

CONTENTS

CONTRIBUTORS	v
FOREWORD	vii
1. Introduction	
1.1. Origins of the Molecular Theory	1
1.2. Molecular Physics	4
by DUDLEY WILLIAMS	
2. Molecular Spectroscopy	
2.1. Microwave Spectroscopy	7
by DEFOREST SMITH	
2.1.1. Introduction	7
2.1.2. The Spectral Line	8
2.1.3. Origin of Lines	11
2.1.4. Stark Effect	16
2.1.5. Hyperfine Structure	18
2.1.6. Summary of Procedures	20
2.1.7. Microwave Components	20
2.1.8. Frequency Measurements	30
2.1.9. Spectrometers	31
2.1.10. Sample Handling	36
2.1.11. Application of Microwave Spectroscopy	37
2.2. Infrared	38
by ALVIN H. NIELSEN	
2.2.1. Introduction	38
2.2.2. General Theory of Infrared Spectra	42
2.2.3. Experimental Considerations	73
2.2.4. Infrared Instrumentation	91
2.2.5. Applications of Infrared Spectroscopy	103
2.3. Raman Effect	111
by B. P. STOICHEFF	
2.3.1. Introduction	111
2.3.2. Theory of the Raman Effect	115
2.3.3. Apparatus	125
2.3.4. Raman Spectra and Their Applications	141

2.4. Electronic Spectra	155
by G. WILSE ROBINSON	
2.4.1. Introduction	155
2.4.2. Apparatus	156
2.4.3. Simple Free Molecules	179
2.4.4. External Perturbations	222
2.4.5. Transition Probabilities in Molecular Electronic Spectra	241
2.4.6. Conclusions	261
3. Diffraction Methods of Molecular Structure Determination	
by P. M. HARRIS AND R. A. ERICKSON	
3.1. Introduction to Symmetry Groups and Diffraction Theory	268
3.1.1. Introduction	268
3.1.2. Crystallography and Symmetry	268
3.1.3. The Reciprocal Lattice	275
3.1.4. The Interference Function	276
3.1.5. The Effect of Thermal Vibration on Laue-Bragg Diffraction	282
3.1.6. The Crystal Structure Factor	283
3.1.7. Fourier Representations of a Cell	286
3.1.8. Procedure of Structure Determination	289
3.1.9. Computational Methods for Refinement of Parameters	295
3.2. Techniques of X-Ray Diffraction	301
3.2.1. Introduction	301
3.2.2. Interaction of X-Rays with Matter	302
3.2.3. X-Ray Sources	308
3.2.4. Methods of Recording Diffraction Patterns	309
3.2.5. General Expressions for Integrated Intensities	324
3.2.6. Example of Structure Determination for a Molecule	329
3.3. Techniques of Electron Diffraction	334
3.3.1. Introduction	334
3.3.2. Scattering of Electrons by Atoms	335
3.3.3. Apparatus and Procedures	338
3.3.4. Analysis of Results	341
3.3.5. Accuracy of Results	347
3.4. Techniques of Neutron Diffraction	348
3.4.1. Introduction	348
3.4.2. Scattering of Slow Neutrons by Atoms	349

3.4.3. Apparatus and Procedure	352
3.4.4. Analysis of Results	354
4. Resonance Studies	
4.1. Nuclear Magnetic Resonance	359
by J. R. ZIMMERMAN	
4.1.1. Introduction	359
4.1.2. Elementary Theory	360
4.1.3. General Experimental Methods	386
4.1.4. Techniques in High-Resolution Spectroscopy	404
4.1.5. Methods and Applications of Pulsed rf Systems	425
4.1.6. The Broadline Continuous rf Spectrometer	438
4.2. Electron Spin Resonance	441
by ROY S. ANDERSON	
4.2.1. Introduction	441
4.2.2. Basic Principles of Spectrographs	464
4.2.3. Radio-Frequency and Microwave Components.	469
4.2.4. Amplification and Detection	480
4.2.5. Magnetic Field	484
4.2.6. Sensitivity	490
4.2.7. Electron-Nuclear Double Resonance Techniques	498
4.3. Nuclear Quadrupole Resonance	501
by RALPH LIVINGSTON	
4.3.1. Introduction	501
4.3.2. Nuclear Quadrupole Energy Levels	502
4.3.3. General Experimental Methods	507
4.3.4. Applications	523
5. Mass Spectrometry	
by C. A. McDOWELL	
5.1. Introduction	525
5.1.1. Ionization Potentials	526
5.1.2. Experimental Methods for Determining Appearance Potentials	527
5.2. Molecular Structural Applications	542
5.2.1. Molecular Ionization Potentials	542
5.2.2. The Ionization Potentials of Free Radicals	543
5.2.3. Bond Dissociation Energies	546
5.2.4. Electron Affinities by Mass Spectrometric Methods.	552
5.2.5. High-Temperature Chemistry Studies	558

