

TABLE OF CONTENTS

Volume I

	Page No.
Foreword.....	v
Preface	vii
Contributing Authors	x
CHAPTER I: FREQUENCY AND WAVELENGTH.....	1
1.01 Techniques for the Measurement of Frequency and Wavelength	3
1.02 Detailed Procedures for the Measurement of Wavelength	31
1.03 Detailed Procedures for the Measurement of Frequency	36
1.04 Comparisons of Measurements	69
CHAPTER II: MEASUREMENT OF STANDING WAVE RATIO	73
2.01 Description of Standing-Waves	73
2.02 General Slotted-Section Techniques for Measuring VSWR	83
2.03 Slotted-Section System Errors.....	95
2.04 Precision Slotted-Section Techniques.....	98
2.05 Cable VSWR Slotted-Section Techniques	107
2.06 Non-Slotted-Section Methods of Measuring VSWR.....	115
2.07 Automatic Methods for Measuring VSWR.....	129
2.08 Summary of VSWR Methods and Ranges.....	130
CHAPTER III: MEASUREMENT OF POWER	135
3.01 Survey of Power Measurement Techniques at Microwave Frequencies.....	135
3.02 Techniques of Waveguide Power Measurement.....	140
3.03 Calorimetric Power-Measuring Techniques	171
3.04 Bolometric Power Measurements	185
3.05 Peak Power Measurements.....	212
3.06 Application of Special Techniques and Phenomena for Microwave Power Measurements.....	217
CHAPTER IV: REPRESENTATION AND MEASUREMENT OF RECIPROCAL DISCONTINUITY STRUCTURES IN SINGLE-MODE WAVEGUIDE	227
One-Port Networks	
4.01 Representation of One-Port (Terminating) Structures	229
4.02 Measurement of One-Port Structures	232
Two-Port Networks	
4.03 Alternative Representations	235
4.04 Three-Point Methods of Measurement	249
4.05 Semi-Precision Methods of Measurement	252
4.06 Precision Methods of Measurement and Associated Representations	273
4.07 Auxiliary Techniques for Low-Loss Structures.....	303

Chapter IV, continued

Multi-Port Networks

4.08 All Ports Accessible for Input Measurements	305
4.09 Only One Port Accessible for Input Measurements	307
Appendix: Determination of the Equivalent Circuit Parameters of a Four-Terminal Structure from Three Arbitrary Input-Output Measurements	309

CHAPTER V: MULTIMODE TECHNIQUES..... 311

Specific Multimode Waveguide Configurations

5.01 Circular Waveguide (H_{01} Mode)	315
5.02 Rectangular Waveguide	326

Multimode Networks

5.03 Alternative Matrix Representations	328
5.04 Relation Between Various Matrix Representations	333
5.05 Matrix Restrictions for Special Networks	335

CHAPTER VI: ATTENUATION AND PHASE CONSTANTS 339

6.01 General Remarks	339
6.02 Derivation of Attenuation and Phase Constants	339
6.03 Some Formulas Related to Attenuation and Phase Constants	342
6.04 Summary and Comparison of Measurement Methods	344

Attenuation Constant

6.05 Determination of Attenuation Constant from Attenuation Measurement	346
6.06 Determination of Attenuation Constant from the Measurement of Standing Wave Patterns	347
6.07 Attenuation Constant Measurement Involving Double Power Points	350
6.08 Measurement of Attenuation Constant with a Lossless or Lossy Variable Termination	353
6.09 Determination of Attenuation Constant from Q Measurement	359

Phase Constant

6.10 Measurement of Phase Constant with a Variable Termination	364
6.11 Measurement of Phase Constant with a Slotted Line	365
6.12 Precision Comparison of Two Different Guide Wavelengths	366
6.13 Frequency Variation Method of Phase Constant Measurement	368
6.14 Cavity Method of Phase Constant Measurement	373

CHAPTER VII: ATTENUATION 377

7.01 Definitions	377
7.02 Available Methods for the Measurement of Attenuation	378
7.03 Insertion or Power Ratio Methods	379
7.04 Substitution Methods	392
7.05 Special Methods and Techniques	413
