THEORY OF THE DYNAMIC SUSCEPTIBILITY OF MAGNETIC FLUIDS 1

By M. I. Shliomis and V. I. Stepanov

A SEMICLASSICAL THEORY OF DIELECTRIC RELAXATION AND ABSORPTION: MEMORY FUNCTION APPROACH TO EXTENDED ROTATIONAL DIFFUSION MODELS OF MOLECULAR REORIENTATIONS IN FLUIDS 31

By Yuri P. Kalmykov and Sergei V. Titov

THE COMPLEX SUSCEPTIBILITY OF A LIBRATING DIPOLE AN AXIALLY SYMMETRIC POTENTIAL WELL 125

By Vladimir I. Gaiduk and Boris M. Tseitlin

STRUCTURE AND STRUCTURE-SENSITIVE PROPERTIES OF AQUEOUS SOLUTIONS OF ELECTROLYTES AND NONELECTROLYTES 379

By A. K. Lyashchenko

FAR-INFRARED AND LOW-FREQUENCY RAMAN SPECTRA OF CONDENSED MEDIA 427

By Tatiana S. Perova

MILLIMETER ABSORPTION SPECTROSCOPY OF AQUEOUS SYSTEMS 483

By Yuri I. Khurgin, Valentina A. Kudryashova, Vladimir A. Zavizion, and Oleg V. Betskii

RELAXATION PHENOMENA OF MAGNETIC EXCITATIONS IN FERROMAGNETIC MEDIA 545

By S. A. Nikitov

THE EFFECTIVE FIELD METHOD IN THE ORIENTATIONAL KINETICS OF MAGNETIC FLUIDS AND LIQUID CRYSTALS 595

By Yuri L. Raĭkher and Mark I. Shliomis

AUTHOR INDEX 753

SUBJECT INDEX 763

THEORY OF THE DYNAMIC SUSCEPTIBILITY OF MAGNETIC FLUIDS

M.I. SHLIOMIS and V.I. STEPANOV

Institute of Continuous Media Mechanics,
Urals Branch of the Russian Academy of Sciences,
Perm, Russia

CONTENTS

List of Major Symbols for Physical Quantities
I. Introduction
II. General Fokker–Planck Equation
III. Susceptibility of Monodisperse Ferrocolloids
IV. Susceptibility of Polydisperse Colloids
V. Conclusion
References

Relaxation Phenomena in Condensed Matter, Edited by William Coffey. Advances in Chemical Physics Series, Vol. LXXXVII.
ISBN 0-471-30312-7 © 1994 John Wiley & Sons, Inc.

A SEMICLASSICAL THEORY O
DIELECTRIC RELAXATION AN
ABSORPTION: MEMORY FUNCTI
APPROACH TO EXTENDED ROTATI L
DIFFUSION MODELS OF MOLECI
REORIENTATIONS IN FLUIDS

YURI P. KALMYKOV and SERGEI V. TITOV

Institute of Radio Engineering and Electronics,
Russian Academy of Sciences,
Fryazino, Moscow Region, Russia

CONTENTS

List of Major Symbols
I. Introduction
II. Memory Function Approach: Fundamental Relations
III. Extended Rotational Diffusion Models
  A. Collision Mechanisms
  B. General Equations
    1. Semiclassical Extended Rotational Diffusion Models
    2. Quantum Dipole Autocorrelation Functions of a Molecule: The Free Rotational Model
    3. Quantum Magnetic Dipole Moment Autocorrelation Function of Molecular Oxygen for the Free Rotational Model
IV. Spectral Line Shapes for Extended Rotational Diffusion Models
V. Finite Time of Molecular Collisions
VI. Application of the Theory to the Calculation of Spectra
  A. Molecular Oxygen
  B. The Solutions HCl–SF_6 and DCl–SF_6
  C. Water Vapor

Relaxation Phenomena in Condensed Matter, Edited by William Coffey. Advances in Chemical Physics Series, Vol. LXXXVII.
ISBN 0-471-30312-7 © 1994 John Wiley & Sons, Inc.

