1. Introduction and Survey .....	1
<hr/>	
Part A. General Theory	
<hr/>	
2. The Projection Operator Technique .....	9
2.1 Microscopic Dynamics .....	10
2.2 Macroscopic Variables and Relevant Probability Density .....	12
2.3 Projection Operator .....	14
2.4 Decomposition of the Time Evolution Operator .....	16
2.5 Generalized Transport Equations .....	18
2.6 Generalized Langevin Equations .....	21
2.7 More on Projection Operator Methods .....	23
3. Statistical Thermodynamics .....	27
3.1 Generalized Canonical Probability Density .....	29
3.2 Transport Equations .....	32
3.3 Langevin Equations .....	34
3.4 Mori Theory .....	36
3.5 Approximate Transport Equations .....	38
3.6 Approximate Langevin Equations .....	40
3.7 Time-Reversal Symmetry .....	42
4. The Fokker-Planck Equation Approach .....	46
4.1 Relevant Probability Density .....	48
4.2 Generalized Fokker-Planck Equation .....	50
4.3 Properties of Drift and Diffusion Kernels .....	54
4.4 Fokker-Planck Equation .....	56
4.5 Renormalization of Thermodynamic Forces .....	59
4.6 Renormalization of Transport Coefficients .....	62
4.7 More on the Fokker-Planck Equation Approach .....	65
5. The Master Equation Approach .....	69
5.1 Relevant Probability Density .....	70

5.2 Generalized Master Equation .....	73
5.3 Properties of the Stochastic Operators .....	77
5.4 Weak Coupling Limit .....	79
5.5 Properties of the Master Equation .....	84
5.6 Renormalized Transport Equations .....	87
<b>6. Response Theory</b>	
6.1 Microscopic Response Theory .....	92
6.2 Macroscopic Coupling of Applied Forces .....	96
6.3 Linear Response of Equilibrium Systems .....	99
6.4 Fokker-Planck Equation Approach .....	102
6.5 Master Equation Approach .....	106
<hr/>	
<b>Part B. Select Applications</b>	
<hr/>	
7. Damped Nonlinear Oscillator .....	109
7.1 Microscopic Model and Generalized Fokker-Planck Equation .....	110
7.2 Fokker-Planck Approximation .....	112
7.3 Brownian Motion and Impurity in a Harmonic Lattice .....	115
7.4 Renormalization of Transport Equations .....	118
7.5 Expansion in Terms of $k_B$ .....	122
8. Simple Fluids .....	125
8.1 Systems with Local Conservation Laws .....	126
8.2 Conservation Laws in Simple Fluids .....	128
8.3 Generalized Canonical Probability Density .....	130
8.4 Ideal Fluids .....	132
8.5 Viscous Fluids .....	135
8.6 Fluctuations in Nonequilibrium Fluids .....	142
9. Spin Relaxation .....	147
9.1 Macroscopic Variables and Relevant Probability Density .....	147
9.2 Master Equation .....	150
9.3 Bloch Equations .....	154
9.4 Dynamic Susceptibility .....	156
References .....	158
Subject Index .....	163
