NEW EXPERIMENTAL STUDIES OF THE STRUCTURE OF FLUIDS

P. A. EGELSTAFF

*Physics Department
University of Guelph
Guelph, Ontario, N1G 2W1, Canada*

CONTENTS

I.	Introduction	1
II.	Experimental Methods	3
	A. X-Ray and γ -Ray Diffraction	3
	B. Slow-Neutron Diffraction	6
III.	Atomic Fluids	12
	A. Argon	13
	B. Krypton	16
IV.	Homonuclear Diatomic Fluids	21
	A. Nitrogen	23
	B. Chlorine	26
V.	Hydrogenous Fluids	29
	A. Hydrogen Chloride	30
	B. Water	33
VI.	Discussion	44
	Appendix A: Critical Review of Inelasticity Corrections	48
	Appendix B: Truncation Effects in Fourier Transformations	54
	References	58

CHEMICAL REACTION DYNAMICS IN LIQUID SOLUTION

STEVEN A. ADELMAN*

*Department of Chemistry
Purdue University
West Lafayette, Indiana 47907*

CONTENTS

I.	Introduction	63
II.	Glossary of Symbols	70
III.	Basic Concepts	74
	A. The Harmonic Chain, a Model Many-Body System	74
	B. The Dissipative-Stochastic Character of Primary-System Motion	76
	C. The Velocity Autocorrelation Function	77
	D. The Langevin Model	81
	E. Short-Time-Scale Many-Body Dynamics	87
	F. The MTGLE Representation	89
	1. Basic Results	89
	2. MTGLE Hierarchy	93
	3. The Adiabatic Limit and the Langevin Model	94
	4. The Equivalent Harmonic Chain	96
	G. Heatbath Modeling	98
	H. Atom-Chain Collisions: A Prototype for Problems in Condensed-Phase Chemical Dynamics	101
	I. Model Treatment of Atomic Recombination Dynamics in Liquid Solution	106
	J. The Clamping Approximation and the Common-Cage Effect	111
IV.	Statistical Mechanics	116
	A. Some Results from the Equilibrium Theory of Liquids	117
	1. Pair Correlation Functions	117
	2. The Ornstein-Zernike Equation	118
	3. Simple Closures of the OZ Equation	120
	4. The Percus-Yevick Approximation	124
	B. Some Topics from the Formal Theory of Irreversible Processes	124
	1. Time Evolution of Dynamical Variables	125
	2. Liouville Space	126
	3. Time Correlation Functions	128
	4. The Liouville Equation	129

*John Simon Guggenheim Memorial Fellow 1982-1983.

5.	Perturbation Theory	131
6.	Linear-Response Theory	132
7.	Generalized Langevin Equations: The Response-Function Method	138
8.	Generalized Langevin Equations: The Projection-Operator Method	143
V.	Rigorous Formulation of the MTGLE Representation of Irreversible Dynamics	148
A.	The Normalized Velocity Autocorrelation Function	150
B.	MTGLE Hierarchy for Response Functions	151
1.	Einstein Frequency and Coupling Constant	151
2.	The Normalized Heatbath Response Function $\dot{\theta}_1(t)$	152
3.	Response-Function Hierarchy	154
4.	Continued-Fraction Representations	155
C.	Equivalent-Harmonic-Chain Representation for Response Functions	156
1.	Chain Representation of the Normalized VAF $\dot{\chi}(t)$	156
2.	Chain Representation of the Heatbath Response Functions $\dot{\theta}_p(t)$	159
D.	Molecular-Time-Scale Generalized Langevin Equations	161
E.	Equivalent-Chain Representation for the Coordinate Variables	162
1.	Chain Representation for $r_0(t)$	162
2.	Normal Modes and Eigenfunctions of the Liouville Operator	163
3.	The Clamped Equivalent Chain	164
F.	Basic Statistical Theorems	166
1.	Mode Statistics	166
2.	Atom Statistics	166
G.	Fluctuation-Dissipation and Orthogonality Theorems for the Inner Product $\langle \rangle$	167
H.	The Inner Product $\langle \rangle_{r_0, r_1, \dots, r_{p-1}}$	168
I.	Fluctuation-Dissipation and Orthogonality Theorems for the Inner Product $\langle \rangle_{r_0, r_1, \dots, r_{p-1}}$	170
J.	Formal Equipartition Theorems	171
VI.	A Theory for Liquid-State Chemical-Reaction Dynamics	172
A.	Basic Results for Interacting Reagents	173
1.	Results for the Matrix MTGLE Quantities	174
2.	Symmetry Properties of the MTGLE Matrices	175
3.	MTGLE Hierarchy for Interacting Reagents	176
4.	Equivalent-Chain Representation for Response Functions	178
5.	Equation of Motion for Interacting Reagents	179
6.	Low-Frequency Parameters	180
B.	Development of Basic Results	181
1.	Notation	181
2.	Linear-Response Calculation	184
3.	Isolated-Solute-Atom Limit	187
VII.	Calculation and Modeling of r_0 -Dependent Correlation Functions	188
A.	Test of the Clamping Approximation for Isolated Solute Atoms	189
B.	Calculation of the r_0 -Dependent Correlation Functions	191
1.	Approximation Formulae for ω_{e0}^2 , ω_{e1}^2 , and $\Omega_0^2(r_0)$	193
2.	Structure of the MTGLE Matrices for Homonuclear Diatomic Solutes	194
3.	Molecular-Dynamics and Superposition-Approximation Results for Interacting Reagents	196
C.	Matrix Gaussian Modeling of the Dynamic Solvent Response	201
1.	Short-Time Expansion of $\beta_1(t; r)$	201
2.	Matrix Gaussian Model	202