VII. Conclusions
Appendixes
A. The Autocorrelation Function Method
B. Sum Rules and Spectral Moments
C. The Kinetic Equation Method
D. Solution of the Kinetic Equation for a Semiclassical Analog of the *J*-Diffusion Model
E. Proof of Gordon's Sum Rule for the *J*-Diffusion Model
F. Correspondence Between the Classical and Semiclassical Results
G. Comparison of the Semiclassical *J*-Diffusion Model and Gordon's Theory
H. Method of Calculation of the Energy Levels and Line Intensities of a Semirigid Asymmetric Rotor
Acknowledgments

THE COMPLEX SUSCEPTIBILITY OF A LIBRATING DIPOLE IN AN AXIALLY SYMMETRIC POTENTIAL WELL

VLADIMIR I. GAIDUK and BORIS M. TSEITLIN

Institute of Radio Engineering and Electronics,
Russian Academy of Sciences,
Fryazino, Moscow Region, Russia

CONTENTS

List of Conventional Symbols

I. Problem: Analytical Models of Orientational Relaxation in the Strong Collision Approximation

Part 1. Dynamic Method

II. Propagation Constant and Effective Dielectric Susceptibility as an Average of the Complex Power Integral $\int Q\,dt$
  A. Maxwell's Equations for a Medium with Molecular Currents: The Dispersion Equation
  B. Averaging of a Complex Power over an Ensemble Using the t_0 Theorem
  C. Steady State and Induced Distributions in Phase Space
  D. Effective Susceptibility χ^* of a Polar Medium in Terms of the Propagation Constant

III. Spectrum of the Undamped Rotational Motion
  A. The Susceptibility χ_B^* and Spectral Function $L(z)$
  B. Representation of the Spectral Function $L(z)$ in Terms of the Undamped Motion
  C. Relation Between the Spectral Function and the Undamped Autocorrelation Function
  D. Dependence of $L(z)$ and χ_B^* on the Direction of the Applied External Field: Transverse and Longitudinal Susceptibilities
  E. $L(z)$ Representation Using the Fourier Amplitudes of the Undamped Periodic Motion

---

Relaxation Phenomena in Condensed Matter, Edited by William Coffey. Advances in Chemical Physics Series, Vol. LXXXVII.
ISBN 0-471-30312-7 © 1994 John Wiley & Sons, Inc.

F. A Macroscopic Isotropic Medium Considered as a Set of Locally Anisotropic Ensembles
G. Integrated Absorption (Gordon's Sum Rule)
H. Transition to the Limit $\tau \to \infty$ (Landau Damping)
IV. Models of Collisions and Effect of the Brownian Rotation on Dielectric Relaxation
A. Effective Susceptibility χ^* for Non-Equilibrium-Induced Distributions
B. Collision Models
C. The Debye Relaxation Mechanism as a Low-Frequency Approximation of the Effective Susceptibility $\chi(\omega)$
D. The Relaxation Time τ_D and the Maximum Debye Loss χ''_D as Functions of Statistical Averages
E. A Discussion of Collision Models
F. The Relation Between Complex Permittivity and Effective Susceptibility (Internal Field Correction)
V. Generalizations of the Theory
A. Generalized Spectral Function $K(z)$
B. Dielectric Response to an Elliptically Polarized Planar Electromagnetic Wave
C. The Dielectric Susceptibility Tensor as the Response of a Polar Medium to a Transverse Electromagnetic Wave

Part 2. Molecular Models

VI. Uniform and Lumped Uniform Potentials of Interparticle Interaction
A. Free Rotation Between Strong Collisions: the Extended Rotational Diffusion (ED) Model of Symmetric Top Molecules
B. The Cone-Confined Rotator (CCR) Model
C. The Confined Rotator (CR) Model
VII. Behavior of the Librating Dipole in Single- and Double-Potential Wells ($\cos \vartheta$ and $\cos^2 \vartheta$ Profiles)
A. The Elastic Bond Model: Single-Well Potential
B. The Elastic Bond Model: Double-Well Potential
C. $\cos^2 \vartheta$ and $\cos \vartheta$ Potential Wells: Rigorous Theory
D. Mean Values of Molecular Dynamics Parameters
E. Spectral Functions of the *L*- and *R*-Subensembles
F. Field Models in the Long-Lifetime Limit
G. The Quasi-Elastic Bond Model
H. Stratified Potential Well Approach to the Field Models with Cosine and Cosine Squared Potentials
VIII. The Ion–Dipole System
IX. Extension of the Theory to Multicomponent Systems
A. Systems Possessing a Discrete Set of Relaxation Times
B. A System with a Single Relaxation Time (a Microscopic Homogeneous System)

