

Contents

Preface	xi
1 Introduction	1
1.1 Properties of Plasmas	1
1.1.1 Unmagnetized Plasmas	1
1.1.2 Magnetized Plasmas	2
1.1.3 Thermal Plasmas	2
1.2 Plasma Wave Applications	3
1.2.1 Plasma Waves in Ionospheric Physics	3
1.2.2 Plasma Waves in Astrophysics	4
1.2.3 Plasma Waves in Magnetized Fusion Plasmas	4
1.2.4 Plasma Waves in Laser-Produced Plasmas	5
1.3 Review of Electromagnetic Wave Propagation	5
1.3.1 The Maxwell Equations	5
1.3.2 Properties of the Helmholtz Equation	7
1.3.3 Conservation Laws	10
1.3.4 Conservation Laws with Fourier Amplitudes	12
1.3.5 Geometric Optics – WKB Theory	13
1.4 Statistical Mechanics of Plasmas	15
1.5 Overview of the Plasma Wave Zoo	18
 I Linear Plasma Waves	 21
2 Waves in a Cold Uniform Plasma	23
2.1 The Cold Plasma Dispersion Relation	24
2.1.1 Equations of Motion	24
2.1.2 Cold Plasma Dielectric Tensor	26
2.1.3 Forms of the Dispersion Relation	28
2.2 The CMA Diagram	29

2.2.1	Principal Solutions – Parallel Propagation	30
2.2.2	Principal Solutions – Perpendicular Propagation	32
2.2.3	CMA Boundaries – Cutoffs and Resonances	35
2.2.4	WNS Topology – Spheroids and Lemniscoids	37
2.2.5	Labeling – Left and Right, Ordinary and Extraordinary	39
2.2.6	The CMA Diagram for a One Species Plasma	41
2.3	Phase and Group Velocity in 3-D	46
2.3.1	1-D Case	47
2.3.2	3-D Case	47
2.4	$\omega(k, \theta)$ Dispersion Surfaces	49
2.5	Examples of Propagation at Arbitrary θ	53
2.5.1	Low Frequency Waves	53
2.5.2	Intermediate Frequency Waves – Whistlers	57
2.6	Faraday Rotation	59
2.6.1	High Frequency Limit – Region 1	61
2.6.2	Low Frequency Limit – Region 13	62
2.7	Plasma Interferometry	63
2.8	Electrostatic Waves	66
2.8.1	Validity Conditions for Electrostatic Approximation	67
2.8.2	Lower Hybrid Waves	68
2.8.3	Resonance Cones	69
2.9	Particle Motions near Resonance	72
2.9.1	Lower Hybrid Resonance	72
2.9.2	Upper Hybrid Resonance	74
2.9.3	Cyclotron Resonances	75
3	Waves in Fluid Plasmas	77
3.1	Moments of the Distribution Function	78
3.1.1	The Moment Equations	78
3.1.2	Longitudinal Plasma Oscillations from the Moment Equations	80
3.2	The Fluid Equations	82
3.3	Low Frequency Waves	83
3.3.1	The Low Frequency Dispersion Relation	84
3.3.2	Stringer Diagrams of the Low Frequency Dispersion Relation	86
3.3.3	Approximate Dispersion Relations and Transitions	90
3.3.4	Parallel and Perpendicular Propagation	94
3.3.5	High Frequency Waves	94
3.3.6	Summary of Fluid Waves	98
3.4	Partially Ionized Plasmas and Collisions	99
3.4.1	Neutral Collisions	99

3.4.2	Electron-Ion Collisions	102
3.5	Amplifying Waves and Instabilities	103
3.5.1	Classification of Instabilities	103
3.5.2	Streaming Instabilities	112
3.5.3	Power and Energy Flow in Fluid Plasmas	117
4	Kinetic Theory of Plasma Waves	119
4.1	The Basic Equations	119
4.1.1	The Boltzmann Equation	119
4.1.2	Collisions and the Fokker-Planck Equation	120
4.1.3	BBGKY Theory	122
4.1.4	The Vlasov Equations	126
4.2	Waves in a Thermal, Unmagnetized Plasma	127
4.2.1	Vlasov Method	127
4.2.2	Landau Solution	131
4.2.3	A Physical Picture of Landau Damping	137
4.2.4	Ion-Acoustic Waves and Ion Landau Damping	140
4.3	Waves in a Hot Magnetized Plasma	142
4.3.1	The Evolution of the Distribution Function	142
4.3.2	Integrating Along the Unperturbed Orbits	144
4.3.3	General $f_0(v_\perp, v_z)$	146
4.3.4	Maxwellian Distributions	150
4.3.5	The Dielectric Tensor	155
4.3.6	The Hot Plasma Dispersion Relation	157
4.3.7	Examples of Hot Plasma Wave Effects	158
4.4	Electrostatic Waves	162
4.4.1	Perpendicular Propagation – Bernstein Modes	163
4.4.2	High Order Bernstein Modes	165
4.5	Velocity Space Instabilities	170
4.5.1	Anisotropic Temperature	170
4.5.2	The Ion-Acoustic Instability	172
4.6	Conservation of Energy and Power Flow	173
4.6.1	Poynting's Theorem for Kinetic Waves	173
4.6.2	Group Velocity and Kinetic Flux	176
4.7	Relativistic Plasma Effects	178
4.7.1	The Relativistic Dielectric Tensor	179
4.7.2	Weak Relativistic Limit	182
4.7.3	The Weakly Relativistic X-Wave	185

