STATISTICAL MECHANICS OF POLYMER SOLUTIONS AND POLYMER ADSORPTION

STUART G. WHITTINGTON

*Department of Chemistry,
University of Toronto,
Toronto, Canada*

CONTENTS

I.	Introduction	1
II.	Polymer Solutions	5
	A. General	5
	B. Rigorous Results on Self-Avoiding Walks	6
	C. The Magnetic Analogy	14
	D. Universality	20
	E. Scaling Arguments and Concentration Regimes	25
III.	Polymers in Restricted Environments	28
	A. Polymers in Slits and Tubes	28
	B. The Half-Space Problem	35
	C. Polymer Adsorption at a Plane Surface	39
IV.	Discussion	44
	References	44

THEORY OF COLLISION-INDUCED LINE SHAPES—ABSORPTION AND LIGHT SCATTERING AT LOW DENSITY

G. BIRNBAUM

*National Bureau of Standards
Washington, D.C. 20234*

and

B. GUILLOT and S. BRATOS

*Université Pierre et Marie Curie
Paris, France*

CONTENTS

I.	Introduction	50
II.	General Relations in Collision-Induced Absorption	52
III.	Collision-Induced Translational Absorption in Rare Gas Mixtures	56
	A. General Considerations	56
	B. Exact Quantum and Classical Calculations	58
	C. Approximate Dynamical Methods	63
	D. Model Correlation Functions	69
IV.	Collision-Induced Absorption in Molecular Gases	71
	A. General Considerations	71
	B. Rotational–Translational Band Shapes	74
	C. Translational Shapes from Dynamical Models	79
	D. Models for the Spectral Density, Correlation Function, and Memory Function	80
	E. Interference between Allowed and Induced Dipoles	84
V.	Collision-Induced Light Scattering	84
	A. Comparison of Translational Absorption and Depolarized Light Scattering	84
	B. General Relations	86
VI.	Line Shapes in Collision-Induced Light Scattering	89
	A. Exact Quantum and Classical Calculations of the Translational Spectrum	89
	B. Approximate Dynamical Methods	99

C.	Model Correlation and Memory Functions, Molecular Dynamics	102
D.	Collision-Induced Vibrational–Rotational Raman Spectra	106
VII.	Summarizing Remarks and Conclusions	107
	References	109

GENERALIZATIONS OF THE ENTROPY CONCEPT: PRINCIPLES, LIMITATIONS, AND PROSPECTS FOR APPLICATIONS

C. ALDEN MEAD

*Institut für Theoretische Physik, Rheinisch-Westfälische Technische
Hochschule Aachen, 5100 Aachen, West Germany*

and

*Chemistry Department, University of Minnesota,
Minneapolis, Minnesota 55455[§]*

I.	Introduction	114
II.	Fundamental Properties of Mixing Character and Distance	117
	A. Intuitive Considerations	117
	B. Convex Functions and Bistochastic Matrices	119
	C. Equivalent Definitions of Mixing Character	121
	D. The Quantum Case	126
	E. Connection with Time Development of Irreversible Processes	127
	F. System in Contact with Bath; Mixing Distance	130
	G. Comparison with the Concept of Mixing in Ergodic Theory	135
III.	Special Properties of Entropy	136
	A. Additivity and Subadditivity	136
	B. Nonlinear Evolution Equation	139
	C. Information Theoretic Interpretation; Jaynes Prescription	143
	D. Conclusions	145
IV.	The η -Theorem	146
	A. Preliminaries	147
	B. Power Functions	148
	C. Angle Functions	150
	D. Error Incurred in Jaynes Prescription	154
	E. Restrictions	155
V.	Examples and Applications	157
	A. Diffusion in Ideal Solution	157
	B. Correlations	159
	C. Systems with Two Degrees of Freedom	161
	D. Chemical Reactions in Ideal Gases; An Example of Case (b)	166
VI.	Conclusion	168
	Acknowledgments	168

[§]Present address.

SENSITIVITY ANALYSIS AND ITS ROLE IN QUANTUM SCATTERING THEORY

LARRY ENO AND HERSCHEL RABITZ

*Department of Chemistry,
Princeton University,
Princeton, New Jersey 08544*

CONTENTS

I.	Introduction	177
II.	Elementary Sensitivity Coefficients	180
A.	Evaluation	180
a.	Exact Dynamics	181
b.	Approximate Dynamics	185
B.	Applications	187
a.	Potential Parameters	188
b.	Asymptotic Parameters	194
III.	Derived Sensitivity Coefficients	199
A.	Evaluation	199
B.	Applications	201
IV.	Feature Sensitivity Analysis	206
V.	Global Parameter Scaling	212
VI.	Observables as Real Data	217
VII.	Conclusion	223
	Acknowledgments	225
