Contents

1. Introduction 1

2. Theoretical Background 3
2.1 Dipole Force Tensor and Elastic Polarization 3
2.1.1 Structures of Interstitials 3
2.1.2 Dipole Tensors 4
2.1.3 Paraelastic Relaxation Strengths 8
2.1.4 Comparison with Diffuse Huang X-Ray Scattering .. 12
2.1.5 Diaelastic Polarization 14
2.2 Elastic Interaction Between Point Defects 18
2.2.1 Paraelastic Interaction (Size Interaction) 18
2.2.2 Diaelastic Interaction (Inhomogeneity Interaction) .. 19
2.3 Dynamics and Geometry of Interstitial Jumps 19
2.3.1 Jumps in a Sinusoidal Potential 19
2.3.2 Jump Modes of Self-Interstitials 20
2.4 Time Dependence of the Paraelastic Polarizabilities: Relaxation Modes 22
2.5 Quantum Effects 24
2.6 Computer Simulations of Single and Multiple Self-Interstitials 25
2.7 Computer Simulations of the Interaction of Self-Interstitials with Solute Atoms 28
2.7.1 Structure of SI Complexes 28
2.7.2 Binding Energies 30
2.7.3 Mobilities 31
2.7.4 Trapping Radii 35

3. Experimental Techniques 36
3.1 Creep and Elastic Aftereffect 36
3.2 Elastic Energy Dissipation 38
3.3 Experimental Devices 41
3.4 Use of Single Crystals 44

4. Experimental Results for Pure Metals 47
4.1 Diaelastic Polarizabilities 47
4.2 Diffusional Motion of Self-Interstitials 53

4.2.1 fcc Metals 53
a) Aluminum 53
b) Copper 65
c) Nickel 67
d) Other fcc Metals 67
4.2.2 bcc Metals 68
a) Iron 68
b) Molybdenum 68
c) Other bcc Metals 74
4.2.3 hcp Metals 74
4.2.4 Data Collection 74

5. Experimental Results for Dilute Alloys 76
5.1 Copper Alloys 76
5.2 Aluminum Alloys 82
5.3 Nickel Alloys 86
5.4 Au- and Pt-Based Alloys 88
5.5 Ag Alloys 88
5.6 FeNi 91

6. Radiation-Induced Segregation 94

7. Conclusions 97
