

TABLE OF CONTENTS

Chapter I

Fundamental Aspects of Interactions of Radiation with Matter	1
I.A. Interactions of Radiations with Matter	1
I.A.1. Introduction	1
I.A.2. Interactions of Photons with Atoms and Molecules.....	2
I.A.3. Interactions of Electrons with Atoms and Molecules	4
I.A.4. Interactions of Ions with Atoms and Molecules	11
I.A.5. Interactions of Neutrons with Atomic Nuclei.....	15
I.B. Elementary Processes	20
I.B.1. Degradation Spectra of Slowing Down Electrons.....	20
I.B.2. Spatial Distribution of Secondary Electrons: Spurs, Blobs and Tracks	22
I.B.3. W-Values.....	22
I.B.3.a. Definition	22
I.B.3.b. W-Values in Gaseous Substances for Electrons and α -Particles	22
I.B.3.c. W-Values in Gas Mixtures	22
I.B.3.d. Energy Dependence of W-Values in Gases.....	27
I.B.3.e. W-Values in Liquids	30
I.B.3.f. W-Values in Solids.....	30
I.B.3.g. Fano Factors	31
I.B.4. Stopping Power	31
I.B.4.a. General Concepts.....	31
I.B.4.b. Stopping Power for Light Ions	35
I.B.4.c. Stopping Power for Heavy Ions	37
I.B.4.d. Stopping Power for Electrons	38
I.B.5. Linear Energy Transfer (LET), Range, and Bragg Curves.....	39
I.B.5.a. LET	39
I.B.5.b. LET and Dose Distribution in LET of High Energy Electrons and Positrons.....	39
I.B.5.c. LET and Dose Distributions in LET of High Energy Photons.....	41
I.B.5.d. LET and Dose Distribution in Let of High Energy Ions and High Energy Neutrons	41
I.B.5.e. Ranges	49
I.B.5.f. Bragg Curves of High Energy Ions.....	49
References	53

Chapter II

Radiation Sources and Dosimetry	59
II.A. Radiation Sources	59
II.A.1. Radioisotopes.....	59
II.A.2. Electron Accelerators.....	59
II.A.3. Synchrotron Radiation Sources (SR)	62
II.A.4. Nuclear Reactors	62
II.A.4.a. (n,γ) Irradiation	62
II.A.4.b. f.f. Irradiation	63
II.A.4.c. Circulated Fluid Radiation Source	63
II.A.4.d. Recoil Particles from Specific Nuclides	63

II.B.	Radiation Dosimetry	63
II.B.1.	General Aspects of Radiation Dosimetry	63
II.B.1.a.	Concepts of Radiation Dosimetry.....	63
II.B.1.b.	Radioactivity	64
II.B.1.c.	Radiometry	68
II.B.1.d.	Interaction Coefficients	69
II.B.1.e.	Dosimetric Quantities	70
II.B.1.f.	Quantities to Describe the Effects of Radiation	71
II.B.1.g.	Quantities and Units for Use in Radiation Protection	72
II.B.2.	Methods of Radiation Dosimetry	72
II.B.2.a.	Theoretical Calculations by Absolute Methods	73
II.B.2.b.	Theoretical Calculations by Relative Methods	73
II.B.2.c.	Experimental Determination by Absolute Methods	74
II.B.2.d.	Experimental Determination by Relative Methods	74
II.B.3.	Practical Description of Radiation Dosimetry	74
II.B.3.a.	Dosimetric Methods for γ -Rays and Electron Beams	74
II.B.3.b.	Dosimetry of Mixed Field of Neutrons and γ -Rays	85
References.....		93

Chapter III		
Method of Studying Radiation Chemical Processes.....		97
III.A.	Experimental Methods of Radiation Chemistry.....	97
III.A.1.	Scavenger Method.....	97
III.A.1.a.	Radical Scavenger.....	98
III.A.1.b.	Electron Scavengers	98
III.A.1.c.	Positive-Ion Scavengers	99
III.A.2.	Pulse-Radiolysis Method	99
III.A.3.	Rigid-Matrix Method	100
III.A.4.	High-Pressure Mass Spectrometry	100
III.A.5.	Other Experimental Methods	101
III.B.	Direct Observation of Transient Species	101
III.B.1.	Pulse Radiation Sources	101
III.B.1.a.	Linear Accelerator (Linac)	101
III.B.1.b.	DC Accelerators	102
III.B.1.c.	Cyclotron.....	102
III.B.1.d.	Febetron	102
III.B.2.	Dosimetry of Pulsed Radiation	102
III.B.2.a.	Preparation of Chemical Dosimeter.....	103
III.B.2.a.i.	Fricke Dosimeter.....	103
III.B.2.a.ii.	Sulfuric Acid Dosimeter	104
III.B.2.a.iii.	Potassium Ferrocyanide Dosimeter	104

