# LIGAND-STABILIZED METAL CLUSTERS: STRUCTURE, BONDING, FLUXIONALITY, AND THE METALLIC STATE

KARL C. C. KHARAS AND LAWRENCE F. DAHL

*Department of Chemistry,  
University of Wisconsin-Madison,  
Madison, Wisconsin 53706*

## CONTENTS

- I. Brief Survey of Metal Cluster Compounds
- II. Structure and Bonding in Metal Clusters
  - A. The Isolobal Analogy
  - B. Lauher's Rule
  - C. Edge-Localized Versus Delocalized Bonding
  - D. The Polyhedral Skeletal Electron-Pair Model
  - E. Tensor Surface Harmonic Theory
  - F. The Topological Electron-Counting Model
  - G. The Graph-Theory-Derived Model
  - H. Electron-Counting Procedures for Large Clusters
    - I. Applications of Electron-Counting Methods
    - J. Importance of  $d$ - $d$  Metal Interactions
- III. Stereochemical Nonrigidity of Metal Atoms in Clusters
  - A. Metal Cluster Motion in a Fixed Ligand Cage
  - B. Metal-Core Rearrangements in Several Tetrametal Clusters
  - C. Intertriangular Metal Rotations About Pseudo Threefold Axes
  - D. Metal Fragment Migration Over Cluster Surfaces
  - E. Metal Cluster "Breathing" Fluxionality
  - F. Fluxionality in Gold Clusters
  - G. Icosahedral Interconversions
  - H. Octahedral Interconversions
    - I. Importance of Connectivity and Electron-Counting Rules
- IV. Clusters, Surfaces, and the Metallic State
  - A. Structural Chemistry of Large Metal Carbonyl Clusters
  - B. Large Metal Phosphine Clusters
  - C. Transition of Metal Clusters Toward the Metallic State
    - 1. Unusual Magnetic Behavior
    - 2. A New, Cluster-Based Electronic Conductor
  - D. Nonexistence of Binary Palladium Carbonyl Clusters
- V. Concluding Remarks
- References

# STRUCTURAL MODELS FOR CLUSTERS PRODUCED IN A FREE JET EXPANSION

J. FARGES, M. F. DE FERAUDY, B. RAOULT, and G. TORCHET

*Laboratoire de Physique des Solides, Université de Paris Sud,  
F-91405 Orsay, France*

## CONTENTS

- I. Introduction
- II. Experiment
  - A. Electron Diffraction Apparatus
  - B. Diffraction Patterns
- III. Geometrical Models with Fivefold Symmetry
  - A. Models with  $N \leq 13$
  - B. Models Made of Double Icosahedron Units
  - C. Multilayer Icosahedra
- IV. Relaxation of Geometrical Models
  - A. DIC Models
  - B. MIC Models
    - 1. Face Convexity
    - 2. Radial Relaxation
    - 3. Tangential Relaxation
  - C. Structural Transitions
- V. Intermediate Models
  - A. Polyicosahedral Models
  - B. Construction of an MIC Layer
  - C. Comment on Metallic Clusters
    - 1. Stability
    - 2. Structure
- VI. Molecular Clusters
  - A.  $\text{CO}_2$  and  $\text{SF}_6$
  - B.  $\text{N}_2$  and  $\text{CH}_4$
  - C.  $\text{H}_2\text{O}$
- References

# **SOLID-LIQUID PHASE BEHAVIOR IN MICROCLUSTERS**

**R. STEPHEN BERRY, THOMAS L. BECK, AND HEIDI L. DAVIS**

*Department of Chemistry and James Franck Institute, University of Chicago,  
Chicago, Illinois 60637*

**JULIUS JELLINEK**

*Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439*

## **CONTENTS**

- I. Introduction**
  - A. The Evidence Concerning "Phases" for Clusters**
  - B. Consequences of the Finite Size**
- II. A Quantum Statistical Theory**
  - A. Stage 1: Properties, if Two "Phases" Exist; the Theory of Melting and Freezing of Microclusters**
  - B. Stage 2: Requirements for Coexistence and Their Implications**
- III. Computer Simulation Studies of the Phase Change**
  - A. Background**
  - B. Isoergic Simulations**
    - 1. Methodology**
    - 2. Physical Properties**
    - 3. Ar<sub>13</sub> and Ar<sub>N</sub>**
    - 4. Mechanistic Studies**
  - C. Isothermal Simulations**
    - 1. Methods**
    - 2. Monte Carlo Results**
    - 3. Constant-Temperature MD Simulations**
- IV. Summary**
- References**

# THE QUANTUM MECHANICS OF CLUSTERS

DAVID L. FREEMAN

*Department of Chemistry, University of Rhode Island, Kingston, Rhode  
Island 02881*

J. D. DOLL

*Chemistry Division, Los Alamos National Laboratory, Los Alamos, New  
Mexico 87545*

## CONTENTS

- I. Introduction
- II. Homogeneous Steady-State Nucleation Rates
- III. Physical Clusters in a Vapor and the Evaluation of Their Properties
- IV. Fourier Path Integral Monte Carlo Methods
- V. Argon Cluster Results
- VI. Magic Numbers
- VII. Conclusions
- References

# SMALL CLUSTERS—REACTIONS OF VAN DER WAALS MOLECULES

R. NAAMAN

*Department of Isotope Research, Weizmann Institute of Science,  
Rehovot, Israel*

## CONTENTS

- I. Introduction
  - A. Kinematic Effects
  - B. Dynamic Effects
  - C. Steric Effects
  - D. Electronic Effects
  - E. Energetics
- II. Experimental Concepts
  - A. Physical Separation
  - B. Condensation Modeling
- III. Intracuster Reactions
- IV. Intercluster Reactions
  - A. Recombination Reactions
  - B. Exchange of van der Waals Bonds
  - C. Exchange Reactions with Metal Atoms
  - D. Conclusions and Generalizations
- V. Future Prospects
- References

