

Contents

	Preface	xi
1	Wave Normal Surfaces	
1-1	Introduction	1
1-2	The Susceptibility and Dielectric Tensors	3
1-3	The Dispersion Relation	7
1-4	Polarization and Phase Relations	9
1-5	Cutoff and Resonance	11
1-6	Wave Normal Surfaces	12
1-7	The Clemmow–Mullaly–Allis Diagram	14
1-8	Shapes of Wave Normal Surfaces	18
1-9	Labeling of Wave Normal Surfaces	19
1-10	Transitions of Shapes and Labels	20
2	Waves in a Cold Uniform Plasma	
2-1	Introduction	25
2-2	Clemmow–Mullaly–Allis Diagram for a Single-Ion-Species Plasma	26
2-3	Propagation Parallel and Perpendicular to \mathbf{B}_0	29
2-4	Hydromagnetic Waves of Alfvén and Åström	30
2-5	Ion Cyclotron Waves	32
2-6	The Hybrid Resonances	36
2-7	The Altar–Appleton–Hartree Dispersion Relation	37
2-8	Parallel Current Flow	40

3**Causality, Acoustic Waves, and Simple Drift Waves**

3-1	Introduction	47
3-2	Nonlocal Behavior	48
3-3	Causality	50
3-4	The Electrostatic and Electromagnetic Approximations	54
3-5	Finite Parallel Electron Temperature	57
3-6	Thermal Corrections and Ion Acoustic Waves	60
3-7	Lower-Hybrid Waves	63
3-8	Drift Waves	64

4**Energy Flow and Accessibility**

4-1	Introduction	69
4-2	Energy Transfer	70
4-3	Energy Density, Energy Flux, and Group Velocity	75
4-4	Energy Transfer for Electrostatic Waves	78
4-5	Some Geometrical Relations	79
4-6	Surfaces of Constant Phase and Lighthill's Theorem	82
4-7	Ray Tracing in Inhomogeneous Media	84
4-8	The Kinetic Equation for Waves	87
4-9	Amplitude Transport for a Well-Defined Wave Packet	91
4-10	Radiation Transfer	92
4-11	Accessibility	96
4-12	Calculations of Accessibility	97

5**Kruskal-Schwarzschild Solutions for a
Bounded Plasma**

5-1	Introduction	105
5-2	The Boundary Equations	108
5-3	An Equilibrium Solution	112
5-4	Linearization of the Equations	113
5-5	Solution of the First-Order Boundary Equations	115
5-6	Solution of the First-Order Plasma Equations	117
5-7	The Rayleigh-Taylor Instability	118

6**Oscillations in Bounded Plasmas**

6-1	Introduction	123
6-2	Alfvén and Ion Cyclotron Waves in a Cylindrical Plasma	124

6-3	The Vacuum and Boundary Equations	126
6-4	Solution of the Steady-State Problem	128
6-5	Forced Oscillations	131
6-6	Toroidal Eigenmodes	134
6-7	Density of Modes	137
6-8	Resonance Cones	141

7

Plasma Models with Discrete Structure

7-1	Introduction	149
7-2	The Two-Stream Instability	151
7-3	The Beam Equations	152
7-4	Solution for Two Beams	154
7-5	The Dawson Modes for a Plasma of Many Beams	156
7-6	The Trapping of Charged Particles	159
7-7	A Nonlinear Plasma Wave	160
7-8	Beam-Excited Plasma Oscillations	163

8

Longitudinal Oscillations in a Plasma of Continuous Structure

8-1	Introduction	169
8-2	A Physical Picture of Landau Damping	170
8-3	Landau Damping as Viscosity	175
8-4	The Plasma Kinetic Equations	177
8-5	A Simple Kinetic Model of Landau Damping	178
8-6	Environments for Valid Landau Damping	182
8-7	The Collisionless Boltzmann Equation	184
8-8	Analytic Continuation of the Integrals	186
8-9	The Dispersion Relation	190
8-10	The Van Kampen Modes	191
8-11	The Nyquist Criterion for Instability	193
8-12	The Two-Stream Instability in a Hot Plasma	196
8-13	Electrostatic Waves in a Maxwellian Unmagnetized Plasma	199
8-14	The Plasma Dispersion Function	202
8-15	Asymptotic Behavior of the Dispersion Function	207

9

Absolute and Convective Instability

9-1	Introduction	217
9-2	An Intuitive Picture	218
9-3	Further Analysis and Discussion	220

9-4	Pulse Shape; Convective and Absolute Instability	224
9-5	Convective Instability and Amplifying Waves	225
9-6	Absolute Instability, by the Residue Theorem	229