	III.B.2.a.iv.	Thiocyanate Dosimeter.....	104
	III.B.2.a.v.	Hydrated (Solvated) Electron ..	105
III.B.3.	Pulse Radiolysis-Optical Absorption and Emission Methods	105	
III.B.3.a.	General Description	105	
	III.B.3.a.i.	Types of Detection.....	105
	III.B.3.a.ii.	Types of Beams.....	106
III.B.3.b.	Light Sources.....	108	
III.B.3.c.	Sample Cell	112	
III.B.3.d.	Photodetectors.....	114	
III.B.3.e.	Other Systems.....	115	
	III.B.3.e.i.	Signal Processing System	115
III.B.4.	Picosecond Pulse Radiolysis.....	118	
III.B.4.a.	Picosecond Electron Beams from a Line	118	
III.B.4.b.	Picosecond Pulse Radiolysis.....	118	
	III.B.4.b.i.	Kinetic Spectrophotometry with Picosecond Time Resolution	119
	III.B.4.b.ii.	Stroboscopic Pulse Radiolysis	119
	III.B.4.b.iii.	Lists of Picosecond Pulse Radiolysis Systems	119
	III.B.4.b.iv.	Picosecond Synchrotron Pulse Radiolysis.....	119
III.B.5.	DC Conductivity Detection Techniques	119	
III.B.5.a.	Conductivity and Mobility.....	120	
III.B.5.b.	Purification Techniques.....	121	
III.B.5.c.	Production of Charged Species	121	
III.B.5.d.	Methods of Conductivity Measurement	122	
III.B.5.e.	Conductivity Cell and Measurement System.....	124	
III.B.5.f.	Mobilities of Some Transient Charged Species ..	125	
III.B.5.g.	Application of DC Conductivity Detection Techniques	131	
III.B.5.h.	Conclusions	131	
III.B.6.	Microwave Conductivity Techniques	131	
III.B.6.a.	Introduction	131	
III.B.6.b.	Basis of Microwave Technique.....	132	
	III.B.6.b.i.	Conductivity of an Iodized Gas at High Frequencies	132
	III.B.6.b.ii.	Principles of the Microwave Conductivity Technique.....	133
III.B.6.c.	Experimental	134	
III.B.6.d.	Application to Elementary Rate Processes.....	137	
	III.B.6.d.i.	Electron Attachment	137
	III.B.6.d.ii.	Electron-Ion Recombination	138
	III.B.6.d.iii.	Electron Thermalization in Gases	138
	III.B.6.d.iv.	Ionic Processes in Condensed Phases	138
	III.B.6.d.v.	Other Processes	138
III.B.6.e.	Comparison with Other Techniques	139	
III.B.7.	ESR	139	
III.B.7.a.	Detection of Radicals Trapped in Solids.....	139	
	III.B.7.a.i.	Basic Theory and Spectro- scopy of ESR	140

