

CONTENTS

PREFATORY CHAPTER

- The Early History of the Materials Research Laboratories,
Robert L. Sproull 1

EXPERIMENTAL AND THEORETICAL METHODS

- The Microscopy of Bulk-Grown III-V Semiconductor Materials,
G. T. Brown 123

PREPARATION, PROCESSING, AND STRUCTURAL CHANGES

- Development of High-Quality InP Single Crystals, *M. Morioka,*
K. Tada, and S. Akai 75

- Crucible-Free Methods of Growing Oxide Crystals from the Melt,
V. V. Osiko, M. A. Borik, and E. E. Lomonova 101

- Synthesis of Diamond Under Metastable Conditions,
R. C. DeVries 161

- The Science and Engineering of Large-Diameter Czochralski
Silicon Crystal Growth, *Wen Lin and K. E. Benson* 273

PROPERTIES AND PHENOMENA

- Transport in Chemical Potential Gradients of Multicomponent
Oxides, *H. Schmalzried* 149

- Interdiffusion in Amorphous Multilayered Materials, *A. L. Greer* 219

- Strength and Toughness of Ceramic Matrix Composites,
W. B. Hillig 341

STRUCTURE

- Grain Boundaries in Polycrystalline Ceramics, *David R. Clarke* 57

SPECIAL MATERIALS

- Heavy-Electron Metals, *H. R. Ott* 13

- High-Strength Concrete, *Jan Skalny and Lawrence R. Roberts* 35

- Organic Thin Films for Semiconductor Wafer Diagnostics,
S. R. Forrest, M. L. Kaplan, and P. H. Schmidt 189

- Polymer Materials for Microlithography, *E. Reichmanis and*
L. F. Thompson 235

- Metal Oxide Varistors, *Richard Einzinger* 299

- Ceramic Substrates for Microelectronic Packaging, *U. Chowdhry*
and A. W. Sleight 323
