

Contents

1. Introduction	1
2. The Equation of State and the Structure of Cosmic Objects	3
2.1 Basic Structure Equations and Ideal Equations of State	4
2.2 Non-ideal Equations of State	7
2.3 Stellar Energy Sources	14
2.4 Energy Transport	16
3. Nuclear Equations of State	21
3.1 General Remarks	21
3.2 Green's Function and Many-Body Theory	29
3.2.1 Time-Dependent Perturbation Theory	29
3.2.2 Perturbation Theory and Feynman Diagrams	33
3.2.3 Single-Particle Green's Function	37
3.3 Nucleon-Nucleon Interaction	43
3.3.1 The One-Boson-Exchange Model	45
3.3.2 NN Scattering	48
3.3.3 Medium-Range Attraction	52
3.4 Hole-Line Expansion and Other Approaches	55
3.4.1 Brueckner-Hartree-Fock	55
3.4.2 Beyond BHF	61
3.5 Relativistic Effects	66
3.5.1 Walecka Model for Nuclear Matter	66
3.5.2 Dirac-Brueckner-Hartree-Fock	69
3.6 Subnucleonic Degrees of Freedom	74
3.6.1 Excitations of the Nucleons	74
3.6.2 Pion Condensation	78
3.6.3 Effective Quark Models	84
4. Neutron Stars: Spherically Symmetric and Rotating Models	93
4.1 Spherically Symmetric Neutron Stars	93
4.1.1 Relativistic Structure Equations	95

4.1.2	Solution Method and Results	98
4.1.3	Stability and Maximum Mass	99
4.2	Rapidly Rotating Neutron Stars	101
4.2.1	Basic Formulation	103
4.2.2	Numerical Solution Method	110
4.2.3	Results	113
5.	Asteroseismology	121
5.1	Oscillations of Spheres	121
5.2	Free Oscillations of the Earth	136
5.3	Helioseismology	142
5.4	Asteroseismology of White Dwarfs	154
5.5	Oscillations of Neutron Stars	162
	Reprint of Friedrich Hund's Review Article	175
	English Translation of Friedrich Hund's Review Article	217
	References	259
	Subject Index	271