# **MOLECULAR SURFACE CHEMISTRY: REACTIONS OF GAS-PHASE METAL CLUSTERS**

**ANDREW KALDOR, DONALD M. COX, AND MITCHELL  
R. ZAKIN**

*Corporate Research Laboratory, Exxon Research and Engineering  
Company, Annandale, New Jersey 08801*

## **CONTENTS**

- I. Introduction
- II. Experimental Approach
  - A. Source
  - B. Sample
  - C. Cluster Growth
  - D. Reactor Considerations
  - E. Detection
  - F. Mass Spectrometry
- III. Ion Chemistry Studies
- IV. Physical Characterization of Gas-Phase Clusters
- V. Chemical Reactivity
- VI. Molecular Addition Reactions
  - A. Hydrogen
  - B. Nitrogen
  - C. Methane
  - D. Carbon Monoxide
  - E. Oxygen
  - F. Ammonia
  - G. Methanol
  - H. Water
- VII. Addition Reactions with Gas-Phase Products
  - A. "Dehydrogenation" Reactions
  - B. Benzene
  - C. Other C<sub>6</sub> Hydrocarbons
  - D. Carbon Dioxide
  - E. Hydrogen Sulfide
- VIII. Vibrational Spectroscopy of Metal Cluster Adducts
- IX. Model of Cluster Reactivity
  - A. Empirical Fit
  - B. Electronic Model
- X. Summary
- References

# NUCLEATION OF CRYSTALS FROM THE MELT

DAVID W. OXTOBY

*James Franck Institute and Department of Chemistry, University of Chicago,  
Chicago, Illinois 60637*

## CONTENTS

- I. Introduction
- II. Classical Nucleation Theory
  - A. Homogeneous Nucleation
  - B. Heterogeneous Nucleation
- III. The Liquid-Solid Interface
  - A. Experimental Measurements
  - B. Computer Simulation Results
  - C. Theoretical Models
  - D. Density Functional Theories of the Interface
  - E. Binary Mixtures
- IV. Experimental Results
  - A. Single-Component Systems
  - B. Pressure-Dependent Nucleation
  - C. Metal Alloys
  - D. Water and Aqueous Solutions
- V. Beyond Classical Nucleation Theory
  - A. The Density Functional Approach
  - B. Computer Simulations of Nucleation
  - C. Heterogeneous Nucleation
- References

# **VIBRATIONAL RELAXATION IN CONDENSED PHASES**

**J. CHESNOY AND G. M. GALE**

*Laboratoire d'Optique Quantique du C.N.R.S., Ecole Polytechnique,  
Palaiseau, France*

## **CONTENTS**

- I. Introduction**
  - A. Preamble**
  - B. Presentation of Dephasing and Energy Relaxation**
  - C. Comparison of Experimental Techniques**
- II. Energy Relaxation in Liquids**
  - A. Distribution Function Methods**
  - B. Pure Simple Fluids**
  - C. Fluid Mixtures**
  - D. Vibration-Vibration Transfer in Liquids**
  - E. Anisotropic Molecules**
  - F. Large Molecules and Higher Vibrational Levels**
  - G. Dense Phase Modification of the Potential**
- III. Vibrational Dephasing in Liquids**
  - A. Calculation of Dephasing Rates**
  - B. Modulation Speed and Inhomogeneous Broadening**
  - C. The Role of Long-Range Forces**
- IV. Relaxation in Solids and Across Phase Transitions**
  - A. Vibrational Relaxation in Pure Solids**
  - B. Hybrid Levels and Two-Vibron States**
  - C. Propagation of Vibrational Energy in Solids**
  - D. The Liquid-Solid Phase Transition**
  - E. The Approach to Critical Points**
- References**

# ENERGY PROFILES FOR ORGANIC REACTIONS IN SOLUTION

WILLIAM L. JORGENSEN

*Department of Chemistry, Purdue University, West Lafayette, Indiana 47907*

## CONTENTS

- I. Introduction
- II. Methodology
- III. Computed Potentials of Mean Force
  - A.  $S_N2$  Reaction of  $Cl^- + CH_3Cl$
  - B. Addition Reaction of  $OH^- + H_2C = O$
  - C.  $(CH_3)_3C^+Cl^-$  Ion Pairs in Water
- IV. Concluding Remarks
- References

# **ACTIVATED RATE PROCESSES IN CONDENSED PHASES: THE KRAMERS THEORY REVISITED**

**ABRAHAM NITZAN**

*School of Chemistry, Sackler Faculty of Sciences Tel Aviv University, Tel  
Aviv 69978, Israel*

## **CONTENTS**

- I. Introduction**
- II. The Kramers Treatment**
  - A. Moderate to Large Damping**
  - B. Low Damping**
- III. The Need for Generalization of the Kramers Theory**
- IV. The Generalized Kramers Model**
- V. Non-Markovian Effects in the One-Dimensional Case**
- VI. The Escape Rate of a Non-Markov Multidimensional Process**
  - A. Barrier Dynamics**
  - B. Well Dynamics**
  - C. The Combined Solution**
- VII. Escape in the Presence of External Periodic Force: The Low-Friction Limit**
  - A. Phase-Diffusing Driving Field**
  - B. External Oscillating Force in the Fast Thermal Dephasing Limit**
- VIII. Numerical Results and Applications**
- Appendix A. Evaluation of the Reactive Mode Well Distribution**
- Appendix B. Evaluation of  $\tau$  [Eqs. (6.51)]**
- References**
