

Excitons at High Density

Edited by H. HAKEN and S. NIKITINE

Contents

I. Introduction

Survey. H. HAKEN and S. NIKITINE	2
Introduction to Exciton Spectroscopy. S. NIKITINE	5

II. Biexcitons

Properties of Biexcitons. S. NIKITINE	18
Biexcitons—Bose Condensation and Optical Response. E. HANAMURA	43

III. Electron-Hole Droplets

Properties of Electron-Hole Drops in Germanium Crystals. V. S. BAGAEV	72
Theory of Electron-Hole Drops in Germanium and Silicon. T. M. RICE	91

IV. Biexcitons and Droplets

Spectroscopic Study of Exciton-Exciton Interaction (Biexcitons, Drops) in Semiconducting Crystals. B. V. NOVIKOV	106
Exciton Condensation in Germanium. A. A. ROGACHEV	127

V. Special Optical Properties of Excitons at High Density

Gigantic Oscillator Strength Inherent in Exciton Complexes. E. I. RASHBA	150
Interaction between Excitons at High Concentration. R. LEVY, A. BIVAS, J. B. GRUN, and S. NIKITINE	171

VI. Laser Action of Excitons

Theory of Stimulated Emission by Excitons. H. HAKEN and S. NIKITINE	192
Experimental Investigation on the Competition of Stimulated Emissions Involving Excitons. R. LEVY, J. B. GRUN, and S. NIKITINE	211
Experimental Studies of Excitons at High Densities. K. L. SHAKLEE	221

VII. Excitonic Polaritons at Higher Densities

Tests of Validity of Spatial Dispersion Theories on Lead Iodide Crystals Spectra. M. GROSMANN, J. BIELLMANN, and S. NIKITINE	242
Medium and High Polariton Densities. H. MAHR	265
Polaritons at High Intensities and in Bose Condensed Exciton Systems. H. HAKEN, J. GOLL, and A. SCHENZLE	285
Subject Index	297
Classified Index of Authors and Titles	299