III.B.7.a.ii.	Low-Temperature Irradiation and ESR Measurement.....	142
III.B.7.a.iii.	Matrix Isolation ESR Method	144
III.B.7.b.	Spin-Trapping Method	144
III.B.7.b.i.	Solvents.....	146
III.B.7.b.ii.	Spin-Trap Reagents	146
III.B.7.b.iii.	Preparation of the Solutions....	146
III.B.7.b.iv.	Monomer-Dimer Equilibrium of Spin Traps	147
III.B.7.b.v.	ESR Cells.....	148
III.B.7.b.vi.	Radiolysis.....	148
III.B.7.b.vii.	ESR Measurements	148
III.B.7.b.viii.	Identification of Spin Adducts	148
III.B.7.b.ix.	Kinetic Aspects of Spin Traps ..	151
III.B.7.c.	ESR Measurement during Radiolysis	154
III.B.7.c.i.	ESR Measurement during Irradiation by a DC Electron Beam	155
III.B.7.c.ii.	Time-Resolved ESR Measure- ment during Pulse Radiolysis ..	156
III.B.7.c.iii.	Fluorescence-Detected ESR of Geminate Ion-Radical Pairs ..	157
III.B.8.	Optical Detection of Intermediates in Rigid Matrices.....	159
III.B.8.a.	Introduction	159
III.B.8.b.	Organic Matrices	159
III.B.8.c.	Inorganic Matrices.....	160
III.B.8.d.	Crystals	161
III.B.8.e.	Purification Procedures	162
III.B.8.f.	Optical Cells	163
III.B.8.g.	Cryostat for Liquid Nitrogen Temperature.....	163
III.B.8.h.	Cryostat for Liquid Helium Temperature	163
III.B.8.i.	Variable-Temperature Cryostat	166
III.B.8.j.	Spectrophotometer.....	167
III.B.9.	Detection System in Synchrotron Radiation	168
III.B.9.a.	Monochromator	168
III.B.9.b.	Photon Intensity Monitor	170
III.B.9.c.	Filters and Window Materials	170
III.B.9.d.	Typical Experimental Arrangements.....	172
III.B.9.d.i.	Absorption	172
III.B.9.d.ii.	Fluorescence and Ionization.....	174
III.B.9.d.iii.	Time-Resolved Measurements ..	174
References.....		175

Chapter IV	
Fundamental Molecular Parameters in the Gas Phase	187
IV.A. Introduction	187
IV.B. Fundamental Processes in the Gas-Phase Radiation Chemistry	187
IV.C. Static Parameters	190
IV.C.1. Ionization Potentials and Appearance Potentials	190

IV.C.2.	Electron Affinities	190	
	IV.C.2.a. Reliability of the Values of EAs	202	
IV.C.3.	Electronic Energy Levels of Atoms	203	
IV.C.4.	Potential Energy Curves of Diatomic Molecules.....	203	
IV.C.5.	Basicities, Proton Affinities, Acidities and Hydride Ion Affinities of Molecules, and Thermochemical Data for Cluster Ions	204	
	IV.C.5.a. Gas-Phase Basicities and Proton Affinities of Molecules and Stabilities of Positive Ions	204	
	IV.C.5.b. Gas-Phase Acidities	205	
	IV.C.5.c. Cluster Ions	206	
IV.C.6.	Spectroscopic Constants and Heats of Formation for Free Radicals	210	
IV.D.	Dynamic Parameters	213	
IV.D.1.	Ion Fragmentation	213	
	IV.D.1.a. Statistical Models of Ion Fragmentation	213	
	IV.D.1.b. Breakdown Graphs	216	
IV.D.2.	Ion-Molecule Reactions	217	
	IV.D.2.a. Explanation of Tables IV.18 and IV.19	218	
IV.D.3.	Penning Ionization and Related Processes	223	
IV.D.4.	Reactions of Rydberg Atoms	225	
IV.D.5.	Electron Attachment.....	239	
	IV.D.5.a. Experimental Techniques and Obtained Data ...	239	
	IV.D.5.b. Two-Body Attachment Rate Constants	240	
	IV.D.5.c. Three-Body Attachment Rate Constants	240	
	IV.D.5.d. Other Aspects of Attachment Reaction Mechanism	240	
IV.D.6.	Electron-Ion and Ion-Ion Recombination Rate Constants	244	
IV.D.7.	Ion Mobilities and Electron Drift Velocities.....	244	
	IV.D.7.a. Ion Mobilities	244	
	IV.D.7.b. Electron Drift Velocities.....	245	
IV.D.8.	Dissociation of Excited Molecules.....	245	
IV.D.9.	Rate Constants for Organic Radicals	262	
References.....		276	
 Chapter V			
Early Events in Condensed Phase Radiation Chemistry.....		293	
V.A.	Picosecond Pulse Radiolysis of Liquids	293	
V.B.	Pulse Radiolysis Studies of the Formation of Solute Excited States	300	
	V.B.1. Energy Transfer	300	
	V.B.2. Recombination of Solute Ions	301	
	V.B.3. Direct Excitation by Čerenkov Light	301	
	V.B.4. Excitation by Subexcitation Electron	301	
	V.B.5. Relative Contributions of the Processes in Organic Liquids ..	302	
V.C.	Liquid Phase (Steady-State Experiments)	303	
	V.C.1. Spur Reactions in Polar Systems	303	
		V.C.1.a. Molecular Yields	304
		V.C.1.b. Radical Yields.....	304
		V.C.1.c. Models of Spur Reactions	305
		V.C.1.d. Spur Reactions in Other Polar Solvents	305