3. Numerical Test of the Matrix Gaussian Model	202
D. Heatbath Modeling for Interacting Reagents	204
VIII. Dynamics of I_2 Recombination in Simple Solvents	206
A. Equations of Motion	207
B. Simulation Results	210
Appendix A. Recursive Construction of the MTGLE Models	215
Appendix B	219
References	220

SOLITONS IN CHEMICAL PHYSICS

MICHAEL A. COLLINS

*Research School of Chemistry
Australian National University
Canberra, ACT, 2600 Australia*

CONTENTS

I.	Introduction	225
II.	Spin Systems and the Sine-Gordon Equation	229
III.	Dynamics of the Sine-Gordon System	235
IV.	Statistical Mechanics of Sine-Gordon Chains	241
V.	Observation of Solitons in Spin Systems: Correlation Functions	248
VI.	More Spin Solitons	262
VII.	Soliton Diffusion and the ϕ^4 Model	265
	A. The Conservative ϕ^4 Model	265
	B. A Langevin Approach and Applications	270
VIII.	Molecular Crystals, Resonant Energy Transfer, and the Cubic Schrödinger Equation	277
IX.	Resonance and Solitonlike Phenomena in Polyacetylene	287
X.	Lattice Vibrations	293
	A. The Toda Lattice	297
	B. Solitons in Atomic Lattices	302
	C. Periodic Vibrations	311
	D. Molecular Vibrations	317
XI.	Conclusion	320
Appendix A.	Derivation of the SG Model	322
Appendix B.	Stability of SG Solitons	325
Appendix C.	Bäcklund Transformation for SG Solitons	328
Appendix D.	Soliton Solution of the Nonlinear Schrödinger Equation	332
	References	334

A DEDUCTIVE APPROACH TO REDUCED DYNAMICS AND ENTROPY IN FINITE QUANTUM SYSTEMS

PETER PFEIFER*

*The Fritz Haber Research Center for Molecular Dynamics
The Hebrew University
Jerusalem 91904, Israel*

CONTENTS

I.	Introduction	342
A.	Irreversibility from Incomplete Resolution of States	343
B.	Master Equations Revisited	344
C.	A Caveat	347
II.	General Theory	348
A.	Master Equations	348
1.	Functionals vs. Equivalence Classes	350
2.	Continuity Properties	350
3.	Time-Translation Invariance	351
4.	How Big Can $\mathcal{Q}$ and $\mathcal{S}$ Be?	351
B.	Reduced Heisenberg Picture	352
1.	Equivalence of MEs and RHPs	352
2.	Is the RHP Unique? Continuous?	352
C.	Entropy of Effective States	353
1.	Elementary Properties of $S(\hat{\rho})$	354
2.	Interpretation of $S(\hat{\rho})$	354
3.	Another Effective-State Entropy	355
III.	Examples for Purely Kinematical Master Equations	356
A.	General Projection Scheme	356
B.	The Examples (Formal)	357
C.	The Meat of the Examples	362
1.	Example 2: Subsystem Dynamics	362
2.	Example 3: Measurement Process	362
3.	Example 4: Radiationless Transitions	362
4.	Example 5: Level Population	363
5.	Example 6: Generalized Surprisal Analysis	365
6.	Example 7: Quantum Trajectories	366

*Present address: Fakultät für Chemie, Universität Bielefeld, D-4800 Bielefeld, F.R.G.

D. Variants	366
1. Ad Example 4	366
2. Ad Example 6	367
IV. Examples for Purely Dynamical Master Equations	368
A. Nonexpansion of Relevant Observables	368
1. Example 8: Observables Closed under Commutation with the Hamiltonian	369
2. Example 9: Simplest Continuous Version of Example 8	369
B. Weak Asymptotic Constants	370
1. Example 10: Maximum-Entropy Asymptotics	370
2. Example 11: Spin Measurement	371
V. Summary	373
References	374
