

Contents

1. Introduction and Survey	1
2. Harmonic Approximation and Linear Response (Green's Function) of an Arbitrary System	4
2.1 The Adiabatic Potential and Its Invariances	5
2.2 The Harmonic Approximation	7
2.2.1 Expansion in Powers of the Displacements	7
2.2.2 Symmetries and Meaning of the Force Constants ϕ_{ik}^{mn}	8
2.2.3 Representation of the Coupling by Its Eigenvectors and Eigenvalues, Stability	9
2.2.4 Dynamics	10
2.3 Dynamics of the One-Dimensional Harmonic Oscillator	11
2.3.1 Equation of Motion and Solutions	11
2.3.2 Green's Function	13
2.3.3 Thermal Averages, Displacement-Displacement Correlation Function	14
2.4 Dynamics of an Assembly of Atoms	16
2.4.1 Dynamical Matrix	16
2.4.2 Green's Functions	17
2.4.3 Kramers-Kronig Relations	18
2.4.4 Thermal Averages, Displacement-Displacement Correlation Functions	18
2.5 Statics	20
2.5.1 Discussion of Static Green's Function	20
2.5.2 Green's Function for Invariant Force Patterns	21
2.5.3 Response for Given Surface Displacements	21
2.5.4 Variational Methods	24
3. Lattice Theory	27
3.1 Periodic Structures	28
3.1.1 The One-Dimensional Lattice	28
3.1.2 Three-Dimensional Bravais Lattices	29

3.2	Lattice Symmetries	32
3.2.1	The Linear Bravais Lattice	33
3.2.2	Three-Dimensional Bravais Lattices	36
3.2.3	Point Symmetries	38
3.2.4	Reduction of the Force Constant Matrix and Its Fourier Transform for Cubic Symmetry	40
3.3	Lattice Waves	44
3.3.1	The Linear Lattice	45
3.3.2	Dispersion Curves in Three-Dimensional Lattices	50
3.3.3	Born-von Karman Models in Cubic Lattices	51
3.4	Models for Force Constants	55
3.4.1	Two Body Forces	56
3.4.2	Many Body Potentials	59
3.4.3	The Bond Charge Model	59
	a) In one dimension	60
	b) A simple two-dimensional example	64
	c) Three-dimensional bond charge lattices with purely local response	66
3.4.4	Simple Shell Models	67
	a) In one dimension	67
	b) Three-dimensional shell lattices	69
3.5	Green's Functions, $G^{(h)}(\omega)$	69
3.5.1	The Physical Meaning of Green's Functions	69
3.5.2	A Simple One-Dimensional Example	71
3.5.3	The Motion of One Lattice Atom Under a Force	73
3.5.4	Expansions for High and Low Frequencies	80
	a) The expansion of $G^{(o)}(\omega)$ for high frequencies	80
	b) The expansion of $G^{(h)}(\omega)$ for large ω	81
	c) The behaviour of $G^{(o)}(\omega)$ for small ω	83
	d) The slow motion of an isotopic defect	84
	e) The expansion of $G^{(h)}(\omega)$ for small ω	86
3.5.5	Asymptotic Expansion of $G^{(h)}(\omega)$, ($h \gg 1$)	86
	a) The linear chain with 1st neighbour spring f	87
	b) Simple examples of asymptotic expansions	87
	c) The asymptotic expansion of the linear $G^{(h)}(\lambda > \lambda_{\max})$	90
	d) The expansion of the linear $G^{(h)}(0 \leq \omega \leq \Omega_{\max})$	93
	e) The expansion of the three-dimensional $G^{(h)}(\omega)$	94
3.5.6	Numerical Values for $G^{(h)}(\omega)$	97
3.5.7	Displacement-Displacement Correlation Functions	100