5	Bounded Homogeneous Plasmas	187
5.1	Introduction	187
5.2	Boundary Conditions	187
5.2.1	Conducting Boundary	188
5.2.2	Plasma-Vacuum(or Dielectric) Interface	189
5.3	Unmagnetized Plasmas	191
5.3.1	Scattering From a Plasma Column	191
5.3.2	Surface Waves	200
5.4	Electrostatic Waves	203
5.5	Cold Plasma-Filled Waveguide	205
5.5.1	The Dispersion Relation	205
5.5.2	Wave Fields and Boundary Conditions	209
5.5.3	MHD Approximation - $\omega \ll \omega_{ci}$	211
5.5.4	Intermediate Frequency Case - $\omega \simeq \omega_{ci} \ll \omega_p$	212
5.5.5	Mode Orthogonality and Power Flow	214
5.5.6	Antenna Problems	217
5.5.7	Experiments in Plasma-Filled Waveguides	222
5.6	Conducting Wall with Vacuum Layer, $m = 0, \pm 1$	224
5.7	Infinite Magnetic Field	226
5.7.1	Plasma-Filled Waveguide in Infinite Field	226
5.7.2	Hot Plasma-Filled Waveguide	229
6	Inhomogeneous Plasma Waves	233
6.1	Introduction	233
6.2	WKB Method for 1-D Inhomogeneities	234
6.2.1	Behavior Near a Cutoff	236
6.2.2	Behavior Near an Isolated Resonance	239
6.2.3	Behavior Near a Resonance-Cutoff Pair	241
6.3	Mode Conversion Theory	242
6.3.1	The Mode Conversion Theorem	242
6.3.2	Solution of the Tunneling Equation	243
6.3.3	Mode Conversion Examples	254
6.3.4	Conservation of Energy	263
6.4	Ray Tracing in 3-D Inhomogeneous Plasmas	269
6.4.1	The Ray Equations	269
6.4.2	The Amplitude Equations	273
6.5	Drift Waves and Instabilities	274
6.5.1	Introduction - Drift Waves	274
6.5.2	The Drift Resistive Instability	276
6.5.3	Kinetic Theory of Drift Waves	278

II	Nonlinear Plasma Waves	287
7	Weak Turbulence Theory	289
7.1	Introduction	289
7.2	Quasilinear Theory	291
7.2.1	Basic Equations	291
7.2.2	Conservation Laws	294
7.2.3	Velocity Space Diffusion in a Magnetic Field	296
7.2.4	H-Theorem for Quasilinear Theory	303
7.2.5	Weak Bump-On-The-Tail Instability	305
7.2.6	Effects of Collisions	310
7.3	Nonlinear Wave-Particle-Wave Applications	311
7.3.1	Plasma Wave Echoes	311
8	Finite Amplitude Plasma Waves	321
8.1	Nonlinear Mechanisms in Plasmas	321
8.1.1	Ponderomotive Effects	322
8.2	Solitary Waves and Solitons	323
8.2.1	Ion-Acoustic Solitary Wave	323
8.2.2	The Korteweg-de Vries (KdV) Equation	326
8.2.3	Ion-Acoustic Solitons	327
8.2.4	Alfvén Wave Solitons	329
8.2.5	Nonlinear Schrödinger Equation	329
8.3	Trapped Particle Effects	334
8.3.1	Nonlinear Landau Damping	334
8.3.2	Bernstein-Greene-Kruskal (BGK) Modes	344
8.4	Parametric Instabilities	348
8.4.1	The Modulated Harmonic Oscillator Model	349
8.4.2	Excitation of Coupled-Mode Oscillations	353
8.4.3	Effects of Finite Pump Wavelength	355
8.4.4	Unmagnetized Plasma Examples	357
A	Complex Variables	363
A.1	Contour Integrals	363
A.2	Analytic Continuation	365
A.3	Steepest Descents – Saddle Point Method	366
A.3.1	Steepest Descents with Saddle Points along the Real Axis	367
A.3.2	Saddle Point Method	369
A.3.3	Spatial Landau Damping Example	371

B Special Functions in Plasma Physics	375
B.1 Plasma Dispersion Function, $Z(\zeta)$	375
B.1.1 Properties of the Plasma Dispersion Function	375
B.1.2 Relation to the Error Function for Complex Argument	376
B.1.3 Relation to the Y Function	377
B.1.4 Relation to the W Function	378
B.2 Relativistic Dispersion Function, $F_q(z)$	378
B.2.1 Relation to Other Functions	379
B.2.2 Properties of the Relativistic Dispersion Function	379
B.3 Gamma Function, $\Gamma(z)$	380
C The Amplitude Equations	381
D Answers to Selected Problems	389
Bibliography	409
Index	414
