Conformal Invariance and the Energy-Momentum Tensor[†]

J. WESS

Contents

I. The Conformal Group	1
II. Low Energy Theorem for Gravitons	4
III. Conformal Invariance and Effective Lagrangians	6
IV. Invariant Lagrangian for a Scalar Field	15
References	17

Representations of the Local Current Algebra

A Constructional Approach*

RUI V. MENDES¹ and YUVAL NE'EMAN

Contents

Introduction	18
A. The Representations of the Current Algebra without Constraints	22
B. The Construction of Physical Spaces	24
C. The Problem of Covariance	26
References	30

Chiral Symmetry

An Approach to the Study of the Strong Interactions

M. WEINSTEIN

Contents

Abstract	32
1. Notation	34
2. The Goldberger-Treiman Relation.	36
3. Symmetries – Conventional vs. Goldstone Basic Assumptions	42
4. Phenomenological Lagrangians	54
5. Beyond the Zeroth Approximation	62
6. $SU(3) \otimes SU(3)$ and Weak and Electromagnetic Processes	69
References	73

Dual Quark Models*

K. DIETZ

Contents

1. Introduction	74
2. Quark Diagrams	75
3. Inclusion of Quark Spin	78
4. <i>L</i> -Excitations	82
5. Elimination of Ghosts	84
6. Summary	89
References	89

High Energy Inclusive Processes^{★ ★}

CHUNG-I TAN

Contents

I.	91
II. Inclusive Cross Sections as Discontinuities	94
III. Mueller's Regge Hypothesis	97
IV. Dual Resonance Model	98
V. Multiperipheral Models	102
VI. Conclusion	105
Footnotes and References	105

Deep Inelastic Electron-Nucleon Scattering*

J. DREES

Contents

1. Introduction	107
2. The Experimental Data	110
2.1 Inelastic Electron-Proton Scattering	110
2.2 Inelastic Electron-Deuterium Scattering	120
2.3 Comparison with Muon-Scattering	122
3. Interpretation of the Data	123
3.1 The Parton Model	123
3.2 Connection to Resonance Excitation and Non-Diffractive Models	126
3.3 Regge-Pole Analysis	131
4. Connections to other Processes	132
5. Conclusion	134
References	135

Hyperon-Nucleon Interaction*

J. J. DE SWART, M. M. NAGELS**, T. A. RIJKEN and P. A. VERHOEVEN

Contents

I. Introduction	138
II. Channels and Thresholds	140
III. Baryon-Baryon Scattering and $SU(3)$	141
IV. The Number of Independent Amplitudes	144
V. Relativistic Amplitudes	145
VI. Center of Mass Amplitudes	148
VII. Helicity Amplitudes	150
VIII. Dispersion Approach	152
IX. Analyticity Domains of the Partial Wave Scattering Amplitudes	154
X. Potential Approach	156
XI. Construction of a $B-B$ Potential	157
XII. Ranges of the Potentials	160
XIII. The Schrödinger Formalism for Coupled Channels	161
XIV. Charge Symmetry Breaking	165
XV. Hyperfragments	169
XVI. Interaction of Λ -Hyperon with Nuclear Matter	175
XVII. Final State Interactions	177
XVIII. Λ -Nucleon Scattering	178
XIX. $\Sigma^+ p$ Scattering	187
XX. $\Sigma^- p$ Scattering	190
XXI. Effective Range Analysis	193
XXII. Discussion	199
References	200

How Important are Regge Cuts?*

P. D. B. COLLINS

Contents

Abstract	204
I. Introduction	205
II. Regge Cut Theory	205
III. Regge Cut Models	212
a) Complex Trajectories	212
b) The Eikonal/Absorption Model	214
IV. Where Does the Regge Pole Model Fail	219
a) The Serpukhov Total Cross Sections	221
b) The Cross-Over Zero	221
c) The Forward Peak in $\pi -$ Exchange Processes	222
d) Dip Systematics	222
e) The $\pi^- p \rightarrow \pi^0 n$ Polarization	224
f) Line Reversal Symmetry	224
V. Can Cuts Make Good the Deficiencies of Poles?	224
a) The Serpukhov Total Cross-Sections	224
b) The Cross-Over Zero	225
c) Forward Peaks in π -Exchange Processes	225
d) Dip Systematics	226
e) The $\pi^- p \rightarrow \pi^0 n$ Polarization	227
f) Line Reversal Symmetry	228
g) Elastic Polarization	228
VI. Conclusions	230
References	231
