

Regge Poles in Particle Physics

P. D. B. Collins and E. J. Squires

Contents

Introduction	1
Chapter I. The S -matrix	6
I.1. Introduction	6
I.2. The Postulates of S -matrix Theory	7
I.3. Bubble Notation	9
I.4. The Singularity Structure of Scattering Amplitudes	13
I.5. Crossing and the TCP -Theorem	16
I.6. The Four-line Connected Part	16
I.7. The Relation Between the Scattering Amplitude and Measurable Quantities	21
I.8. The Singularities of the Four-line Connected Part	23
I.9. The Two-particle Discontinuity	26
I.10. Single Variable Dispersion Relations	27
I.11. The Mandelstam Representation	30
I.12. The Elastic Double Spectral Function	33
Chapter II. Partial-Wave Amplitudes and Regge Poles	40
II.1. Partial-Wave Amplitudes	40
II.2. Amplitudes of Definite Signature	41
II.3. The Froissart-Gribov Projection	43
II.4. The Singularities of Partial-Wave Amplitudes	45
II.5. Unitariness of Partial-Wave Amplitudes and Phase Shifts	47
II.6. Asymptotic Behaviour and the Froissart-Gribov-Projection	50
II.7. The Froissart Bound	51
II.8. Analytic Continuation in Angular Momentum	54
II.9. The Sommerfeld-Watson Transform	55
II.10. Regge Poles	61
II.11. Singularities of Partial-Wave Amplitudes for Non-integer l	64
II.12. The Mandelstam-Sommerfeld-Watson Transform	66
Chapter III. Regge Poles and the Mandelstam Representation	70
III.1. Some Properties of the Regge Functions	70
III.2. Regge Poles and the Mandelstam Representation	76
III.3. The Chew-Jones Representation	80
III.4. The Khuri-Jones Representation	83
III.5. The Khuri Power-Series Expansion	85
III.6. The Problem of Unequal Mass Kinematics	87
III.7. "Daughter" Trajectories	94
III.8. Some Experimental Consequences	96
Chapter IV. Spin	99
IV.1. The Partial-wave Expansion for Particles with Spin	99
IV.2. Properties of $d_{\lambda\mu}^J(\theta)$ and $e_{\lambda\mu}^J(\theta)$	101
IV.3. Kinematical Singularities and Single Variable Dispersion Relations	104
IV.4. The Generalised Froissart-Gribov Projection	106
IV.5. The Sommerfeld-Watson Transform	107

IV.6 Kinematical Constraints on the Residue Functions	109
IV.7 Parity	114
IV.8 The Pomeranchon Contribution	115
IV.9 The Application of Group-theoretical Methods to Regge Theory	118
Chapter V. The Nature of J -Plane Singularities	126
V.1 The Analytic Continuation of Unitarity	126
V.2 Moving Singularities in the J -Plane	127
V.3 Cuts in the Complex Angular Momentum Plane	128
V.4 Fixed J -Plane Poles	132
V.5 Singularities in the Froissart-Gribov Integral and Superconvergence Relations	133
V.6 Gribov-Pomeranchuk Singularities	136
Chapter VI. Bootstraps	139
VI.1 The Bootstrap Hypothesis	139
VI.2 The N/D equations	142
VI.3 Inelasticity in N/D equations	150
VI.4 Particle Exchange Forces	155
VI.5 Some Simple Bootstrap Calculations	159
VI.6 The New Form of the Strip Approximation	164
VI.7 The Mandelstam Iteration	172
VI.8 Some Problems	175
Chapter VII. Perturbation Theory and Elementary Particles	177
VII.1 The Relevance of the Perturbation Expansion	177
VII.2 High Energy Behaviour of Feynman Diagrams	178
VII.3 End-Point Contributions	180
VII.4 Pinch Contributions	183
VII.5 Particles with Spin and the Reggeization of Elementary Particles	187
VII.6 Elementary Particles	189
Chapter VIII. A Survey of the Experimental Situation	193
VIII.1 The Regge Trajectories	193
a) Introduction	193
b) Meson Trajectories	193
c) Baryon Trajectories	198
VIII.2 Regge Poles and High Energies	201
VIII.3 High Energy Total Cross-Sections	204
a) Regge Poles and Total Cross-Sections	204
b) The Pomeranchuk Limit	205
c) The Contributions of other Trajectories	207
d) Fits to the Experimental Data	208
e) Forward Dispersion Relation Sum Rules	211
VIII.4 Inelastic Cross-Sections in the Forward Direction	213
a) Introduction	213
b) Pomeranchon Exchange Possible	214
c) Non-Strange Meson Exchange Possible, P Impossible	216
d) Strange Meson Exchange Possible	218
e) Baryon Exchange Possible	218
f) No Known Trajectories Can be Exchanged	218
VIII.5 The Phase of the Forward Amplitude	219
a) The Regge Pole Prediction	219
b) Some Experimental Tests	220
c) Other Ways of Obtaining the Regge Prediction	222
VIII.6 The Angular Dependence of Differential Cross-Sections	223
a) Regge Poles and Differential Cross-Sections	223
b) π -N Charge Exchange Scattering and the ρ Trajectory	227
c) The A_2 Trajectory in $\pi^-p \rightarrow \eta^0n$	232
d) Other Meson-Nucleon Charge Exchange Processes	234
e) Fermion Trajectories in Backward π -p Scattering	235

f)	Pion Exchange NN and \overline{NN} Charge-Exchange Scattering	235
g)	Elastic Scattering	239
h)	Production Processes	245
i)	Regge Cuts	246
VIII.7	Polarization and Spin Density Matrices	250
a)	Polarization and Regge Poles	250
b)	Polarization in $\pi^-p \rightarrow \pi^0n$	251
c)	Polarization in Other π -N Elastic Scattering Processes	253
d)	Spin Structure in NN Scattering	254
e)	Density Matrices in Terms of Cross-Channel Helicity Amplitudes	254
f)	Density Matrices in $\pi N \rightarrow \rho N$ and $\pi N \rightarrow \rho \Delta$	255
VIII.8	Lower Energies and Interference with Direct Channel Resonances.	256
VIII.9	Straight-Line Trajectories and Exchange Degeneracy	264
a)	The Dynamics of Straight-Line Trajectories	264
b)	The Quark Model for Trajectories	266
VIII.10	Applications of Superconvergence Relations	268
VIII.11	Electromagnetic and Weak Processes	272
Postscript (January, 1968)	276
(i)	Daughters, Conspiracies and $O(4)$	276
(ii)	Zeros of Residues	276
(iii)	Cuts	277
(iv)	Infinitely Rising Trajectories	277
(v)	Sum Rules	278
(vi)	Bootstraps	278
References	279
Subject Index	289
Index of Scattering Processes	292
