

Contents

1. Introduction	1
1.1 Properties of the Virtual Photon	2
1.2 Currents and Hadrons	4
1.3 The Electroproduction Cross Section	6
2. Quantities of Physical Interest	9
2.1 Definitions	11
2.1.1 The Pion Electromagnetic Vertex	11
2.1.2 The Nucleon Electromagnetic Vertex	12
2.1.3 The Nucleon Axial Vertex	13
2.1.4 The N- Δ Electromagnetic Transition	14
2.1.5 The N- Δ Axial Vector Transition	16
2.2 Possible Sources of Information	17
2.2.1 Information on the Pion Form Factor and the Pion Root-Mean-Square Radius	19
2.2.2 Information on the Electromagnetic Form Factors of the Nucleon	21
2.2.3 Information on the Axial Vector Form Factors of the Nucleon and of the N- Δ Transition	23
3. Theoretical Approaches	26
3.1 Introduction: The Theoretical Ingredients	26
3.2 General Properties of the Electroproduction Amplitude	29
3.3 Dynamical Models	36
3.4 The Role of the Pion	38
3.5 Low-Energy Electroproduction and Current Commutators	44
4. Main Features of the Experiments, Preliminary Tests and Measurements	57
4.1 The Experimental Methods	57
4.1.1 The Wide Angle Bremsstrahlung	58
4.1.2 Typical Double-Arm Experimental Setups	59
4.1.3 The Main Corrections	63

4.2	Test of the One-Photon Exchange Approximation	63
4.3	Virtual Photon Total Cross Section	65
4.4	Separation of σ_L and σ_T from Single-Arm Experiments	67
5.	Hadron Form Factors from Electroproduction	69
5.1	The Neutron Electromagnetic Form Factors	69
5.2	The Charged Pion Electromagnetic Form Factor	72
5.3	Neutral Pion Electroproduction	83
5.3.1	The Electroproduction of π^0 Near Threshold	83
5.3.2	The Electroproduction of π^0 in the First Resonance Region	86
5.3.3	Interpretation of the Angular Distributions	87
5.3.4	Determination of the N- Δ Transition Form Factor	90
5.4	The Weak Form Factors of the Nucleon	92
5.4.1	The Experiments	93
5.4.2	The Total Virtual Photon Cross Section	94
5.4.3	The Angular Coefficients	95
5.4.4	The Separation of σ_L from σ_T at Threshold	97
5.4.5	Determination of $G_A(t)$	98
6.	Other Developments	107
6.1	The Inverse Electroproduction Process	107
6.2	Electroproduction of the $\pi\Delta$ State Near Threshold	113
6.3	Electroproduction of η and k Mesons	118
6.4	Electroproduction with Polarized Beams and Polarized Targets	123
	Appendix A: Kinematical Relations	127
	Appendix B: The Leptonic Part of the Differential Cross Section	137
	Appendix C: Multipole Expansion	143
	Appendix D: Regge Behavior and Gauge Invariance	149
	References	153