4. Continuum Theory	101
4.1 The Strain Tensor	102
4.1.1 General Strain as a Symmetrical Tensor of 2nd Rank	102
4.1.2 Voigt's Notation	104
4.1.3 Representation by Six Orthonormal Basis Tensors (Adapted to Cubic Symmetry)	107
4.2 The Stress Tensor	111
4.2.1 Stress Tensor and Surface Forces	111
4.2.2 Conservation of Linear and Angular Momentum, Equation of Motion	112
4.2.3 Representation of the Stress by the Basis Tensors of Section 4.1.3	113
4.2.4 Statics	114
4.3 Harmonic Theory	115
4.3.1 Linear Stress-Strain Relations	115
4.3.2 The Elastic (Potential) Energy	115
4.3.3 The Elastic Moduli in Voigt's Notation	116
4.3.4 The Equation of Motion	117
4.3.5 Cauchy Relations	119
4.4 Cubic Symmetry	120
4.4.1 Elastic Moduli, C , for Cubic Symmetry	120
4.4.2 Eigentensors and Eigenvalues of C	121
4.4.3 The Equation of Motion	126
4.4.4 A Survey of the Elastic Data	126
4.5 Hexagonal Symmetry	129
4.5.1 Simple Hexagonal Lattices	129
4.5.2 The Elastic Data of Hexagonal Metals	131
4.5.3 The Eigenstates of C	132
4.6 Dynamics in Infinite Crystals, Elastic Waves	133
4.6.1 The Equations of Motion	133
4.6.2 Elastic Waves	134
4.6.3 Cubic Crystals	135
4.7 Green's Functions	137
4.7.1 The Representation of Green's Functions	137
4.7.2 The Physical Meaning of Green's Functions	138
4.7.3 The Simplest Models	139
4.8 The Static Response $G(\underline{r},0)$	141
4.8.1 The Static Response in an Infinite, Homogeneous Medium	142
4.8.2 Cubic Symmetry	143
4.8.3 Double Force Tensor of a Force Distribution in an Infinite Medium	145

4.8.4	The Volume Change ΔV of a Finite Crystal	147
4.8.5	Local, Microscopic Displacements Derived from the Macroscopic Volume Change ΔV	150
4.8.6	Homogeneous Stresses	155
4.8.7	Variational Methods	157
4.8.8	Interaction Energies	160
	a) The total potential energy for given forces	160
	b) The interaction of a defect (P at R) with external (surface) forces	161
	c) Two defects in an infinite medium	162
	d) The force on a defect	163
4.8.9	Surface Effects, Images	164
4.9	Anharmonicity	167
5.	Transition from Lattice to Continuum Theory	171
5.1	Infinite Lattice	172
5.2	Finite Crystals	172
5.3	Simple Born-von Karman Models in Cubic Crystals	174
5.4	Two Body Potentials	178
5.5	Remarks on the Problem of Microscopic Stresses	180
5.6	The Change of Elastic Data by Single Tetrahedral Bond Charges	184
6.	Statics and Dynamics of Simple Single Point Defects	186
6.1	Simple Defect Structures	187
6.2	Static Structure	189
6.3	Simple Models for Defects	192
6.3.1	The Isotopic Defect	192
6.3.2	The Vacancy	193
6.3.3	Simple Substitutional Defects	196
6.3.4	The Octahedral Interstitial	196
6.3.5	The Tetrahedral Interstitial	198
6.3.6	The "Diatomic Defect"	198
6.4	Scattering by Defects	199
6.4.1	The Scattering Problem and Its Formal Solution	199
6.4.2	The t-Matrix for Simple Defects	201
6.4.3	The Emission of Energy by the Scattered Wave	206
6.4.4	The Differential Cross Section	207
6.4.5	Cross Sections and Spectra for the Isotopic Defect	208
6.4.6	The Cross Section for the Diatomic Defect	217
6.5	Scattering by Defects with Additional Coordinates	219
6.5.1	Original, Augmented and Defect Spaces	219
6.5.2	Green's Function G	221
6.5.3	The Octahedral Interstitial	222