5.3. Chemical Kinetics	566
5.3.1. Detection of Free Radicals in Thermal Reactions	566
5.3.2. Detection of Free Radicals in Photochemical Reactions	577
5.3.3. Fast Reactions by Mass Spectrometry	579
5.3.4. Ion-Molecule Reactions	582
5.3.5. Decomposition of Molecular Ions and Metastable Ion Transitions	587
6. Molecular Beams	
by JOHN W. TRISCHKA	
6.1. Introduction	589
6.2. Beam Formation and Detection	590
6.2.1. Formation	590
6.2.2. Sources	593
6.2.3. Detection	594
6.3. Gas Kinetics	597
6.3.1. Velocity Distribution	597
6.3.2. Diffraction Experiments	598
6.3.3. Scattering	599
6.3.4. Chemical Reactions	600
6.3.5. Vapor Pressures	602
6.3.6. Surface Physics	602
6.4. Atoms and Molecules in Magnetic and Electric Fields	602
6.4.1. Atoms in a Magnetic Field	602
6.4.2. Molecules in a Magnetic Field	605
6.4.3. Stark Effect	606
6.5. Molecular Beam Optics	607
6.5.1. Optical Analog	607
6.5.2. Refraction in Various Fields	609
6.5.3. Molecular Beam Dynamics	611
6.5.4. Deflection Pattern of a Beam	612
6.5.5. Spectrometer Deflection Systems	613
6.6. The Magnetic and Electric Resonance Methods	615
6.6.1. Introduction	615
6.6.2. Transition Probabilities and Line Shapes	617
6.6.3. Design of Oscillating Fields	620
6.6.4. Separated Oscillating Fields	622
6.6.5. Special Methods for Obtaining Very Narrow Lines	624

6.6.6. Double Resonance	625
6.6.7. The Maser	626
6.7. Spectroscopy	626
6.7.1. Atoms	626
6.7.2. Magnetic Resonance Spectra of Molecules	630
6.7.3. Electric Resonance Experiments with Molecules	634
6.7.4. Neutron Beam Magnetic Resonance	635
6.8. Technology	636
7. Electric Properties of Molecules	
by T. L. WEATHERLY AND QUITMAN WILLIAMS	
7.1. Electric Polarization	637
7.1.1. Molar Polarization	640
7.1.2. Measurement of Dielectric Constant and Molar Polarization.	641
7.2. Refraction of Light	645
7.2.1. Molar Refraction	646
7.2.2. Measurement of Index of Refraction and Molar Refraction	647
7.3. Electric Dipole Moments	648
7.3.1. Determination of Electric Dipole Moments from Dielectric Properties	648
7.3.2. Stark Effect in Microwave Spectra	650
7.3.3. Molecular Beam Method	669
7.3.4. References to Tables of Dipole Moments	670
7.4. Molecular Electric Quadrupole Moments	677
7.4.1. Impact Theory of Spectral Line Widths	677
7.4.2. Multipole Interactions	678
7.5. Optical Activity	679
8. Ultrasonic Studies and Thermodynamic Properties of Fluids	
8.1. Velocity and Absorption of Sound in Gases and Vapors	682
by F. D. SHIELDS	
8.1.1. Theory of Sound Transmission in Gases and Vapors	682
8.1.2. Measurements of Velocity and Absorption in Gases	693

8.2. Velocity and Absorption of Sound in Liquids by ROBERT LAGEMANN	700
8.2.1. Introduction	700
8.2.2. The Optical Diffraction Method	702
8.2.3. The Interferometer Method	704
8.2.4. The Pulse-Echo Method	707
9. Appendix by SIDNEY REED	
9.1. Evaluation of Measurement.	709
9.1.1. General Rules.	709
9.2. Errors	710
9.2.1. Systematic Errors, Accuracy	710
9.2.2. Accidental Errors, Precision	710
9.3. Statistical Methods	711
9.3.1. Mean Value and Variance	711
9.3.2. Statistical Control of Measurements	712
9.4. Direct Measurements	713
9.4.1. Errors of Direct Measurements	714
9.4.2. Rejection of Data	715
9.4.3. Significance of Results	716
9.5. Indirect Measurement	716
9.5.1. Propagation of Errors	716
9.6. Preliminary Estimation.	721
9.7. Errors of Computation	721
AUTHOR INDEX	725
SUBJECT INDEX	745
