Physics of solid surfaces

Subvolume b: Electronic and vibrational properties

1	General introduction (G. CHIAROTTI)	1
1.1	Motivations for a Landolt-Börnstein volume on surface physics	1
1.2	Outline of the volume	2
1.3	How to consult the volume	12
1.4	List of frequently used symbols and abbreviations	13
1.5	Conversion tables	20
1.6	Crystal structures and bulk lattice parameters of materials quoted in the volume	21
1.7	References for 1	27
2	The structure of surfaces	see subvolume III/24a
3	Electronic structure of surfaces	29
3.1	Electronic structure of surfaces: metals (K. JAKOBI)	29
3.1.1	Introduction	29
3.1.1.1	General remarks	29
3.1.1.2	The jellium model	29
3.1.1.3	Surface states	32
3.1.1.4	Image states	32
3.1.1.5	Surface Fermi-surfaces	34
3.1.1.6	Surface plasmon	36
3.1.1.7	Experimental methods	36
3.1.2	Data	37
3.1.2.1	Arrangement of the data	37
3.1.2.2	Data on the jellium model	38
3.1.2.3	Surface states and image states	43
3.1.2.3.1	Theoretical studies on image states	43
3.1.2.3.2	Comparative studies of image states and surface states	46
3.1.2.4	Work function data	56
3.1.2.5	Surface core-level shift data	69
3.1.2.5.1	SCLS - Theory	71
3.1.2.5.2	SCLS - Experimental results	75
3.1.2.6	Group IA (alkali metals): Li, Na, K, Rb, Cs	85
3.1.2.7	Group IIA (alkaline earth metals): Be, Mg, Ca, Sr, Ba	99
3.1.2.8	Group IB (noble metals): Cu, Ag, Au	111
3.1.2.9	Group IIB: Zn, Cd	183
3.1.2.10	Group IIIA: Al, In	185
3.1.2.11	Group IVA: Pb, and Group VA: Bi	207
3.1.2.12	3d transition metals: Sc, Ti, Cr, Fe, Co, Ni	210
3.1.2.13	4d transition metals: Y, Nb, Mo, Ru, Rh, Pd	259
3.1.2.14	5d transition metals: La, Hf, Ta, W, Ir, Pt	293
3.1.2.15	Lanthanides (4f) (rare-earth metals): Ce, Sm, Gd, Tb, Dy, Ho, Yb	328
3.1.2.16	Actinides (5f): Th, Pu, Am	333
3.1.3	References for 3.1	338

3.2	Electronic structure of surfaces: semiconductors (C. CALANDRA, F. MANGHI)	352
3.2.1	Introduction	352
3.2.1.1	Preliminary remarks	352
3.2.1.2	Experimental methods	352
3.2.1.3	Theory	355
3.2.2	Data	362
3.2.2.1	Arrangement of data	362
3.2.2.2	Surfaces of covalent semiconductors: C, Si, Ge	362
3.2.2.3	(110) surfaces of partially ionic compounds: GaAs, GaP, GaSb, InAs, InP, InSb, CdTe, ZnSe	389
3.2.2.4	GaAs polar surfaces	416
3.2.3	References for 3.2	425
4	Vibrational and excitational properties of surfaces	433
4.1	Suface phonons (R.F. WALLIS, S.Y. TONG)	433
4.1.1	Introduction	433
4.1.1.1	Background and general layout	433
4.1.1.2	Surface acoustic waves	433
4.1.1.2.1	Isotropic media	433
4.1.1.2.2	Anisotropic media	434
4.1.1.3	Microscopic approach to surface phonons	435
4.1.1.3.1	Lattice vectors, reciprocal lattice vectors	435
4.1.1.3.2	Dynamical matrix and normal modes of vibration	436
4.1.1.3.3	Characterization of surface modes of vibration	438
4.1.1.3.4	General remarques about surface force constants and surface modes of vibration	438
4.1.1.3.5	Surface phonons in specific categories of materials	439
4.1.1.3.5.1	Insulators (ionic bonding)	439
4.1.1.3.5.2	Semiconductors (covalent bonding)	439
4.1.1.3.5.3	Metals	440
4.1.1.4	Experimental methods	440
4.1.1.4.1	Inelastic helium atom scattering	440
4.1.1.4.2	Inelastic electron scattering	441
4.1.1.5	Correspondence of units	441
4.1.1.6	Theoretical models	441
4.1.2	Data: Ag, Al, Au, C, Cu, GaAs, GaSe, HfC, Kbr, Kcl, LiF, MgO, Mo, NaCl, NaF, NbC, Ni, NiAl, Pd, Pt, RbBr, RbCl, Si, TaC, TaSe ₂ , TiC, W, ZrC	442
4.1.3	References for 4.1	471
4.2	Surface polaritons (A.A. MARADUDIN)	474
4.2.1	Introduction	474
4.2.1.1	Preliminary remarks	474
4.2.1.2	Surface polaritons in two-layer systems	474
4.2.1.2.1	Two isotropic media	474
4.2.1.2.2	An anisotropic medium in contact with an isotropic medium	478
4.2.1.2.3	Surface polaritons on magnetic media	481
4.2.1.3	Experimental determinations of surface polariton dispersion curves	484
4.2.2	Data	487
4.2.2.1	Two isotropic media	487
4.2.2.2	A uniaxial crystal in contact with an isotropic medium	492
4.2.2.3	A biaxial crystal in contact with an isotropic medium	499
4.2.2.4	Surface polaritons in a magnetic field	500
4.2.2.5	An organic crystal in contact with an isotropic medium	501
4.2.3	References for 4.2	502

5 Magnetic properties of single crystal surfaces (U. GRADMANN)	506
5.1 Introduction	506
5.1.1 General remarks	506
5.1.2 Methods and definitions	506
5.2 Data	507
5.2.1 Surface magnetization at fixed temperatures	507
5.2.2 Magnetic hyperfine fields near surfaces at fixed temperatures	508
5.2.3 Temperature dependence of magnetic order near surfaces	509
5.2.3.1 Surface magnetization at low temperatures	509
5.2.3.2 Critical behavior of surface magnetization; live layers	511
5.2.4 Magnetic surface anisotropies	516
5.3 References for 5	517
6 Interaction of charged particles with surfaces	see subvolume III/24c
7 Interaction of atoms with surfaces	see subvolume III/24c
8 Interaction of electromagnetic radiation with surfaces	see subvolume III/24d
9 Electron tunneling at surfaces	see subvolume III/24d
10 General index	see subvolume III/24d
