Canonical Light-Cone Commutators and Their Applications	
R. JACKIW	1
Local Saturation of Commutator Matrix Elements	
H. D. DAHMEN	29
Duality in Deep Inelastic Electroproduction	
P. V. LANDSHOFF	37
Parton Models of Inelastic Lepton Scattering	
C. H. LLEWELLYN SMITH	51
Duality for Real and Virtual Photons	
H. R. RUBINSTEIN	72
Scaling in Deep Inelastic Scattering with Fixed Final States	
V. RITTENBERG	92
Duality and the Pion Electromagnetic Form Factor	
K. HUANG	98
Deep Inelastic Hadronic Scattering in Dual-Resonance Model	
K. HUANG	107
Low Energy Theorems and Photo- and Electroproduction near Threshold by Current Algebra	
G. FURLAN, N. PAVER, and C. VERZEGNASSI	118

Canonical Light-Cone Commutators and Their Applications

ROMAN JACKIW*

Contents

I. Introduction	1
II. Light Cone Current Commutators	2
A. Light Cone Quantization	3
B. Derivation of Current Commutators	7
C. Non-Canonical Contributions	10
D. $SU(3)$ Generalization	12
E. BJL Theorem on the Light Cone	13
III. Application to Deep Inelastic Processes	13
A. Scaling Representation	14
B. Equal Time Sum Rules	14
C. Light Cone Sum Rules	15
IV. Fixed-Mass Sum Rules	17
A. Kinematic Preliminaries	18
B. Infinite Momentum Derivation of Sum Rules	19
C. Light Cone Derivation of Sum Rules	20
D. Measuring Bilocal Operators	23
V. Conclusion	25
References	27

Local Saturation of Commutator Matrix Elements

HANS D. DAHMEN

Contents

Introduction	29
1. Local Saturation	29
2. Saturation to First Order	32
3. Saturation to Second Order	33
4. Conclusion	35
References	35

Duality in Deep Inelastic Electroproduction

P. V. LANDSHOFF

Contents

Introduction	37
Quark-Parton Model	38
Muon-Pair Production	43
Veneziano-like Models	45
References	50

Parton Models of Inelastic Lepton Scattering[★]

C. H. LLEWELLYN SMITH

Contents

1. Introduction and Outline	51
2. Preliminary Remarks	52
a) Electroproduction	52
Kinematics	52
Scale Invariance	53
b) Neutrino Production	54
Scale Invariance	58
3. Parton Model	58
a) Intuitive Derivation	58
b) Parton Model Calculations	60
4. The Quark Parton Model	62
a) A Difficulty	62
b) General Results of the Quark Parton Model	63
5. Formal Derivations	66
6. Miscellaneous Remarks	70
a) Other Processes	70
b) Parton Models and Local Duality	70
Acknowledgements	70
References and Footnotes	70

Duality for Real and Virtual Photons*

HECTOR R. RUBINSTEIN

Contents

Introduction	72
Kinematics and Limiting Properties of the Structure Functions	73
Fixed q^2 Duality	75
Duality in the Whole $\nu - q^2$ Plane	81
Extension of Local Duality as a Function of q^2	84
Connection with Photoproduction	88
References	90

Scaling in Deep Inelastic Scattering with Fixed Final States^{★ **}

V. RITTENBERG

Contents

1. Introduction	92
2. Application of Light Cone Expansion for one Particle Electroproduction	93
3. Generalization for many Particles Production	95
References and Footnotes	97

**Low Energy Theorems
and Photo- and Electroproduction
Near Threshold by Current Algebra**

G. FURLAN, N. PAVER, and C. VERZEGNASSI

Contents

I. Introduction 118

 a) Algebraic Properties 119

 b) Conservation Properties 119

II. Low Energy Theorems 122

 a) A Simple Formalism for Low Energy Pion Physics 122

 b) Pion-Nucleon Scattering 126

III. Electroproduction at Threshold 129

IV. Low Energy Electroproduction and Concluding Remark 136

Appendix 144

 The Cluster Decomposition 144

References 146