6.5.4	Green's Function of the Interstitial Region, G_{aa}	223
6.5.5	Green's Function of the Host, G_{00}	225
6.5.6	Scattering	225
6.5.7	Cross Sections for Small ω	226
6.6	Static Scattering	226
6.6.1	Static Scattering Theory	227
6.6.2	Induced Kanzaki Forces and the Induced Double Force Tensor..	227
6.6.3	The Change of Elastic Moduli	229
6.6.4	The (Dia)elastic Polarizability of Simple Defects	229
6.7	Paraelastic Effects	232
6.8	Remarks on General Localized and Resonant States	235
6.8.1	The Isotopic Defect	235
6.8.2	Spring Changes	235
6.8.3	The General Procedure	236
6.8.4	Analogy to Quantum Theory	237
7.	Scattering of Neutrons and X-rays by Crystals	238
7.1	Energy and Momentum Transfers in Scattering	238
7.2	Scattering of Neutrons by a Fixed Potential	239
7.3	Scattering of Neutrons by Crystals	241
7.4	X-ray Scattering	243
7.5	The Differential Cross Section for Neutron Scattering	244
8.	Probability, Distributions and Statistics	249
8.1	A Game of Dice	249
8.2	The Simplest Tchebitchev Estimate	254
8.3	Occupation Numbers	257
8.4	Mass and Coupling of the Defect Crystal	260
8.5	Simple Examples of Microscopic and Macroscopic Quantities	261
8.5.1	Change of "Lattice Distance" in a Linear Crystal	261
8.5.2	Elastic Stiffness and Compliance of a Linear Chain with Defect Springs	262
8.6	The Intensity of Diffuse Scattering by a Macroscopic Alloy Crystal is a Microscopic Quantity	263
8.7	Expansions in Powers of Concentration	267
9.	Properties of Crystals with Defects in Small Concentration	270
9.1	X-ray Scattering	271
9.2	The Average Green's Function	274
9.3	The Change of Elastic Data	279
9.4	Neutron Scattering Theory	280
9.4.1	Isotopic Defects with Small Mass Change	281
9.4.2	Small Concentrations	281
9.4.3	Dispersion Curves of Crystals with Isotopic Defects	284

Appendix	288
A. Translation and Rotation in Three Dimensions	288
B. Vectors and Linear Operators	289
B.1 Vectors in Three-Dimensional Space	289
B.2 Linear Operators in Three-Dimensional Space	290
B.3 Symmetrical Operators	291
B.4 Rotations, Orthogonal and Unitary Operators, Complex Vector Space ..	293
B.5 Functions of Hermitean or Unitary Operators	294
B.6 Change of Basis	295
B.7 Higher-Dimensional Vector Spaces	296
C. Fourier Transforms	296
C.1 Definition	296
C.2 Examples	297
C.3 Applications	297
C.4 Green's Function of the One-Dimensional Oscillator	298
D. Diatomic Molecule	300
D.1 One-Dimensional Motion	300
D.2 The Time-Dependent Green's Function	302
D.3 Three-Dimensional Motion	303
E. Fourier Series	304
F. Non-Orthogonal Basis	305
G. Singularities in the Spectrum	306
H. The Low- ω Expansion of $\text{Re}\{G^{(0)}(\omega)\}$	311
I. The Operator $D = \Omega^2$ in Continuum Theory	312
J. Transformation of Tensors Under Rotations	313
J.1 General Transformation of a n-th Rank Tensor	313
J.2 Scalars and Vectors	314
J.3 Tensors of 2nd Rank	314
J.4 Symmetrical Tensors of 3rd Rank	315
J.5 The 4th Rank Tensor of Elastic Moduli	315
J.6 Cubic Rotations	315
K. Rotational Symmetries and Isotropic Behaviour of a Tensor	315
L. Dislocation Loops	316
M. Core Displacements for Simple Lattice Models of a Dilatation Center	318
N. Interaction Between Two Dilatation Centers in a Cubic Lattice	320
O. Two Possible Displacements with Identical Surface Forces for the Unstable Isotropic Model	321
P. Simple "Shell" Examples for Resonant and Localized Modes of Defects with Additional Degrees of Freedom	322