V.C.2.	Spatial Distribution in Nonpolar Liquids	305
V.C.2.a.	Scavenger Experiments	306
V.C.2.b.	Electric Field Effects on Free Ion Yields	306
V.C.2.c.	Theories Compared with Experiments	312
V.D.	Solid Phase	313
	References.....	315
 Chapter VI		
	Radiation Chemistry of Aqueous Systems.....	321
VI.A.	Radiolysis of Liquid Water.....	321
VI.A.1.	Primary Events	321
VI.A.1.a.	Molecular Products	321
VI.A.1.b.	Radical Products	322
VI.A.2.	Primary Yields of Molecular and Radical Products.....	322
VI.A.2.a.	Primary Yields in Neutral Aqueous Solution	322
VI.A.2.b.	Primary Yields in Acid Solution	324
VI.A.3.	Effects of Various Parameters	325
VI.A.3.a.	Linear Energy Transfer	325
VI.A.3.b.	pH.....	326
VI.A.3.c.	Solute Concentration	326
VI.A.3.d.	Temperature and Pressure	329
VI.A.3.e.	Deuterated Water (D_2).....	330
VI.A.4.	Formation Mechanisms for the Water Radiolysis Products	330
VI.A.4.a.	e_{aq}^-	330
VI.A.4.b.	H Atoms	331
VI.A.4.c.	H_2	331
VI.A.4.d.	OH , $H_3O_{aq}^+$	332
VI.A.4.e.	H_2O_2	332
VI.B.	Hydrated Electrons	332
VI.B.1.	Method of Formation.....	332
VI.B.1.a.	Radiolysis	332
VI.B.1.b.	Photolysis	333
VI.B.1.c.	Photoemission in Heterogeneous Systems	334
VI.B.1.d.	Chemical Conversion from Atomic Hydrogen.....	334
VI.B.1.e.	Other Methods	334
VI.B.2.	Physical Properties	334
VI.B.2.a.	Charge and Mobility	334
VI.B.2.b.	Molar Volume and Radius	335
VI.B.2.c.	Thermodynamic Properties	335
VI.B.2.d.	Optical and ESR Spectra	335
VI.B.2.e.	Theoretical Models	336
VI.B.3.	Rate Constants for Hydrated Electron Reactions.....	337
VI.C.	H Atoms	338
VI.D.	OH Radicals	338
VI.E.	Oxygen-Containing Radicals	338
VI.E.1.	O Atoms	338
VI.E.2.	Perhydroxyl Radicals	338
VI.E.3.	Protonated Perhydroxyl Radicals	368
VI.E.4.	Hydrogen Sesquioxide Molecule	368
VI.E.5.	Superoxide Ion	369
VI.E.6.	Ozonide Ion	370

VI.F. Radiolytic Products Yields in Aqueous Solutions	371
References.....	382

Chapter VII

Electrons in Condensed Media	395
VII.A. Conducting State Energy	395
VII.A.1. Definition	395
VII.A.2. Methods of Measurement.....	395
VII.B. Electron Mobility	398
VII.B.1. Definition	398
VII.B.2. Methods of Measurement.....	399
VII.C. Yields of Free-Ions.....	407
VII.C.1. Definition	407
VII.C.2. Methods of Measurement.....	407
VII.D. Rate Constants for Electron Reactions in Nonpolar Liquids.....	411
VII.D.1. Reactions of Excess Electrons	411
VII.D.2. Methods of Rate Determination	415
VII.E. Rate Constants for Electron Reactions in Polar Liquids	416
VII.F. Optical Properties of the Solvated Electrons	417
VII.G. ESR Spectra of Trapped Electrons	419
References.....	432

Chapter VIII

Radical Ions in Condensed Media	439
VIII.A. Optical Absorption Spectra of Radical Ions	439
VIII.A.1. Observation of Absorption Spectra of Radical Ions.....	439
VIII.A.2. Monomeric Radical Ions	439
VIII.A.3. Dimer Ions	440
VIII.B. ESR of Radical Ions	440
VIII.B.1. Radical Cations.....	451
VIII.B.2. Radical Anions	452
VIII.B.3. Reactions of Radical Ions	452
References.....	464

