# MULTIPHOTON IONIZATION OF GASEOUS MOLECULES\*

HANNA REISLER and CURT WITTIG

*Chemistry Department,  
University of Southern California,  
Los Angeles, CA 90089-0484, USA*

## CONTENTS

I. Introduction . . . . .	1
II. Recent Results and Observations . . . . .	2
A. Photoelectron Spectra Following MPI . . . . .	10
B. MPI/IRMPE . . . . .	18
C. Taking the Non-linearities out of the Experiment: Coherent, Tunable VUV Radiation . . . . .	21
III. Discussion and Conclusions . . . . .	23
Acknowledgements . . . . .	26
References . . . . .	26

# LASER ISOTOPE SEPARATION BY THE SELECTIVE MULTIPHOTON DECOMPOSITION PROCESS\*

ROBERT D. McALPINE and D. K. EVANS

*Physical Chemistry Branch, Atomic Energy of Canada Limited Research Company, Chalk River Nuclear Laboratories, Chalk River, Ontario, K0J 1J0, Canada*

## CONTENTS

List of Symbols	32
I. Introduction . . . . .	33
II. The Principles of Isotopic Enrichment . . . . .	34
A. The Theory of an Ideal Cascade . . . . .	34
B. The Fundamentals of Laser Isotope Separation (LIS) . . . . .	39
1. The Selective Multiphoton Absorption (MPA) and Decomposition (MPD) Process . . . . .	39
2. General Morphology of LIS Processes . . . . .	45
3. Assessment of LIS Experiments as a Basis for a Process . . . . .	49
III. Laser Sources for LIS . . . . .	49
A. The CO <sub>2</sub> Laser . . . . .	50
B. Hydrogen Halide Chemical Lasers . . . . .	51
C. Optically Pumped Lasers . . . . .	51
D. Raman Shifted Lasers . . . . .	52
E. Conclusions . . . . .	52
IV. Selective MPD of Hydrogen Isotopes . . . . .	52
A. Market for Hydrogen Isotope Enrichment . . . . .	52
B. Conventional Isotope Enrichment . . . . .	55
1. Chemical Exchange Processes . . . . .	55
2. Other Conventional Processes . . . . .	57
C. Demonstration of Selective MPD . . . . .	57
1. Methane and the Haloforms . . . . .	58
2. The Difluorohalomethanes . . . . .	67
3. Other Halocarbons . . . . .	68
4. Hydroxyl-Containing Molecules . . . . .	70
D. Conclusions . . . . .	70
V. Selective MPD of Carbon Isotopes . . . . .	71
A. Market . . . . .	71
B. Demonstration of Selective MPD . . . . .	71

\*Issued as AECL Number 8233.

I.	The Trifluoromethylhalides . . . . .	71
2.	Dichlorodifluoromethane . . . . .	74
3.	Chlorodifluoromethane . . . . .	74
4.	Hexafluoroacetone . . . . .	75
C.	Conclusions . . . . .	75
VI.	Selective MPD of Boron Isotopes . . . . .	75
A.	MPD of $\text{BCl}_3$ . . . . .	75
B.	Selective MPD of Other Boron-Containing Molecules . . . . .	77
C.	Conclusions . . . . .	78
VII.	Selective MPD of Sulphur Isotopes . . . . .	78
A.	MPD of $\text{SF}_6$ . . . . .	78
B.	MPD of Other Sulphur-Containing Molecules . . . . .	83
C.	Conclusions . . . . .	83
VIII.	Selective MPD of Osmium Tetroxide . . . . .	84
IX.	Selective MPD of Uranium Isotopes . . . . .	85
A.	Introduction . . . . .	85
B.	MPD of $\text{UF}_6$ . . . . .	85
C.	MPD of Other Uranium-Containing Molecules . . . . .	87
D.	Conclusions . . . . .	88
X.	Selective MPD of Isotopes of Other Elements . . . . .	88
A.	Chlorine . . . . .	88
B.	Molybdenum . . . . .	88
C.	Selenium . . . . .	88
XI.	Concluding Remarks . . . . .	89
	References . . . . .	90

# PHOTOIONIZATION IN NON-POLAR LIQUIDS

B. S. YAKOVLEV and L. V. LUKIN

*Institute of Chemical Physics of USSR Academy  
of Sciences, Chernogolovka, Moscow Region, 142432, USSR*

## CONTENTS

I. Introduction . . . . .	99
II. Free Ion Generation . . . . .	101
A. The Onsager Model . . . . .	101
B. Low-Field Photoconductivity . . . . .	103
C. The Temperature Effect . . . . .	104
D. The Wavelength Dependence in the Threshold Region . . . . .	106
E. The Electric Field Effect . . . . .	110
1. High-Field Photoconductivity . . . . .	111
2. Electric Field Fluorescence Quenching . . . . .	114
III. The Nature of Thermalized Ion Pairs . . . . .	116
A. Quasi-Free and Localized Electrons . . . . .	116
B. Electron Localization Study . . . . .	119
C. Whether the Separation Distance Distribution is Isotropic . . . . .	123
IV. The Dynamics of Geminate Recombination . . . . .	126
A. The Time-Dependent Onsager Problem . . . . .	127
B. Electron Scavenging Effect . . . . .	130
1. Electron Scavenger Fluorescence Quenching . . . . .	132
C. Photoassisted Dissociation of Geminate Ion Pairs . . . . .	136
D. Transient D.C. Photoconductivity Caused by Geminate Ion Pairs . . . . .	141
1. The Diffusion Model Predictions . . . . .	142
2. Transient D.C. Conductivity Measurements . . . . .	146
E. Sensitivity of Various Methods to the Initial Ion Pair Separation Distribution . . . . .	148
V. Stages Preceding the Thermalized Ion Pair Formation . . . . .	150
A. The Initial Quantum Yield of Geminate Ion Pairs . . . . .	151
B. The Nature of Ion Pair Precursors . . . . .	153
VI. Summary . . . . .	155
References . . . . .	156