Part 3. Applications of the Theory

X. Dielectric Relaxation and Molecular Dynamics in Nonassociated Liquids
A. Summary of the Theoretical Descriptions of Self-Consistent Collision Models

B. Dielectric Spectra of Strongly Absorbing Liquids
C. Libration Amplitude β and Frequency ν_L of the Maximum Absorption
D. Angular Paths ϑ_L, ϑ_R, Lifetime τ, and Barrier Height U_0
E. Self-Diffusion Coefficient D, Barrier U_0, and Path Lengths l: Correlation Between Rotational and Translational Motion
F. Libration Amplitude and Lifetime τ in Light of the Debye Theory of Rotational Diffusion
G. The Dipole ACFs $\Phi(t)$ and $\Phi(t)$

XI. Conclusion
A. Theoretical Foundations and Calculation Procedure
B. Comparison of Molecular Models
C. Applicability of the Theory to Individual Liquids
D. Physical Picture of Orientational Relaxation
E. Problems to Be Solved

Appendixes
A. The t_0 Theorem
B. The Average Perturbation (AP) Theorem
C. Physical Significance of the Variables l and m

STRUCTURE AND STRUCTURE-SENSITIVE PROPERTIES OF AQUEOUS SOLUTIONS OF ELECTROLYTES AND NONELECTROLYTES

A. K. LYASHCHENKO

N. S. Kurnakov Institute of General and Inorganic Chemistry, Russian Academy of Sciences, Russia

CONTENTS

I. I, V, D, Structures of Water and Solutions
II. Structure-Geometric Method for Analysis of Solution Structure
III. Aqueous Solutions of Nonelectrolytes and Weak Electrolytes
  A. Geometric Model of Solution Structure
  B. Volumetric Properties of Solutions with Hydrophilic Hydration of Molecules on the Basis of the Structural Model
  C. Structure-Making and Structure-Breaking Effects of Hydrophilic and Hydrophobic Hydrations
  D. Dielectric Relaxation of Aqueous Solutions of Polar Molecules
IV. Structure of Electrolyte Aqueous Solutions
  A. Geometric Model of Solution Structure
  B. Transformation from Water–Electrolyte to Electrolyte–Water Solvent

FAR-INFRARED AND LOW-FREQUENCY RAMAN SPECTRA OF CONDENSED MEDIA

TATIANA S. PEROVA

Department of Photophysics,
Vavilov State Optical Institute,
St.-Petersburg, Russia

CONTENTS

I. Rotational and Translational Molecular Motions in the Low-Frequency Vibrational Spectra of Liquids
- A. Introduction
- B. A Lattice-like Model for Calculation of Frequency of Maximum Absorption
- C. Far-Infrared Spectra of Some Nitro Compounds
- D. Temperature and Isotopic Substitution Behavior of Spectra
- E. Comparison of Far-Infrared and Low-Frequency Raman Spectra
- F. Solution Behavior of Spectra
- G. Distinctive Features of the Spectrum of Superviscous Liquids

II. Low-Frequency Vibrational Spectra of Liquid Crystals
- A. Introduction
- B. Far-Infrared Spectra of Liquid Crystal Compounds
- C. Polarized Far-Infrared Spectra of Nematic Liquid Crystals
- D. The Dichroic Ratio
- E. Depolarized Rayleigh Wing Scattering in Some Nematic and Lyotropic Liquid Crystals

MILLIMETER ABSORPTION SPECTROSCOPY OF AQUEOUS SYSTEMS

YURI I. KHURGIN

Institute of Organic Chemistry,
Russian Academy of Sciences,
Moscow, Russia

and

VALENTINA A. KUDRYASHOVA, VLADIMIR A. ZAVIZION,
and OLEG V. BETSKII

Institute of Radio Engineering and Electronics,
Russian Academy of Sciences,
Fryazino, Moscow Region, Russia