Chapter IX

Excited States in Condensed Media	469
IX.A. Photophysical Parameters of the Excited States	469
IX.A.1. Fundamental Parameters of the Excited States.....	469
IX.B. G-values of Excited States	472
IX.B.1. Methods of Measurement.....	472
IX.B.1.a. Introduction	472
IX.B.1.b. Measurement Methods of Excited States	472
IX.B.1.b.i. Methods for Measurement of the Yields of Solute Excited States.....	473
IX.B.1.b.ii. Method for Measurement of the Yields of Solvent Excited States.....	474
IX.B.2. Tables of Photophysical Parameters of the Excited States	475
IX.B.3. Tables of G-Values of the Excited States.....	491
References.....	495

Chapter X	
Hydrogen Atoms	497
X.A. Physical Properties of Hydrogen Atoms.....	497
X.B. Radiolytic Yield and Process of Formation of Hydrogen Atoms in the Gas and Liquid Phases	497
X.B.1. Yields of Thermal and Hot Hydrogen Atoms in the Radiolysis of Liquid Alkanes.....	497
X.B.2. Mechanism of Formation of Hydrogen Atoms in Alkanes.....	497
X.B.3. Radiolysis of Olefins	499
X.B.4. Translational Spectroscopy of Excited Hydrogen Atoms	499
X.C. Reaction of Hydrogen Atoms in the Gas Phase	500
X.C.1. Basic Aspects of Hydrogen Atom Reactions	500
X.C.1.a. Microscopic Aspects of Reaction.....	500
X.C.1.b. Isotope Effect and Energy Dependence.....	500
X.C.2. Rate Constant of Reaction of Hydrogen Atoms in the Gas Phase	502
X.D. Reactions of Hydrogen Atoms in Organic Liquids	503
X.E. Hydrogen Atoms in the Solid Phase	507
X.E.1. Radiolytic Yield of Hydrogen Atoms in the Solid Phase	507
X.E.2. Trapping Site of Hydrogen Atoms.....	507
X.E.3. Diffusion of hydrogen Atoms	520
X.E.3.a. Thermally Activated Diffusion	520
X.E.3.b. Tunneling Diffusion	520
X.E.4. Reaction of Hydrogen Atoms in the Solid Phase	522
X.E.4.a. Abstraction Reaction	522
X.E.4.b. Addition Reaction	524
X.E.4.c. Energy Dependence of Hydrogen Atom Reaction in the Solid Phase	524
X.F. Recoil Tritium Atom Reactions in the Gas Phase	525
X.F.1. Fundamental Reaction Modes in the Gas Phase	525
X.F.2. Relative Yields of Products in Recoil Tritium Reactions	526
X.F.3. Effects of Bond Dissociation Energies on Yields of Recoil Tritium Reactions	526
X.F.4. Secondary Decomposition of Excited Products from Recoil Substitution Reactions	530
X.F.5. Isotope Effects in Recoil Tritium Reactions	530
References.....	532
Chapter XI	
Free Radicals in Condensed Media.....	541
XI.A. Ionization Potentials of Free Radicals	541
XI.B. ESR Spectra of Free Radicals Generated by Ionizing Radiations	544
XI.C. Spin Trapping of Free Radicals	545
XI.D. Electronic Spectra of Free Radicals	558
References.....	564
Chapter XII	
Radiolysis Products	571
XII.A. Introduction	571

XII.B.	G-Values of Radiolysis Products	571
XII.B.1.	Hydrocarbons.....	571
XII.B.2.	Other Organic Compounds	571
XII.B.3.	Biological Compounds	576
XII.B.4.	Inorganic Compounds	576
XII.C.	LET Effects on Radiolysis Products.....	576
XII.C.1.	LET Effects in Radiolysis of Water and Aqueous Solutions.....	577
XII.C.2.	LET Effects in Radiolysis of Liquid Organic Compounds.....	581
XII.D.	Absorbed System.....	584
XII.D.1.	Methane	586
XII.D.2.	Methanol	586
XII.D.3.	Ethanol	586
XII.D.4.	<i>n</i> -Pentane.....	586
XII.D.5.	Cyclohexane-d ₁₂	587
XII.D.6.	Azoethane	587
XII.D.7.	Isopropylbenzene	587
XII.D.8.	Water.....	587
XII.D.9.	Carbon Dioxide	587
XII.D.10.	Nitrous Oxide	587
XII.D.11.	Ammonia.....	587