10 Susceptibilities for a Hot Plasma in a Magnetic Field

10-1	Introduction	237
10-2	A Physical Picture of Cyclotron Damping	238
10-3	Electromagnetic Trapped-Particle Modes	242
10-4	Solution of the Vlasov Equation	247
10-5	Transformation from Lagrangian to Eulerian Coordinates	250
10-6	Susceptibilities for Arbitrary $f_0(p_\perp, p_\parallel)$	252
10-7	Susceptibilities for a Maxwellian $f_0(v_\perp)$	257

11 Waves in Magnetized Uniform Media

11-1	Introduction	265
11-2	Propagation Parallel to \mathbf{B}_0	266
11-3	Cyclotron Harmonic Damping	270
11-4	Transit-Time Damping	273
11-5	Propagation Perpendicular to \mathbf{B}_0 , $\omega \neq n\Omega$	276
11-6	Propagation Approximately Perpendicular to \mathbf{B}_0 , $\omega \simeq n\Omega$	278
11-7	The Marginal State for the Magnetosonic Wave	285
11-8	Power Absorption by Collisionless Processes	288
11-9	Cyclotron Overstability Due to Pressure Anisotropy	292
11-10	Electrostatic Waves in a Magnetic Field	294

12 Effects on Waves from Weak Collisions

12-1	Introduction	305
12-2	Random Walk in Velocity Space	306
12-3	Model Fokker-Planck Equation; Decay of Singular Perturbations	308
12-4	The Function $C(\xi)$	312
12-5	Gyrophase and Gyrocenter Diffusion	317
12-6	Conservation of Momentum	324
12-7	Damping of Alfvén Waves	327
12-8	Particle Conservation; Electrostatic Waves	328
12-9	Hybrid Resonances	332
12-10	Stabilization of Simple Drift Waves	333

13 Reflection, Absorption, and Mode Conversion

13-1	Introduction	339
13-2	Zeros and Infinities in the Refractive Index	340
13-3	Solutions to the Wave Equation Near a Turning Point	343
13-4	Asymptotic Solutions	346
13-5	The Budden Tunneling Factors	348
13-6	The Absorption Layer	349
13-7	Applicability of Singular-Turning-Point Theory	352
13-8	Mode Conversion; The Alfvén Resonance	354
13-9	The Hybrid Resonance	358
13-10	The Standard Equation	360
13-11	The ICRF Equation	369
13-12	The Low-Frequency Alfvén Resonance; Matched Asymptotic Expansions	373

14 Nonuniform Plasmas

14-1	Introduction	383
14-2	The Vlasov Equation	384
14-3	The Electrostatic Approximation	386
14-4	Susceptibilities	390
14-5	The Drift Kinetic Regime	394
14-6	Small-Larmor-Radius Kinetic Theory of Drift Waves	398
14-7	Drift Wave Instability	402
14-8	Flute-Like Drift Waves	406

15 The Straight-Trajectory Approximation

15-1	Introduction	413
15-2	A Long Wavelength Loss-Cone Instability	414
15-3	The Straight-Line Trajectory Approximation	417
15-4	The Enhanced Straight-Line-Trajectory Dispersion Relation	422
15-5	Ion Bernstein Waves	430
15-6	Short-Wavelength Loss-Cone Instabilities	431
15-7	Drift-Cyclotron Instability	434
15-8	Drift-Cyclotron Loss-Cone Instability	436

16 Quasilinear Diffusion

16-1	Introduction	445
16-2	Quasilinear Analysis	447
16-3	Conservation of Energy and Momentum	452

16-4	Quasilinear Evolution	455
16-5	Cross-B Transport	457
16-6	Wave-Associated Drag	458
16-7	Collisional Relaxation and rf Current Drive	461
16-8	Stochasticity	465
16-9	Superadiabaticity	471
16-10	Anomalous Viscosity for Parallel Current	477

17 Quasilinear Diffusion in a Magnetized Plasma

17-1	Introduction	485
17-2	Cyclotron Heating	485
17-3	Heating in Tokamak Geometry	488
17-4	rf-Induced Radial Transport in Tokamaks	490
17-5	Quasilinear Diffusion in a Magnetic Field	492
17-6	Wave-Associated Drag	493
17-7	Electromagnetic Quasilinear Theory	494
17-8	Cyclotron Frequency Heating	499
17-9	Resonant Particle Diffusion	501
17-10	Test-Particle Fokker-Planck Equation	503
17-11	The Coulomb Diffusion Coefficients	506
17-12	Steady-State Solution for $f(v)$	510
17-13	$f(v)$ for Steady-State Isotropic Ion Injection	513
17-14	Superadiabaticity and Decorrelation	515

18 Bounce-Averaged Quasilinear Diffusion

18-1	Introduction	521
18-2	Bounce-Averaging	522
18-3	Particle Conservation in E, μ Coordinates	524
18-4	The Bounce-Average Integrals	528
18-5	The Phase Integral	531
