofragmentation Lasers	274
III. Theoretical Description of the Photofragment Process	275
A. Photoejection Dynamics	276
B. Dynamical Theories of Photofragmentation	279
C. Potential Surfaces	282
IV. Specific Systems	283
A. H ₂	284
B. Halogens and Interhalogens	284
C. O ₂	289
D. Na ₂ , K ₂ , and Rb ₂	290
E. Diatomic Metal Halides	290
F. HCN, XCN, and Other CN-Containing Compounds	292
G. H ₂ O, H ₂ S, and Other OH-Containing Compounds	298
H. O ₃	300
I. CO ₂ , CS ₂ , OCS, and OCSe	302
J. SO ₂ , N ₂ O, NO ₂ , NOCl, and Other NO-Containing Compounds	304
K. Metal Halides and Organometallic Compounds	306
L. Alkyl and Aryl Halides and Fluorinated Analogues	309
M. NH ₃ , PH ₃ , and Other NH-Containing Compounds	312
N. Three-Body Dissociation: CH ₃ COI, CF ₃ COI, and s-Tetrazine	313
O. Formaldehyde, Ketene, Glyoxal, and Others	314
P. Van der Waals' Molecules	316
Acknowledgements	316
References	316

COLLISIONAL QUENCHING OF ELECTRONICALLY EXCITED METAL ATOMS

W. H. BRECKENRIDGE AND H. UMEMOTO

*Department of Chemistry, University of Utah,
Salt Lake City, UT 84112, USA*

CONTENTS

I. Introduction	326
II. Data on Metal Atom Excited States	331
III. Absolute Quenching Cross Sections	332
A. Entrance-Channel Control	344
B. Exit-Channel Control	352
IV. Exit Channels for Electronic Energy Dissipation	354
A. N ₂ and CO	355
B. NO	356
C. O ₂	357
D. CO ₂	358
E. N ₂ O	358
F. H ₂ and D ₂	359
G. Alkane Hydrocarbons	364
H. Unsaturated Hydrocarbons	365
I. Halogens and Halogen-Containing Species	367
J. Quenching Molecules for which Exciplex Emission is a Major Exit Channel	368
V. Quantum-State Distributions of Energy in Specific Exit Channels	369
A. Electronic-to-Vibrational Energy Transfer	370
1. Na(² P) + CO	370
2. Na(² P) + N ₂	371
3. Na(² P) + NO	371
4. Na(² P) + O ₂	372
5. Na(² P) + H ₂ , D ₂	372
6. Na(² P) + polyatomic molecules	373
7. Hg(³ P ₀) + NO	373
8. Hg(³ P ₀) + CO	373
9. Hg(³ P ₁) + CO, N ₂ , NO	374
B. Product Atomic Electronic States in Electronic-to-Vibrational Energy Transfer	375
C. Electronic Energy Transfer	379
D. Chemical Reaction	382

VI. Concluding Remarks.	384

REACTION DYNAMICS AND STATISTICAL MECHANICS OF THE PREPARATION OF HIGHLY EXCITED STATES BY INTENSE INFRARED RADIATION

MARTIN QUACK

*Institut für Physikalische Chemie der Universität, Tammannstrasse 6,
D-3400 Göttingen, West Germany*

CONTENTS

I. Introduction	396
II. The Excitation of Polyatomic Molecules by Intense Infrared Radiation	398
A. Excitation with Monochromatic, Coherent Radiation	399
1. Exact Treatment	399
2. Quasiresonant or Rotating-Wave Approximation	401
3. The Time Dependence of the Statistical Matrix and of State Populations	405
B. Excitation with Incoherent Radiation	407
1. Quasimonochromatic, Incoherent Radiation	407
2. Thermal Radiation	408
C. Measurable Quantities and Experimental Coarse Graining.	409
III. Statistical Mechanics of the Coherent Excitation of Polyatomic Molecules	413
A. Statistics, Dynamics, Mathematics	415
B. The Pauli Equation	418
1. Derivation	418
2. Discussion	420
3. Quantum-Mechanical Trajectories	422
4. The Golden Rule for the Decay of a Single Initial State.	427
C. The Statistical Mechanics of Case C and Case D	429
1. Case C (Low-Intensity Irradiation)	430
2. Case D (High-Intensity Irradiation)	431
3. Coarse-Grained Quantum-Mechanical Trajectories for Coherent Optical Excitation as a Function of Radiation Intensity	432
4. Unified Treatment of Case B and Case C	436
5. Coupling the Schrodinger Equation to Master Equations	437
D. Spectral Structures and Practical Rate Coefficients	439
E. Alternative Treatments of the Infrared Excitation	443
1. Treatments Based upon the Solution of the Classical Equations of Motion	443

