

Cluster Representations of Nuclei*

Karl Wildermuth and Walter McClure

Contents

| | |
|--|-----|
| I. Introduction | 1 |
| II. The Ritz variational principle | 3 |
| A. The Ritz variational procedure | 3 |
| B. Considerations on trial wave functions | 5 |
| III. Oscillator cluster representation | 6 |
| A. What is a cluster | 6 |
| B. Construction of oscillator cluster wave functions | 8 |
| C. Discussion of Be^8 as an illustrative example | 11 |
| D. Effects of antisymmetrization | 18 |
| E. The application of the oscillator cluster model to the energy spectra of other light nuclei | 24 |
| IV. Generalization of the cluster wave functions | 32 |
| A. Nuclear bound states | 32 |
| B. Characteristics of generalized cluster wave functions | 41 |
| C. More detailed calculations of the matrix elements | 44 |
| D. The influence of cluster overlapping | 52 |
| E. Collective states | 70 |
| V. Nuclear reactions | 81 |
| A. General considerations | 81 |
| B. Derivation of coupled channel equations for nuclear reactions and nuclear bound states | 82 |
| C. Application to specific nuclear reactions | 92 |
| a) $\alpha - \alpha$ elastic scattering | 92 |
| b) $\alpha - \text{He}^3$ elastic scattering | 94 |
| c) $\text{Li}^6(p, \text{He}^3) \alpha$ reaction | 96 |
| D. Optical potential and nuclear reactions | 103 |
| a) Real optical potentials | 103 |
| b) Complex optical potentials | 109 |
| VI. Introduction of hard-core forces | 113 |
| A. General remarks | 113 |
| B. The ground state of Li^6 and its charge distribution | 115 |
| C. The Coulomb-disintegration of nuclei | 119 |
| VII. Qualitative considerations | 123 |
| A. Optical giant resonances in nuclear reactions | 123 |
| a) Optical resonances in nucleus-nucleus scattering | 123 |
| b) Examples of optical resonances in the incoming channel | 129 |
| c) Optical resonance phenomena in outgoing reaction channels | 131 |
| d) Examples of optical resonances in reaction channels | 132 |
| B. Nuclear fission | 134 |
| C. Coulomb energy effects | 146 |
| D. Reduced widths of nuclear levels | 152 |
| E. Gamma transition probabilities | 155 |
| F. He^3 and triton reactions in Fe^{56} | 158 |
| VIII. Conclusions | 160 |
| Appendix A | 162 |
| Appendix B | 165 |
| Appendix C | 165 |
| References | 167 |
