Compton Scattering

By *H. Rollnik and P. Stichel*. With 16 Figures

1.	Compton Scattering in the Resonance Region	1
1.1	Forward Scattering: Low-Energy Theorems, Dispersion Relations and Sum Rules	1
1.2	Kinematics	9
1.3	Invariant Amplitudes	14
1.4	Crossing and Analyticity	20
1.5	Details About the Low-Energy Theorems	23
1.6	Experimental Data in the Low-Energy and Resonance Region	26
2.	High-Energy Compton Scattering	31
2.1	Gross Features of the Experimental Data	31
2.2	Regge Model	34
2.3	Fixed Poles	41
	Appendix	49
	References	51

Status of Interference Experiments with Neutral Kaons

By *E. Paul*. With 21 Figures

1.	Introduction	53
2.	Interference Effects in a Beam of Coherent K_S^0 and K_L^0 and Possibilities of Measuring Them	57
2.1	Weak Decays and K^0 - \bar{K}^0 Mixing	57
2.2	Interference in the Pionic Decay Modes Based on CP Violation	67
2.3	Interference in the Semileptonic Decay Modes Based on a Violation of the $\Delta S = \Delta Q$ Rule	74
2.4	Interference with Regenerated K_S^0	80

3.	K_S^0 Lifetime	83
3.1	Recent Measurements	83
3.1.1	The CERN-Oslo-SACLAY Experiment	83
3.1.2	The CERN-Heidelberg Experiment	91
3.2	Comparison with Previous Measurements	95
3.3	Possibilities for Further Improvements	98
4.	$(K_L^0 - K_S^0)$ Mass Difference	98
4.1	Methods Used for Determining the Mass Difference	98
4.2	Experimental Results	104
5.	Measurement of CP Violation in the Two-Pion Decay Modes	105
5.1	Experimental Situation for Decays into $\pi^+ \pi^-$ and $\pi^0 \pi^0$	105
5.1.1	Results for $ \eta_{+-} $ and $ \eta_{00} $	105
5.1.2	Results for ϕ_{+-} and ϕ_{00}	107
5.2	Isospin Analysis	109
6.	Search for CP Violation in the Three-Pion Decay Modes	110
6.1	Experimental Situation for Decays into $\pi^+ \pi^- \pi^0$	110
6.2	Experimental Situation for Decays into $\pi^0 \pi^0 \pi^0$	114
7.	Test of the $\Delta S = \Delta Q$ Rule in the Semileptonic Decay Modes	115
7.1	Results for Decays into $\pi^- e^+ \bar{\nu}$ and $\pi^+ e^- \bar{\nu}$	115
7.2	Results for Decays into $\pi^- \mu^+ \bar{\nu}$ and $\pi^+ \mu^- \bar{\nu}$	118
7.3	Charge Asymmetry Measurements	119
8.	Analysis of the CP Violation Data Considering Unitarity	120
8.1	Formulation of the Unitarity Condition by Bell and Steinberger and Its Application	120
8.2	T Non-Invariance and CPT Invariance	123
9.	Possibilities of Explaining CP Violation	126
9.1	Classification of Sources	126
9.2	Description by Models on Superweak Interactions ($\Delta Y = 2$)	128
9.3	Description by Other Models	134
9.3.1	$(\Delta Y = 1)$ Models	134
9.3.2	$(\Delta Y = 0)$ Models	136
10.	Summary	138
	References	142
