

Recent Developments in Lattice Theory

W. Ludwig

Contents

I. Introduction	1
II. Symmetry and Invariance Properties of the Coupling Parameters	2
1. The Potential Energy	2
2. Invariance Relations for Arbitrary Sets of Mass-points	5
3. General Invariance Relations in Ideal (Infinite) Lattices	8
4. Symmetry Relations from the Point Group Symmetries of the (Infinite) Lattice	9
5. Symmetry Relations Near Surfaces or Defects in Crystals	11
6. Transition to Macroscopic Theory and Consequences of Invariance Relations	13
III. Different Models for the Potential Energy in Crystals	26
7. General Remarks on Many-body-Potentials	26
8. The Shell-model.	39
9. Interactions in Metals	46
IV. Dynamics of Molecular Crystals	52
10. Simple Models for Molecular Motions in Perfect Crystals	52
11. General Derivation of the Equation of Motion for Molecular Crystals	62
12. Some Relations for Coupling-parameters and Derived Expressions in Molecular Crystals	67
V. Anharmonic Effects in Thermodynamical Properties	75
13. Mechanical Discussion of a Simple Linear Model	75
14. Thermodynamical Discussion of a Simple Linear Model	81
15. Thermal Expansion. Temperature Dependence of Elastic Constants	90
16. Perturbation Expansion of the Free Energy and the Specific Heat	109
17. Further Discussions of Thermodynamic Properties.	122
VI. Point Defects in Crystal Lattices	126
18. Structure of Point Defects	126
19. Change of Volume and Energy of Defects	138
20. Dynamical Properties of Defects. General Remarks. Localized Modes	144
21. The Phonon Greens Function	155
22. Scattering of Phonons at Defects	167
23. Interaction of Defects. Spectral Density of Lattices with Defects and Related Properties.	187
24. Extended Defects. Surfaces. Localized States	206
25. Scattering at Surfaces. Reflection and Transmission	218
26. Anharmonic Effects on Defect Lattice Modes	230
VII. Interaction of Phonons with Particles and Radiation	232
27. Interaction of Phonons with Thermal Neutrons	232
28. Interaction of Phonons with Emitted or Absorbed γ -Rays (Mössbauer-Effect)	261
29. Interaction of Phonons with X-rays. Thermal Diffuse Scattering	270
30. Interaction of Phonons with Infrared Light, Infrared Absorption	275
VIII. Appendix	282
31. Thermodynamic Greens Functions.	282
32. Remarks about some Theorems used in Sect. 27.	289
