Applications of Neutron Scattering in Chemistry

By R.E. Lechner and C. Riekel (With 49 Figures)

1. Introduction	1
2. Principle of the Scattering Experiment	2
3. Scattering Cross-Sections	5
4. Scattering Theory	10
4.1 Differential Cross-Sections and Scattering Functions	10
4.2 Van Hove Correlation Functions	13
4.3 Classical Approximation and Interpretation of the Correlation Functions	15
4.4 Diffraction and Elastic Scattering	19
5. Models for the Incoherent Scattering Function	23
5.1 Translational Diffusion	23
5.2 Rotational Diffusion	24
5.3 Vibrations of Crystal Lattices and of Molecules	26
5.4 Convolution of Different Scattering Functions	27
6. Specific Applications of Neutron Scattering	28
6.1 Localisation of Hydrogen Atoms in Crystals	28
6.2 Investigation of the Chemical Bond with Neutron Diffraction	29
6.2.1 Combined Neutron/X-Ray Diffraction (X-N Method)	29
6.2.2 Determination of the Spin Density with Polarised Neutrons ..	30
6.3 Small-Angle Scattering from Macromolecules	33
6.3.1 Polymers	33
6.3.2 Biological Macromolecules	35
6.4 Identification of Mobile Molecular Groups Using Isotope Substitution.....	37
6.5 Determination of Molecular Rotation Radii, Axes of Rotation and Rotation Rates	39
6.6 Rotational Tunneling in Molecular Crystals	43
6.7 Determination of Diffusion Parameters: Hydrogen in Metals	45
7. Application of Neutron Scattering to Structural and Kinetic Problems	47
7.1 Kinetics of Structural Transformations	47

7.1.1	Real-Time Small-Angle Scattering	48
7.1.2	Real-Time Neutron Diffraction	50
7.2	Dynamics of Chemical Equilibria	52
7.3	Fast Ion Transport: Superionic Conductors	55
7.4	External Surfaces	57
7.4.1	Structure of Physisorbed Adsorbates	57
7.4.2	Dynamics of Physisorbed Adsorbates	63
7.4.3	Chemisorbed Adsorbates	64
7.5	Internal Surfaces	65
7.5.1	Structure of Intercalation Compounds	65
7.5.2	Spectroscopic Studies	67
7.6	Cross-Over Phenomena in Polymer Solutions	70
7.6.1	Static Structure	71
7.6.2	Dynamic Structure	74
8.	Conclusion	77
Appendix A:	Scattering Function and Thermal Average	77
Appendix B:	Application of the Convolution Theorem	79

Transport Mechanisms of Light Interstitials in Metals

By D. Richter (With 69 Figures)

1.	Introduction	85
2.	Transport Theory of Light Interstitials in Metals	88
2.1	Basic Considerations	88
2.2	Phonon-Assisted Motion – Classical Small-Polaron Theory	92
2.3	Small-Polaron Hopping Beyond the Condon Approximation	95
2.4	The One-Phonon Process	99
2.5	Coherent Motion	100
2.5.1	Small-Polaron Bands	100
2.5.2	Bandlike Propagation	103
2.5.3	Transition Between Coherent and Incoherent Diffusion	105
2.6	Capture and Release from Trapping Centers	107
2.7	Small-Polaron Formation and the Possibility of a Delay to Self-Trapping	109
3.	Muon Diffusion Experiments in Metals	112
3.1	The Muon as a Light-Hydrogen Probe	112

3.2 Basic Muon Properties	113
3.2.1 Muon Production	113
3.2.2 Asymmetry and Decay	116
3.3 Experimental Setup	116
3.4 Static Linewidth – Muon Location and Electric Field Gradients	119
3.5 Motional Narrowing, Muon Diffusion	125
3.5.1 Theory of Depolarization	125
3.5.2 Muon Diffusion – A Short History	127
3.6 Muon Diffusion and Trapping – The Case of Al	136
3.6.1 Muon Depolarization for Diffusion in the Presence of Traps	137
3.6.2 Muon Diffusion in Aluminium	138
4. Hydrogen Diffusion and Trapping in Metals	149
4.1 Temperature and Isotope Dependence of the Hydrogen Diffusion Coefficient in Selected bcc and fcc Metals	150
4.2 Quasielastic Incoherent Neutron Scattering Studies of H Diffusion	156
4.2.1 Outline of the Method	156
4.2.2 Correlated Jumps and Hydrogen Diffusion in bcc Metals	159
4.2.3 Hydrogen Diffusion in the Presence of Trapping Impurities	164
4.2.4 Hydrogen Diffusion in Simple Concentrated Systems	175
4.2.5 Hydrogen Diffusion in Potential H Storage Materials	180
4.3 Phonons and Hydrogen Diffusion	185
4.3.1 Local Vibrations of Hydrogen	185
4.3.2 H Band Modes	190
4.4 Dynamics of Hydrogen Trapped at Impurity Atoms	194
4.4.1 Hydrogen Jump Processes Near a Trapping Impurity	195
4.4.2 Tunneling States of Trapped Hydrogen at Low Temperatures ..	201
4.4.3 Local Vibrations of Hydrogen Trapped at Impurities	205
5. Outlook and Conclusion	210
A1. Appendix	213
A2. Appendix	214
A3. Appendix	215
A4. Appendix	216
