PREFACE

1	MOTION OF A CHARGED PARTICLE IN ELECTROMAGNETIC FIELDS	1
1.1	Introduction	2
1.2	Applications of Plasma Physics	14
1.3	Review of Vector Analysis and Electromagnetic Theory	30
1.4	Motion of a Charge in Uniform Fields	36
1.5	Motion in a Nonuniform \mathbf{B} Field	43
1.6	Adiabatic Invariants; Applications; Time-varying Fields	52
2	MAGNETOIONIC THEORY	61
2.1	The Langevin Equation	62
2.2	Electron Conductivity and Mobility	65
2.3	Conductivity Tensor and Dielectric Tensor	69
2.4	Wave Propagation with $B_0 = 0$	72
2.5	The Effect of Collisions	82
2.6	Resonances and Reflection Points with $\mathbf{B}_0 \neq 0$	86
2.7	Wave Propagation Parallel or Perpendicular to \mathbf{B}_0	92
2.8	Alternative Descriptions of Dispersion Relations	98

3	CONTINUUM EQUATIONS FOR A PLASMA	103
3.1	Derivation of Continuum Equations	104
3.2	Treatment of Plasma as a Mixture	109
3.3	Diffusion	113
3.4	Wave Propagation in a Warm Plasma	122
3.5	Longitudinal Waves in a Fully Ionized Gas	129
3.6	Transverse Waves in the Direction of \mathbf{B}_0	134
3.7	Linearized Magnetohydrodynamic Equations	138
3.8	Magnetic Pressure, Viscosity, Reynolds Number, and Diffusivity	145
3.9	MHD Waves	150
3.10	The Nonlinear MHD Equations	155
4	THE BOLTZMANN-VLASOV EQUATION FOR A PLASMA	159
4.1	Distribution Function and the Boltzmann Equation	160
4.2	Transport Equations	166
4.3	The BV Equation and the Relaxation Model	172
4.4	Application to Longitudinal Electron Waves	177
4.5	Landau Damping	181
4.6	Landau Damping of Transverse Waves	188
4.7	The Two-stream Instability	198
4.8	The Debye Potential Problem	203
4.9	Plasma Sheaths	210
5	THE BOLTZMANN EQUATION FOR A PLASMA	223
5.1	Two-body Collisions and the Boltzmann Collision Term	224
5.2	The H Theorem	230
5.3	Maximum Entropy and the Maxwellian Distribution Function	235
5.4	Lowest-order Transport Equations for a Gas Mixture	240
5.5	Calculation of Collision Frequencies	246
5.6	The Electron Runaway Effect	254
5.7	The Thirteen-moment Equations for an Electron Gas	260
5.8	Calculation of Transport Coefficients	267
5.9	Distribution Function for a Strong E Field	273
5.10	The Fokker-Planck Equation	282
6	THE BBGKY EQUATIONS FOR A PLASMA	291
6.1	The Liouville Equation	292
6.2	The Equation for $f^{(1)}$	295
6.3	The BV Equation with Self-consistent Field	299
6.4	Corrections to the BV Equation	303
6.5	Formal Perturbation Technique for Weak Correlations	309

MATHEMATICAL APPENDIX 315

A.1	Delta Function and Fourier Transform Theory	316
A.2	Evaluation of Scattering Angle χ	321
A.3	Derivation of Boltzmann Collision Term	326
A.4	Calculation of Cross Sections	330
A.5	The Chapman-Enskog Technique	335
A.6	Evaluation of $(\partial f / \partial t)_c$ for Electron-Neutral Collisions	340
A.7	Important Formulas and Definitions	347

BIBLIOGRAPHY 351