CONTENTS

I. Introduction
II. Experimental Techniques
III. Water and Its Interaction with Millimeter Radiation
IV. Aqueous Solutions of Strong Electrolytes
  A. General Aspects of Ion Hydration
  B. Rotational Mobility of Water Molecules and Hydration of Ions
  C. Absorption Nonadditivity for Aqueous Salt Solutions and Ion Hydration
  D. Absorption Deficiency as an Indicator of Hydration
  E. The Influence of Ion–Ion Interaction on Millimeter Radiation Absorption
  F. Frequency Dependence of Absorption
V. Dipolar Ions: Amino Acids
  A. General Aspects of Amino Acid Hydration

Relaxation Phenomena in Condensed Matter, Edited by William Coffey. Advances in Chemical Physics Series, Vol. LXXXVII.
ISBN 0-471-30312-7 © 1994 John Wiley & Sons, Inc.

B. Positive and Negative Hydration Phenomena in Aqueous Amino Acid Solutions
C. The Influence of Amino Acid Structure on Hydration
VI. Aprotic Dipolar Solvents in Aqueous Systems: Dimethyl Sulfoxide
A. The Phenomenology of Intermolecular Interactions in Aqueous Polar Nonelectrolyte Solutions
B. The Lambert–Beer Behavior of Dilute and Concentrated Aqueous Nonelectrolytes
C. The Dimethyl Sulfoxide–Water System: Nonadditivity Effects and Absorption Deficit
D. The Problem of Hydration Numbers of the DMSO Molecules in Dilute Solution
E. Intermolecular Events in DMSO-Rich Solutions
F. Suggested Model of DMSO–Water Interactions
VII. Millimeter Spectroscopy of Aqueous Alcohols
A. Aqueous Solution of Ethanol and *t*-Butanol
B. Aqueous Solution of the Aliphatic Alcohol Series
C. Hydration Effects in Polyhydroxide Compounds
VIII. Negative Hydration of Nonelectrolytes: The Ureas
A. Negative Hydration of Urea: Inhomogeneity of the Hydration Shell
B. Millimeter Spectroscopy and Other Experimental Data: Quantum Chemical and Molecular Dynamics Calculations on Urea–Water Systems
C. Water Structure Breaking by Molecular Fragments of Urea and Its Alkyl Derivatives
IX. Conclusion

RELAXATION PHENOMENA OF MAGNETIC EXCITATIONS IN FERROMAGNETIC MEDIA

S. A. NIKITOV

Institute of Radio Engineering and Electronics,
Russian Academy of Sciences,
Moscow Region, Russia

CONTENTS

List of Symbols

Part 1. Introduction: Dissipation of Energy of Magnetic Excitations in Magnetic Crystals

Part 2. General Discussion

I. Relaxation Phenomena of Spin Waves in Infinite Magnetic Media
   A. Spin–Spin Relaxation
      1. Two-Magnon Processes of Relaxation
      2. Many-Magnon Processes of Relaxation
   B. Spin–Lattice Relaxation
   C. Ion Relaxation
II. Relaxation Phenomena of Spin Waves in Thin Ferromagnetic Films
   A. Spectra of Spin Waves in Ferromagnetic Films
   B. Magnon–Magnon Relaxation: Three- and Four-Magnon Processes
   C. Magnon–Phonon Relaxation
   D. Two-Magnon Relaxation of Magnetostatic Waves
      1. Dissipation of Energy Due to the Scattering at the Surface Roughness
      2. Two-Magnon Relaxation of Magnetostatic Waves Due to the Scattering from the Defects of a Ferromagnet
      3. Direct Two-Magnon Relaxation of Magnetostatic Waves in Thin Ferromagnetic Films
      4. Two-Particle Relaxation of Magnetostatic Waves in Layered Magnetic Structures
   E. Relaxation of Magnetostatic Waves in a Ferromagnetic Film with a Thin Metal Layer on Its Surface
      1. Magnetostatic Waves in a Ferromagnetic Film Covered by a Uniform Metal Layer with Finite Conductivity
