Electron Scattering, Photoexcitation, and Nuclear Models

H. ÜBERALL

Contents

Abstract	1
General Introduction	2
Kinematics of Photoexcitation and Electron Scattering	2
Calculation of Cross Sections in Born Approximation	6
Form Factors in Elastic Electron Scattering	18
Quasielastic Scattering	20
Excitation of Levels Below the Giant Resonance	22
Nondynamic Analysis.	22
Dynamic Analysis	28
The Goldhaber-Teller and Steinwedel-Jensen Models for the Giant Resonance	36
The Goldhaber-Teller Model.	39
The Steinwedel-Jensen Model	52
The Steinwedel-Jensen Model for a Deformed Nucleus	58
Coupling of Giant Resonance and Surface Vibrations	61
Particle-Hole Model of the Giant Resonances	65
Phenomenological Models	76
<i>Helm's Model and its Generalization</i>	77
<i>Tassie's Model</i>	84
Conclusion	86
Acknowledgements	86
References	86

Baryon Current Solving $SU(3)$ Charge-Current Algebra*

HAGEN KLEINERT**

Contents

Abstract	90
I. Introduction	91
II. Brief Review of Group Dynamics	92
III. The Infinite Momentum Limit	96
IV. Factorizing Saturation	98
V. Non-factorizing Saturation	99
VI. The $O(4,2)$ Current	108
VII. Solution of the Full Chiral $SU(3) \times SU(3)$ Charge-Current Algebra	123
VIII. Conclusion	125
References and Footnotes	126
App. A: The $SU(3) \times SU(3)$ Algebra	128
App. B: The Degenerate $O(4,2)$ Representations	131
App. C: Calculation of the Matrix Elements of the Current	137
App. D: Form Factors	140
App. E: Spacelike Solutions	145