Radiation Effects on Engineering Materials	769
XV.A. Radiation Resistance of Standard Polymer Materials	769
XV.B. Polymers and Other Materials.....	769
XV.B.1. Radiation Damages to Fusion Reactor Components Including Composite Materials.....	769
XV.B.1.a. Epoxy Resins.....	776
XV.B.1.b. Polyimide Resins	778
XV.B.1.c. Other Polymer Materials	779
XV.B.2. Radiation Damage to Medical Supply Materials.....	780
XV.B.2.a. Introduction	780
XV.B.2.b. Radiation Damage of Polymer.....	781
XV.C. Radiation Chemistry of Nuclear Reactor Coolants	785
XV.C.1. Water-Cooled Reactors	785
XV.C.2. Gas-Cooled Reactors	786
XV.C.2.a. G-Values	789
XV.C.2.b. Rate Constants of Relevant Reactions	789
References.....	795

Chapter XVI

Radiation Processing	799
XVI.A. Polymers	799
XVI.A.1. Wire and Cable.....	800
XVI.A.1.a. Heat-Resistant Electronic and Appliance Wires with a Thin-Wall Insulation	800
XVI.A.1.b. Power Cables with Thick-Wall Insulation	803
XVI.A.1.c. Special Products.....	806
XVI.A.2. Heat-Shrinkable Tubing and Film	806
XVI.A.2.a. Heat-Shrinkable Tubing	806
XVI.A.2.b. Heat-Shrinkable Film.....	806
XVI.A.3. Plastic Foam	808
XVI.A.4. Source Technology and Practical Considerations of Polymer Processing	811
XVI.A.4.a. Designing Electron Beam Processing of Polymer	811
XVI.A.4.a.i. Wire and Cable	811
XVI.A.4.a.ii. Film and Sheet.....	811
XVI.A.4.a.iii. Tubing and Pipes	812
XVI.A.4.b. Cost Considerations of Polymer Processing	812
XVI.B. Sterilization	813
XVI.B.1. Sterilization Facilities and Plants	813
XVI.B.2. Sterilization Dose	814
XVI.B.3. Method for Estimation of Sterilization Dose.....	814
XVI.B.3.a. Method 1	814
XVI.B.3.b. Method 2	815

XVI.B.4.	Radiation Resistance of Organisms	815
XVI.B.4.a.	Kind of Organism	815
XVI.B.4.b.	Physiological State	815
XVI.B.4.c.	Environmental Conditions	815
	XVI.B.4.c.i. Effect of Oxygen	815
	XVI.B.4.c.ii. Additives	815
	XVI.B.4.c.iii. Temperature	815
	XVI.B.4.c.iv. Others.....	820
XVI.C.	Food Irradiation	820
XVI.C.1.	Advantage and Effect of Radiation on Foods.....	820
XVI.C.1.a.	Sprout Inhibition of Vegetables	821
XVI.C.1.b.	Insect and Parasite Disinfestation.....	822
XVI.C.1.c.	Control of Ripening	822
XVI.C.1.d.	Control of Microbial Spoilage.....	822
	XVI.C.1.d.i. Classification of Radiation Treatment	822
	XVI.C.1.d.ii. Radurization and Radicidation ..	823
	XVI.C.1.d.iii. Radappertization	824
XVI.C.2.	Radiation Chemistry of Food.....	825
XVI.C.2.a.	General.....	825
XVI.C.2.b.	Effect of Irradiation to Protein	826
XVI.C.2.c.	Effect of Irradiation to Carbohydrates	826
XVI.C.2.d.	Effect of Irradiation to Fat	828
XVI.C.2.e.	Destruction of Vitamins	828
XVI.C.3.	Wholesomeness of Irradiated Food	829
XVI.C.4.	Status of Clearance and Commercialization of Irradiated Foods	829
References.....		830

