CONTRIBUTORS TO VOLUME 3, PART B	ix
FOREWORD	xi
CONTENTS OF VOLUME 3, PART A	xiii
CONTRIBUTORS TO VOLUME 3, PART A	xv

4. Resonance Studies

by J. D. MEMORY and G. W. PARKER

4.1. Introduction to Magnetic Resonance	465
4.1.1. The Resonance Condition	465
4.1.2. Thermal Equilibrium and Relaxation	468
4.1.3. Nuclear Magnetic Resonance Spectroscopy	472
4.1.4. Electron Spin Resonance Spectroscopy	497
4.1.5. Nuclear Quadrupole Resonance	510
4.2. Basic Principles of Radio-frequency Spectrometers	511
4.2.1. The Bloch Equations	511
4.2.2. Continuous Wave Spectrometers	517
4.2.3. Pulsed Spectrometers	535
4.2.4. Nuclear Quadrupole Resonance Spectrometers	544
4.3. Basic Principles of Electron Spin Resonance Spectrometers	554
4.3.1. Principles of Operation	554
4.3.2. Overall Spectrometer Systems	558
4.3.3. Components of Electron Spin Resonance Spectrometer Systems	560
4.4. Computer Methods in Magnetic Resonance	570

5. Mass Spectrometry

by C. A. McDOWELL

5.1. Introduction	575
5.1.1. Ionization Potentials	576
5.1.2. Experimental Methods for Determining Appearance Potentials	579
5.2. Molecular Structural Applications	605
5.2.1. Molecular Ionization Potentials	605
5.2.2. The Ionization Potentials of Free Radicals	606
5.2.3. Bond Dissociation Energies	609
5.2.4. Electron Affinities by Mass Spectrometric Methods	619
5.2.5. High-Temperature Chemistry Studies	628
5.3. Chemical Kinetics	638
5.3.1. Detection of Free Radicals in Thermal Reactions	639
5.3.2. Detection of Free Radicals in Photochemical Reactions	652
5.3.3. Fast Reactions by Mass Spectrometry	655
5.3.4. Ion-Molecule Reactions	658

6. Molecular Beam Spectroscopy

by THOMAS C. ENGLISH and JENS C. ZORN

6.1. Introduction	669
6.1.1. Beam Deflection Experiments	670
6.1.2. Beam Absorption Spectrometers	672
6.1.3. Beam Resonance Spectrometers	673
6.1.4. Beam Maser Spectrometers	675
6.1.5. Beam Translational Spectroscopy	676
6.2. Methods and Experimental Foundations	678
6.2.1. Sources	678
6.2.2. Detectors	711
6.2.3. Deflection, Focusing, and State Selection Using Inhomogeneous Electric and Magnetic Fields	723
6.2.4. Spectrometer Operation and Design	747
6.2.5. The Transition Process	757

6.3. Nonresonance Experiments	765
6.3.1. Deflection Studies	765
6.3.2. Time-of-Flight Experiments on Metastable Molecules	768
6.4. Resonance Experiments	772
6.4.1. Electric Resonance of Diatomic Molecules in $^1\Sigma$ States	777
6.4.2. Magnetic Resonance of Diatomic Molecules in $^1\Sigma$ States	791
6.4.3. Molecules in Metastable, Excited, Electronic States	810
6.4.4. Electric and Magnetic Resonance Studies of Polyatomic Molecules	828
6.4.5. Beam Maser Spectroscopy	839
6.4.6. Miscellaneous	843
Addendum	846
 7. Recently Developed Methods of Investigation	
7.1. Photoelectric Spectroscopy	847
by C. A. McDOWELL	
7.1.1. Photoionization and Photoelectron Spectroscopy	847
7.1.2. Low-Energy Photoelectron Spectroscopy	848
7.1.3. High-Energy Photoelectron Spectroscopy	866
7.2. Inelastic Electron Scattering	868
by EDWIN N. LASSETTRE and AUSMA SKERBELE	
7.2.1. Introduction	868
7.2.2. Born Approximation	869
7.2.3. Apparatus	872
7.2.4. Relative Intensities.	886
7.2.5. Absolute Intensities. Collision Cross Sections. Technique	895
7.2.6. Limiting Oscillator Strengths. Theory	901
7.2.7. Limiting Oscillator Strengths. Experimental Determination	905
7.2.8. Discrepancies and Contradictions	913
7.2.9. Scattering at Larger Angles. Deviations from the Born Approximation. Extended Selection Rules	920

7.2.10. Scattering at Low Kinetic Energies	927
7.2.11. Other Methods and Procedures	941
Appendix: Units	948
7.3. Inelastic Neutron Scattering	952
by G. J. SAFFORD and P. S. LEUNG	
7.3.1. Introduction	952
7.3.2. Theory of the Incoherent Neutron Scattering and Its Application to Molecular Dynamics	956
7.3.3. Experimental Techniques of Neutron Spectroscopy	969
7.3.4. Applications of Neutron Spectroscopy to Studies of Molecular Motions in Solid and Liquid Phases	979
