PRINCIPLES AND APPLICATIONS OF MULTIPLE-QUANTUM NMR

M. MUNOWITZ* and A. PINES

*Department of Chemistry
University of California, Berkeley, and
Materials and Molecular Research Division
Lawrence Berkeley Laboratory, Berkeley, California.*

CONTENTS

I.	Introduction	2
II.	NMR Fundamentals	7
	A. Energy Levels	7
	B. Spin- $\frac{1}{2}$ in an External Magnetic Field	9
	1. State Vector Description—Precession	9
	2. Density Operator Description—Coherence	12
	3. Time Development of the Density Operator in the Rotating Frame	13
	C. Creation of Coherence by Radiofrequency Pulses	14
	D. Local Interactions	17
	1. Chemical Shift	17
	2. Dipole–Dipole Interaction	19
	3. Scalar Coupling	21
	4. Quadrupole Coupling	21
	E. Averaging of Internal Interactions	22
	F. Expansion of the Density Operator in an Orthogonal Basis	27
	1. Outer Product Eigenbasis	28
	2. Fictitious Spin- $\frac{1}{2}$ Operators	28
	3. Single-Spin Product Operators	30
III.	Properties of Spin Coherence	32
	A. Multiple-Quantum Coherence—Physical Picture	32
	B. Enumeration of Multiple-Quantum Coherences	33
	C. Response to Resonance Offsets and Chemical Shifts	34
	D. Response to Weak Couplings	36
	E. Effects of Radiofrequency Pulses and Phase Shifts	38
	F. Total Spin Coherence	39
IV.	Excitation and Detection of Multiple-Quantum Coherence	40
	A. General Form of the Multiple-Quantum Experiment	40
	1. Excitation and Response	41
	2. Time Reversal and Conjugate Mixing	42
	3. Two-Dimensional Fourier Transformation	43

*Present address: *Amoco Research Center, Naperville, Illinois*

2 PRINCIPLES AND APPLICATIONS OF MULTIPLE-QUANTUM NMR

B.	Narrowband Excitation	45
1.	Selective Double-Quantum Pulse	45
2.	Coherence Transfer by Multistep Processes	50
3.	Multistep Coherence Transfer with Amplitude-Modulated Pulses	53
C.	Broadband Excitation	54
1.	Nonselective Pulse Methods	54
2.	Offset-Independent Excitation	56
3.	Radiofrequency Pulses and Coherence Transfer Selection Rules	58
4.	Uniform Excitation over a Range of Coupling Constants	63
D.	Separation of Zeeman Orders in Multiple-Quantum Spectroscopy	68
1.	Time-Proportional Phase Incrementation	69
2.	Phase Cycling Techniques	70
3.	Coherence Transfer Echo Filtering	71
E.	Excitation Dynamics in Strongly Coupled Systems	72
1.	Early Time Development	73
2.	Multiple-Quantum Intensities after Long Excitation Periods—Statistical Model	78
3.	Multiple-Quantum Dynamics in Strongly Coupled Solids	81
F.	n -Quantum Selective Excitation	90
V.	Examples and Applications	96
A.	Multiple-Quantum Filtering in High-Resolution NMR	96
1.	Double-Quantum Filtering in ^{13}C NMR	97
2.	n -Quantum and n -Spin Filtering	100
3.	Spin Topology Filtration	100
B.	Characterization of Spin Clusters in Solids	108
C.	Heteronuclear Coherence Transfer	113
1.	Polarization Transfer and Spectral Editing	116
2.	Chemical Shift Correlation and Indirect Detection	118
3.	Removal of Magnetic Field Inhomogeneity	121
4.	Alternative Excitation Schemes	123
D.	Simplification of Spectra	125
1.	Homonuclear Multiple-Quantum Spectroscopy	125
2.	Heteronuclear Multiple-Quantum Spectroscopy	128
E.	Resonance Offset Effects: Applications of Multiple-Quantum NMR to Imaging and the Measurement of Diffusion Constants	131
1.	NMR Imaging of Solids by Multiple-Quantum Resonance	132
2.	Measurement of Diffusion Constants by Multiple-Quantum Spin Echo Decays	134