# PHOTOELECTRON SPECTROSCOPY OF EXCITED STATES

KATSUMI KIMURA

*Institute for Molecular Science, Okazaki 444, Japan*

## CONTENTS

I. Introduction	162
II. Characteristics of Excited State Photoelectron Spectroscopy	165
III. Experimental Techniques	168
A. Lasers for Excitation and Ionization	169
B. Electron Energy Analyser	169
C. Nozzle Beam Source	171
D. Calibration for the Photoelectron Energy	172
E. Example of Apparatus	172
IV. Basic Information Obtained from Excited State Photoelectron Spectroscopy	175
A. Photoelectron Energy	175
B. Ionization Selectivity	176
C. Spin-Orbit Splitting	177
D. Vibrational Structure	178
V. Excited State Photoelectron Spectra	181
A. Atoms	181
1. Xenon	181
2. Krypton	183
3. Iron	183
B. Small Molecules	185
1. H <sub>2</sub>	185
2. NO	185
3. CO	187
4. H <sub>2</sub> S	188
5. NH <sub>3</sub>	189
C. Large Molecules	190
1. Benzene	190
2. Toluene	192
3. Chlorobenzene	192
4. Benzaldehyde	193
5. Naphthalene	193
D. Van der Waals Complex	193
1. Ar—NO	193
2. H <sub>2</sub> O-Phenol	194
VI. Photoelectron Angular Distribution	194
VII. Conclusions	195
Acknowledgements	197
References	197

# PREDISSOCIATION OF POLYATOMIC VAN DER WAALS MOLECULES\*

KENNETH C. JANDA

*Division of Chemistry and Chemical Engineering,  
California Institute of Technology,  
Pasadena, California 91125, USA*

## CONTENTS

I. Introduction	201
II. Triatomic Molecules	204
A. ArH <sub>2</sub>	204
B. ArHCl	211
C. HeI <sub>2</sub>	212
D. NeCl <sub>2</sub> and NeBr <sub>2</sub>	214
III. Simple Dimers	216
A. HF Dimer	217
B. N <sub>2</sub> O Dimer and CO <sub>2</sub> Dimer	219
IV. Polyatomic Molecules: Ground Electronic Surface	219
A. Ethylene Clusters	220
B. SF <sub>6</sub> Clusters	228
C. OCS Clusters	231
D. Hydrocarbon and Halocarbon Clusters	232
E. Large Clusters	234
V. Polyatomic Molecules: Excited Electronic Surfaces	237
A. Glyoxal Complexes	237
B. S-Tetrazene–Ar	239
C. Other Examples	240
VI. Epilogue	240
Acknowledgements	241
References	242

# ION PHOTOFRAGMENT SPECTROSCOPY

JOHN T. MOSELEY

*Department of Physics  
and  
Chemical Physics Institute,  
University of Oregon,  
Eugene, Oregon 97403, USA*

## CONTENTS

I. Introduction . . . . .	246
II. Experimental Techniques. . . . .	247
A. Gas-Phase Techniques . . . . .	247
B. Trapped Ion Techniques . . . . .	248
C. Fast Ion Beams . . . . .	249
D. Photon Sources . . . . .	250
III. Hydrogen Diatomic Ions. . . . .	251
IV. Quartet States of O <sub>2</sub> <sup>+</sup> . . . . .	256
A. Determination of Dissociative Potential Curves. . . . .	257
B. Predissociation Spectroscopy . . . . .	259
C. Predissociation Lifetimes and Mechanisms . . . . .	262
D. Branching Ratios and 'Half-Collisions' . . . . .	265
E. Angular Distributions . . . . .	267
V. Photodissociation of CH <sup>+</sup> and its Formation by Radiative Association . . . . .	270
VI. Other Diatomic Ions . . . . .	275
A. Rare Gas Dimer Ions. . . . .	275
B. Alkali Dimer Ions . . . . .	276
C. Hydride Ions . . . . .	277
D. Highly Excited NO <sup>+</sup> . . . . .	277
E. Doubly Ionized Nitrogen . . . . .	278
VII. Triatomic Ions. . . . .	278
A. Theory of Triatomic Photodissociation . . . . .	278
B. N <sub>2</sub> O <sup>+</sup> . . . . .	279
C. Hydrogen Triatomic Ions . . . . .	283
D. The Ozone Positive Ion . . . . .	284
E. Other Studies of Triatomic Ions . . . . .	286
VIII. Larger Polyatomic Ions . . . . .	287
A. Cluster Ions . . . . .	287
B. Methyl Iodide Ions . . . . .	288
C. Large Molecular Ions. . . . .	289

IX. Negative Ions . . . . .	289
A. The $\text{CO}_3^-$ Ion . . . . .	290
B. The $\text{O}_3^-$ Ion . . . . .	292
X. Conclusions and Future Directions . . . . .	293
Acknowledgements . . . . .	294
