

# Contents

<b>1. Introduction</b>	1
1.1 Reciprocal Space and Normal Coordinates	2
1.2 Momentum and Energy Transfer of the Neutron	2
1.3 Time-of-Flight and Three-Axis-Spectrometer Techniques	4
<b>2. Experimental Technique with Three-Axis Spectrometers</b>	8
2.1 Reflectivity of Monochromators and Resolution	8
2.2 Higher Order Contaminations	10
2.3 Resolution and Focussing	10
<b>3. The Scattering Function and Symmetry Operations in the Crystal</b>	16
3.1 Polarization and Symmetry of Eigenvectors	18
3.2 Intensity of Phonons in Different Brillouin Zones	21
3.3 Extended Zone Scheme for Non-Symmorphic Space Groups	23
<b>4. Lattice Dynamical Models</b>	25
4.1 Ionic Crystals: AgBr and CuCl	26
4.2 Metals: Cadmium	31
4.3 Molecular Crystals: Naphthalene and Anthracene	39
<b>5. Analysis of Phonon Intensities</b>	46
5.1 Electron-Phonon Interaction in Cadmium	46
5.2 Anticrossing of Dispersion Branches and Exchange of Eigenvectors in Naphthalene	53
5.3 Eigenvector Determination	56
5.3.1 Eigenvectors and Lattice Dynamical Models	57
5.3.2 Exchange of the Transverse Mode Eigenvectors in AgBr at the L point	58
5.3.3 Eigenvector Exchange of Two Modes with Varying Temperature in Quartz	59
5.3.4 Eigenvector Determination of the Soft Mode in $Tb_2(MoO_4)_3$	68

<b>6. Analysis of Phonon Line Shapes</b> .....	73
6.1 Frequency Shift and Damping in AgBr .....	74
6.2 Structural Lattice Instabilities .....	77
6.2.1 Soft Mode in $\text{Tb}_2(\text{MoO}_4)_3$ .....	78
6.2.2 The Central-Peak Phenomenon .....	81
6.3 Frequency-Dependent Damping in CuCl at 5 K .....	83
<b>7. Final Remarks</b> .....	88
<b>References</b> .....	91
<b>Subject Index</b> .....	95
