

Contents

<i>Kurt Kremer</i> Dynamics of Polymer Solutions and Melts	1
<i>Reinhard Lipowsky</i> The Physics of Flexible Membranes.....	19
<i>Aron Pinczuk</i> Inelastic Light Scattering by the Two-Dimensional Electron Gas ...	45
<i>Artur Zrenner</i> Optical Properties of Electric Field Tunable Quantum Well Structures.....	61
<i>Jochen Feldmann</i> Bloch Oscillations in a Semiconductor Superlattice.....	81
<i>Karl Leo</i> Dynamics of Wavepackets in GaAs/AlGaAs Heterostructures.....	97
<i>Waldemar Kütt</i> Coherent Phonons in III-V-Compounds.....	113
<i>Thomas Elsaesser, Andrea Lohner, and Michael Woerner</i> Relaxation Processes of Hot Holes in Germanium and GaAs Studied by Picosecond Infrared Spectroscopy.....	131
<i>Heinz Kalt</i> Carrier Relaxation in Semiconductors with Multiple Inequivalent Valleys.....	145
<i>Friedhelm Bechstedt</i> Quasiparticle Corrections for Energy Gaps in Semiconductors	161
<i>M. Stutzmann, J. Weber, M. S. Brandt, H. D. Fuchs, M. Rosenbauer, P. Deak, A. Höpner, and A. Breitschwerdt</i> Visible Luminescence from Silicon.....	179
<i>Ulf König</i> Electronic Si/SiGe Devices: Basics, Technology, Performance.....	199
<i>Hans Peter Wagner and Hermann Leiderer</i> Optical Characterization of ZnTe epilayers.....	221
<i>Otfried Goede and Wolfram Heimbrodt</i> Optical Properties of Semimagnetic Quantum Wells	237

Dmitri R. Yakovlev

Two Dimensional Magnetic Polarons in Semimagnetic Quantum Well Structures 251

C. M. Sotomayor Torres, A. P. Smart, M. A. Foad, and C. D. W. Wilkinson
Fabrication and Spectroscopy of dry etched Wide-gap II-VI Semiconductor Nanostructures 265

Fritz Henneberger, Joachim Puls, Axel Schülzgen, Volker Jungnickel, and Christine Spiegelberg
Optical Properties of II-VI Quantum Dots in Glass 279

Stephan Gärtner
Superconductivity in Doped Fullerenes 295

A. Muramatsu, G. Dopf, J. Wagner, P. Dieterich, and W. Hanke
Quantum Monte Carlo Simulations for High- T_c Superconductors.. 317

Martin Henzler, Michael Horn v. Hoegen, and Ulrich Köhler
Growth of Monoatomic Layers: Investigation with Electron Diffraction and Scanning Tunneling Microscopy..... 333