Chapter XVII

	Hot Atom Chemistry, Positron, and Muon Chemistry	833
XVII.A.	Hot Atom Chemistry	833
XVII.A.1.	Overview of Hot Atom Chemistry.....	833
XVII.A.2.	Decay-Induced Ionic Chemistry	836
XVII.A.2.a.	Experimental Aspects of Free Unsolvated Cations.....	836
XVII.A.2.b.	Theoretical Studies on Free, Unsolvated Cations	837
XVII.A.2.c.	Reactivity of the Decay-Induced Ions	839
XVII.A.2.d.	Impact to Structural and Reactivity Problems	839
XVII.A.3.	Decay-Induced Chemical Change in Condensed Phase—Especially in Biologically Important Substances	843
XVII.A.3.a.	Decay Effects in Biological Substances	843
XVII.B.	Positron Chemistry	847
XVII.B.1.	Overview of Positron Chemistry	847
XVII.B.1.a.	Positron and Positronium States in Matter	850
XVII.B.1.a.i.	Metals	850
XVII.B.1.a.ii.	Ionic Crystals	851
XVII.B.1.a.iii.	Gases	851
XVII.B.1.a.iv.	Molecular Liquids	853
XVII.B.1.a.v.	Molecular Solids	857

XVII.B.2.	Mechanism of Positronium Formation	857
XVII.B.3.	Reactions of Positronium	859
XVII.B.4.	Positron Beams	859
XVII.B.5.	Positron-Molecule Scattering	861
XVII.C.	Muon Chemistry	861
XVII.C.1.	Chemistry of Positive Muon and Muonium.....	861
XVII.C.2.	Chemistry of Negative Muons.....	875
References.....		877
 Chapter XVIII		
Theoretical Background		885
XVIII.A.	Absorption of Light	885
XVIII.A.1.	The Lambert-Beer Law.....	885
XVIII.A.2.	Oscillator Strength.....	885
XVIII.B.	Reaction Kinetics	886
XVIII.B.1.	General	886
XVIII.B.1.a.	Order of Reaction	886
XVIII.B.1.a.i.	First-Order Reaction	886
XVIII.B.1.a.ii.	Second-Order Reaction	887
XVIII.B.1.b.	Steady-State Approximation	888
XVIII.B.1.c.	The Arrhenius Equation	889
XVIII.B.1.d.	The Stern-Volmer Plot	889
XVIII.B.1.e.	Salt Effect on Ionic Reactions.....	890
XVIII.B.2.	Geminate Recombination Due to Diffusion-Controlled Reactions	891
XVIII.B.2.a.	The Smoluchowski Equation	892
XVIII.B.2.b.	Pair Survival Probability	892
XVIII.B.2.c.	Escape Probability and the Onsager Equation	894
XVIII.B.2.d.	Escape Probability under an External Electric Field.....	896
XVIII.B.2.e.	Scavenging Probability and the Warman-Asmus-Schuler Equation	897
XVIII.B.2.e.i.	Theory	897
XVIII.B.2.e.ii.	The Warman-Asmus-Schuler Equation	898
XVIII.B.2.f.	Relation between Pair Survival Probability and Scavenging Probability	898
XVIII.B.2.g.	The Square-Root Law	899
XVIII.B.3.	Bulk Reaction Due to Diffusion-Controlled Reactions	902
XVIII.B.3.a.	General	902
XVIII.B.3.b.	Relation between Bulk Reaction and Geminate Recombination	904
XVIII.B.3.c.	Reactions between Two Neutral Species	905
XVIII.B.3.d.	Ion Reaction.....	905
XVIII.B.4.	Energy Transfer	906
XVIII.B.4.a.	General	906
XVIII.B.4.b.	Singlet Energy Transfer and the Förster Theory.....	907
XVIII.B.4.c.	Singlet Energy Transfer under High-Density Excitation	908
XVIII.B.4.d.	Triplet Energy Transfer and the Dexter Theory	909

XVIII.C. Transport Theory.....	910
XVIII.C.1. Basic Relations	910
XVIII.C.4.a. Einstein Relation	910
XVIII.C.4.b. The Kubo Formula	910
XVIII.C.4.c. Effective Mass	911
XVIII.C.2. Electron Transport in Homogeneous Systems	911
XVIII.C.1.a. The Hopping Mechanism.....	912
XVIII.C.1.b. Quasi-free-electron Mechanism.....	913
XVIII.C.3. Electron Transport in Inhomogeneous Systems	916
XVIII.C.3.a. Trapping Mechanism	916
XVIII.C.3.b. Effective Medium Theory	916
XVIII.C.3.c. Percolation Threshold	917
XVIII.C.3.d. Stochastic Transport (Scher-Lax) Model.....	917
XVIII.C.3.e. Stokes' Law	918
References.....	918
Index	921