2. Treatments Based upon the Solution of Simplified Quantum Models	444
3. Treatments Based upon the Optical Excitation of One IR-Active Vibration Weakly Coupled to Other Degrees of Freedom	445
4. Rate Equation Treatments	447
IV. The Statistical Theory of Specific Rate Coefficients for Unimolecular Dissociation	448
V. Solutions of the Statistical-Mechanical Equations of Motion	450
A. The Basic Mechanism of Multiphoton Excitation and Reaction in Polyatomic Molecules	452
B. Steady State.	455
C. Level Populations as a Function of Time and Intensity	456
D. Time- and Intensity-Dependent Rate Coefficients and Product Yields	456
VI. Experiment and Theory	458
A. Qualitative Mechanistic Evidence	460
1. Intensity, Fluence, and Delay Phenomena	460
2. Intrinsic Nonlinear Intensity Dependence	460
3. Intramolecular Relaxation: Product Translational Energy Distributions	461
4. Intramolecular Relaxation: Bond-Specific Chemistry	461
B. Quantitative Evidence	462
1. Rate-Coefficients for URIMIR	462
2. The Road Ahead	465
Acknowledgements	465
Appendix: The Calculation of the Exponential Function of Square Matrices	466
References	467

‘Schon jetzt führt jede Untersuchung über die Struktur einer physikalischen Theorie unvermeidlich auf die Frage nach der Natur der Wahrscheinlichkeitshypothesen.’

P. Ehrenfest and T. Ehrenfest (1911)

PROGRESS IN ELECTRONIC- TO-VIBRATIONAL ENERGY TRANSFER

I. V. HERTEL

*Institut für Molekulphysik, Fachbereich Physik der Freien Universität Berlin,
Arnimallee 14, 1000 Berlin 33, West Germany*

CONTENTS

I. Introduction	475
II. Quenching Cross Sections and the Ionic Intermediate	477
A. Experimental Findings	477
B. Earlier Theoretical Interpretations	479
III. Measurements of the Energy Distribution After Quenching	482
A. Spectroscopic Studies	483
B. Crossed-Beam Experiments	486
C. Electronic Excitation by Inverse Quenching (V, R, T-E Transfer)	489
IV. Potential Energy Surfaces and the Bond-Stretch Attraction	490
A. <i>Ab Initio</i> Surface Computations	490
B. Simple Model for the Magnitude of the Quenching Cross Section	496
C. Scattering Dynamical Calculations	497
D. The Bond-Stretch Attraction and the 'Ionic Intermediate'	500
V. Angular Distributions and Other New Data	503
A. Angular Dependence of the Differential Quenching Cross Section	503
B. Triatomic and Polyatomic Quenching Molecules	507
C. Polarization Studies	509
D. Energy Oscillations in the Ar* + N ₂ E-V Transfer Reaction	510
VI. Conclusion	512

THE CALCULATION OF POTENTIAL ENERGY SURFACES FOR EXCITED STATES

DAVID M. HIRST

*Department of Chemistry and Molecular Sciences, University of Warwick,
Coventry CV4 7AL, UK*

CONTENTS

I. Introduction	517
II. Methods for the Calculation of Potential Energy surfaces	519
A. <i>Ab Initio</i> Methods	520
1. The Self-Consistent Field Molecular Orbital (SCFMO) Method	520
2. The Generalized Valence Bond Method	524
3. Configuration Interaction	525
4. The Multiconfiguration SCF Method (MCSCF)	530
5. Valence Bond Methods	532
6. Many-Body Perturbation Theory	533
7. Pair Correlation Methods	534
B. Semitheoretical Methods	536
1. Pseudopotentials and Effective Core Potentials	536
2. Local Density Methods	541
C. Semiempirical Methods, Diatomics-in-Molecules	543
D. Empirical Methods	545
III. Calculated Potential Curves for Diatomic Molecules	547
A. H_2 , HeH , He_2 , and Their Ions	547
B. Hydrides	549
C. Homonuclear Molecules	552
D. Heteronuclear Molecules	557
E. Diatomic Molecules Containing a Rare-Gas Atom	561
IV. Calculated Potential Surfaces for Triatomic Molecules	565
A. H_3	565
B. AH_2 Molecules	566
C. HAB Molecules	570
D. ABC Molecules	573
