

Quantum Statistical Theories of Spontaneous Emission and their Relation to Other Approaches

G. S. AGARWAL

Contents

1. Introduction	2
2. Interaction Hamiltonian	4
3. Weisskopf-Wigner Method	9
4. Heitler-Ma Method	14
5. Goldberger-Watson Method.	17
6. Quantum Statistical Method: Master Equations	25
7. Quantum Statistical Properties of the Radiation Field	38
8. Langevin Equations Corresponding to the Master Equation (6.53) and a c -Number Description	43
9. Perturbative Results	54
A) Small Samples	54
B) Large Samples	55
Transitions $S_2 - S_1 = 0, S_1 = \frac{1}{2}N$	56
Transitions $S_2 - S_1 = -1, S_1 = \frac{1}{2}N$	57
10. Spontaneous Emission from a Single Two-Level Atom	60
11. Spontaneous Emission from Two Two-Level Atoms	63
12. Emission from a System of Harmonic Oscillators	66
A) Initial Excitation Given by $\varrho(0) = \{z_0\}\rangle \langle \{z_0\} $	71
B) Initial Excitation Given by the Fock State ψ_m	71
13. Emission from a Small Sample of Two-Level Atoms; Master Equation: Exact Solution	73
14. Emission from a Small Sample of Two-Level Atoms: Approximate Solution of the Master Equation and the Langevin Equation	84
15. Master-Equation Treatment of Spontaneous Emission from a Multilevel Atom	88
A) Three-Level Atom with Equidistant Spectrum	93
B) Three-Level Atom with Degenerate Spectrum	94
16. Neoclassical Theory of Spontaneous Emission	97
17. Spontaneous Emission in Presence of a Thermal Field.	105
18. Spontaneous Emission in Presence of External Fields	108
Appendix A. Role of Rotating-Wave Approximation in Spontaneous Emission	115
Appendix B. Mori's Generalized Langevin-Equation Treatment of Spontaneous Emission	118
Appendix C. Steady-State Solution of the Master Equations from the Viewpoint of Microreversibility	123
