

Contents

1. Introduction	1
2. Interaction and Rotational Potentials	5
2.1 Rotational Degrees of Freedom	5
2.2 Chemical Bonding	5
2.3 Intermolecular Interaction	7
2.4 Single Particle Potential	8
2.5 Classification of Single Particle Rotation	9
2.6 Static Orientational Potential V_{st}	10
2.6.1 Electrostatic Origin of V_{st}	10
2.6.2 Valence and Dispersion Forces	12
2.6.3 Expansion into Symmetry-Adapted Functions with One, Two and Three Angular Degrees of Freedom	13
3. Neutron Scattering	17
3.1 Formulation Based on Transition Matrix Elements	17
3.2 Formulation Based on Classical Self-Correlation Functions	20
4. Stochastic Rotational Motion	25
4.1 General Aspects	25
4.2 Continuous Rotational Diffusion	26
4.3 Examples for the Limit of Rotational Diffusion	29
4.3.1 $\text{Ni}(\text{NH}_3)_6\text{I}_2$	29
4.3.2 n-Paraffins ($\text{C}_{33}\text{H}_{68}$)	33
4.4 Rotational Jump Model	35
4.5 Reorientations in Ammonium Salts	38
4.5.1 $(\text{NH}_4)_2\text{SnCl}_6$	38
4.5.2 Ammonium Chloride (NH_4Cl)	42
4.6 Diffusion in the Presence of a Potential	44

5. Rotational Excitations at Low Temperatures I. Principles	47
5.1 Rotational States	48
5.1.1 One-Dimensional Rotation and Exact Methods	48
5.1.2 Approximate Methods	52
5.1.3 Two-Dimensional Rotation (Linear Molecules)	54
5.1.4 Three-Dimensional Rotation (Tetrahedral Molecules)	55
5.2 Nuclear-Spin Functions	61
5.3 Transition Matrix Elements for Neutron Scattering	65
6. Rotational Excitations at Low Temperatures II. Examples	70
6.1 Free Rotation	70
6.1.1 Solid Hydrogen	71
6.1.2 Methane (CH_4)	71
6.1.3 CH_4 in Rare-Gas Matrices	74
6.1.4 γ -Picoline	77
6.2 Rotational Tunneling	78
6.2.1 CH_3 Groups	79
a) Dimethylacetylene	79
b) MDBP	80
c) Other Examples	82
6.2.2 NH_3 (in Hexamine Nickel Halides)	83
6.2.3 Methane	84
a) CH_4 II	84
b) CH_4 Adsorbed on Grafoil	86
6.2.4 Ammonium Salts	88
a) $(\text{NH}_4)_2\text{SnCl}_6$	88
b) NH_4ClO_4	91
7. Rotational Excitations at Low Temperatures III. Special Features	93
7.1 Temperature Dependence	93
7.1.1 Random Averaging Model	94
7.1.2 Refined Random Averaging Model	97
7.1.3 Coupling to Collective Modes	98
7.2 Pressure Dependence of Tunneling Energies	100
7.3 Isotope Effect	103
7.4 Tunneling in Molecular Mixtures	106

Appendix: Calculation of Transition Matrix Elements	110
A1. Calculation of Spin Functions for XH_4 and XD_4	110
A2. Calculation of Transition Matrix Elements (Cubic Symmetry)	111
A3. Transitions at Sites with Reduced Symmetry	114
A4. Transition Matrix Elements for the Neutron Scattering from Methyl Groups	116
List of Symbols	118
References	122
Subject Index	127
