

CONTENTS

CHAPTER 1. Ion Sources, Plasma Emitters, and the Primary Formation of Ion Beams	1
1.1. Plasma ion sources and their major parameters	1
1.2. Plasma emitters of positive ions	6
1.3. Formation of ion beams. Plasma focusing	10
CHAPTER 2. Focusing and Transport of Ion Beams	15
2.1. Propagation of nonrelativistic single-component charged-particle beams	15
2.2. Gas compensation of stable positive or negative ion beams	18
2.3. Spreading of compensated positive ion beams and its effect on focusing	22
2.4. The effect of the self-magnetic field of a compensated ion beam on beam transport	24
2.5. Synthesized beams	25
2.6. Collective processes in ion-beam plasmas and their effect on transport of compensated beams	27
2.7. Compensation of fluctuating ion beams and ion clusters (dynamic decompensation of ion beams)	32
2.8. Plasma-optical lenses and transport of compensated ion beams	34
CHAPTER 3. High-Current Ion Sources and Fast Atom Injectors for Thermonuclear Experiments	39
3.1. General information	39
3.2. Positive-ion-based injectors	43
3.3. Positive ion sources	45
3.4. Ion-optical system and neutralizer	58

CHAPTER 4. Mechanisms and Theory of Ion Sputtering of Metals.....	65
4.1. Ion sputtering and ion implantation in metals and the problem of improving the properties of metal surfaces	65
4.2. Rate of ion (cathode) sputtering	67
4.3. Dependence of the sputtering yield on the ion energy	69
4.4. The theory of sputtering by ion bombardment in the linear range of atomic collision cascades	71
4.5. Peak sputtering yields in the linear range of atomic collision cascades	76
4.6. Nonlinear effects in ion sputtering	85
4.7. Dependence of the sputtering yield on the angle of incidence of an ion at the target surface	89
4.8. Dependence of the sputtering yield on the ion dose and the residual oxygen and gas pressures	94
4.9. Dependence of sputtering yield on the cleavage plane of monocrystals and on the texture, roughness, and porosity of target surfaces	96
4.10. Sputtering yield dependence on target surface temperature	98
4.11. The parameters of the sputtering process and their effect on the sputtering yield	102
CHAPTER 5. Ion Cleaning and Milling of Solid Surfaces	103
5.1. Advantages and features of ion-plasma technology	103
5.2. Ion decontamination of surfaces	107
5.3. Ion milling (etching)	115
CHAPTER 6. Ion Finishing and Exposure of Structure in Solid Surfaces	133
6.1. Ion grinding and polishing of metal and glass surfaces ...	133
6.2. Exposure of the surface structure of solids by ion bombardment	137
6.3. Topography and morphology of surfaces created by ion bombardment	138
CHAPTER 7. Deposition of Films by Ion Sputtering	141
7.1. Thin film coatings and methods of producing them	141
7.2. Production of diamond and diamondlike films	143
7.3. Production of films of metals, alloys, oxides, borides, carbides, nitrides, silicides, sulfides, selenides, and tellurides by cathode sputtering	148
7.4. Ion sources for thin film sputter deposition	154
7.5. Comparison of films obtained by sputtering and other deposition techniques	160
7.6. Some applications of ion beams in thin film production	162
CHAPTER 8. Ion Film Deposition and Plating of Surfaces	165
8.1. Optimum energy for ion deposition in films	165

8.2. Vapor condensation combined with ion bombardment (ion plating) of surfaces	165
8.3. Alternating ion-vapor film deposition	166
8.4. Vacuum-plasma film deposition (a method for condensation by ion bombardment)	179
8.5. Production of textured tungsten layers in glow discharges	183
8.6. Film deposition by ionized clusters	184
8.7. A source of sputtered atoms for laser isotope separation (of uranium and other elements)	185
CHAPTER 9. Ion-Beam Welding, Microanalysis, and Micromachining of Solids with Ion Probes	187
9.1. Ion-beam welding	187
9.2. Ion probes for microanalysis and micromachining of solids	192
9.3. Prospects for the use of submicron-sized ion beams	207
