On the Properties of Matter in Neutron Stars*

GERHARD BÖRNER

Contents

1. Introduction	2
2. Qualitative Description of the Interior of a Neutron Star	6
2.1. Validity of the “Isotropic Fluid” Approximation	6
2.2. Qualitative Picture of the Interior	6
3. Atmosphere and Surface of a Neutron Star	8
3.1. The Atmosphere	8
3.2. The Surface	9
4. Nuclear and Solid State Physics in the Crust	13
4.1. The Range of the Densities Below the Neutron Drip Line	13
4.2. Neutron Drip Line to Break-Up of Nuclei	16
4.3. Superfluidity	20
4.4. Observational Evidence for Solid State Phenomena in Pulsars	21
5. The Liquid Interior	24
6. The Hyperon Core	26
6.1. General Remarks	26
6.2. The “Bootstrap” Approach	27
6.3. Manybody Treatment of a Hyperon Gas	29
6.4. Model of a Lattice of Baryons	31
6.5. Conclusion	32
7. Neutron Star Models and Pulsar Observations	33
7.1. Einstein’s Equations	33
7.2. Properties of Neutron Star Models	35
7.3. The Crab Pulsar	40
7.4. The Vela Pulsar	43
8. Neutron Stars Accreting Matter	44
8.1. The Eddington Limit	44
8.2. Accretion Rates	46
8.3. The Death of Pulsars	47
8.4. The Accretion Process in Detail	49
8.5. Change of the Surface Composition by Accretion	52
8.6. X-Ray Emission	56
8.7. Gamma Radiation Emission	61
References	64

Black Holes: The Outside Story

JOHN STEWART and MARTIN WALKER

Contents

Introduction	69
1. Motivation	70
2. Coordinate System and Tetrads	72
2.1. The Boyer-Lindquist Coordinate System	72
2.2. The Interpretation of the Kerr Field	75
2.3. Locally Non-Rotating Frames	76
2.4. The Ergosphere	77
3. Test Particle Trajectories in the Kerr Field	78
3.1. First Integrals of the Equations of Motion	78
3.2. General Features of the θ -motion	81
3.3. General Features of the r -motion	84
3.4. Motion in the Equatorial Plane	87
4. Tidal Forces	92
4.1. The Basic Theorem	92
4.2. Tidal Forces in Circular Equatorial Orbits	95
4.3. The Roche Problem	100
4.4. Astrophysical Examples	102
4.5. Gravitational Synchrotron Radiation	103
5. Perturbations of the Kerr Field	104
5.1. Introduction	104
5.2. Gauge Invariance	106
5.3. Decoupling of the Perturbation Equations	108
References	113
