CONTRIBUTORS TO VOLUME 5, PART A	xiii
CONTENTS, VOLUME 5, PART A	xv
2. Methods for the Determination of Fundamental Physical Quantities (<i>Continued from Vol. 5, Part A</i>)	
2.3. Determination of Mass of Nuclei and of Individual Particles	1
2.3.1. Mass Spectroscopy. by H. E. DUCKWORTH	1
2.3.2. Determination of Atomic Masses from Nuclear Reaction and Nuclear Disintegration Energies by WARD WHALING	9
2.3.3. Atomic Mass Determination from Microwave Spectra. by S. GESCHWIND	20
2.3.4. Measurement of Mass with Cloud Chambers and Bubble Chambers by W. B. FRETTER	35
2.3.5. Determination of Mass of Nucleons in Emulsions by MARIETTA BLAU	37
2.4. Determination of Spin, Parity, and Nuclear Moments	44
2.4.1. Spectroscopic Methods	44
2.4.1.1. Optical and Ultraviolet Spectroscopy by JOSEPH G. HIRSCHBERG	44
2.4.1.2. The Investigation of Short-Lived Radio-nuclei by Atomic Beam Methods by JOHN C. HUBBS and WILLIAM A. NIERENBERG	58
2.4.1.3. Microwave Method by C. K. JEN	85
2.4.1.4. Nuclear Magnetic and Quadrupole Resonance by C. D. JEFFRIES	104

2.4.1.4.7.3. The Electron Nuclear Double Resonance (ENDOR) Technique	127
by G. FEHER	
2.4.2. Indirect Methods	129
2.4.2.1. Angular Correlation	129
by HANS FRAUENFELDER	
2.4.2.2. Conversion Coefficients	152
by A. H. WAPSTRA	
2.4.2.3. Nuclear Orientation.	162
by E. AMBLER	
2.5. Determination of the Polarization of Electrons and Photons	214
by H. FRAUENFELDER and A. ROSSI	
2.5.1. Introduction	214
2.5.2. Description of Polarized Beams	216
2.5.3. Motion of Electrons in Electromagnetic Fields	223
2.5.4. Polarization Transfer	233
2.5.5. Detection of Electron Polarization	239
2.5.6. Detection of Photon Polarization	264
2.6. Determination of Life-Time	275
2.6.1. Long Life-Time	275
by H. DANIEL and W. GENTNER	
2.6.2. Short Lifetimes	303
by M. DEUTSCH	
2.7. Determination of Nuclear Reactions	339
2.7.1. Determination of the <i>Q</i> Value for Nuclear Reactions	339
2.7.2. Determination of Nuclear Energy Levels from Re- action Energies	352
by FAY AJZENBERG-SELOVE	
2.7.3. Total Interaction Cross Sections	366
2.7.4. Nonelastic Neutron Cross Sections	397
2.7.5. Differential Interaction Cross Sections	411
2.7.6. Differential Elastic-Scattering Cross Sections	472
2.7.7. Supplementary Remarks	482
by LOUIS ROSEN and DAN W. MILLER	
2.8. Determination of Flux and Densities	485
2.8.1. Determination of Flux of Charged Particles	485
by O. CHAMBERLAIN	

2.8.2. Determination of Differential X-ray Photon Flux and Total Beam Energy by J. S. PRUITT and H. W. KOCH	508
---	-----

3. Sources of Nuclear Particles and Radiations

3.1. Radioactive Sources by G. D. O'KELLEY	555
3.2. Artificial Sources	580
3.2.1. Low-Energy Sources	580
3.2.1.1. Cascade Rectifiers	581
3.2.1.2. The Electrostatic (Van de Graaff) Generator	584
by M. H. BLEWETT	
3.2.1.3. Nuclear Reactors	590
by H. KOUTS	
3.2.2. Medium- and High-Energy Sources	623
by M. H. BLEWETT	

4. Beam Transport Systems

4.1. Introduction	691
4.2. Beam Bending and Focusing Systems by R. M. STERNHEIMER	692
4.2.1. The Trajectories of Particles in a Strong Focusing (Quadrupole) Magnet	694
4.2.2. The Lens Equations for a Single Quadrupole Magnet and for a Two-Magnet System. Conditions of Double Focusing by a Two-Magnet System	696
4.2.3. The Matrix Method of Calculation for Strong Focusing Magnet Systems	719
4.2.4. The Focusing Equations for Deflecting Wedge- Shaped Magnets with Finite Field Index n	731
4.3. Beam Separators by BRUCE CORK	747
4.3.1. Degrader Type Separation	747
4.3.2. Electromagnetic Separators	748
4.3.3. Radiofrequency Separators	750
4.3.4. Separation by Nuclear Interactions	751
4.4. Some Examples of Beam Transport Systems by BRUCE CORK	752
4.4.1. High Momentum Beams Using Counters as De- tectors	752

4.4.2. Separated Beams for Bubble Chambers.	755
4.4.3. Special Beams.	759

5. Statistical Fluctuations in Nuclear Processes

by ROBLEY D. EVANS

5.1. Frequency Distributions	761
5.1.1. The Binomial Distribution	761
5.1.2. The Multinomial Distribution.	762
5.1.3. The Normal Distribution	763
5.1.4. The Poisson Distribution	764
5.1.5. The Interval Distribution	767
5.2. Statistical Characterization of Data	771
5.2.1. Mean Value	772
5.2.2. Variance	773
5.2.3. Sample Variance	774
5.2.4. Standard Deviation	774
5.2.5. Standard Error	776
5.2.6. Probable Error	778
5.2.7. Dimensions	778
5.2.8. Precision vs. Accuracy	779
5.3. Composite Distributions	780
5.3.1. Combined Probabilities	780
5.3.2. Superposition of Several Independent Random Processes	781
5.3.3. Propagation of Errors	783
5.3.4. Difference of Two Mean Values	784
5.3.5. Significance Levels and Confidence Intervals	785
5.4. Tests for Goodness of Fit	786
5.4.1. Pearson's Chi-Square Test	786
5.4.2. Poisson Index of Dispersion	789
5.4.3. Confidence Interval for the Standard Deviation of a Normal Distribution	791
5.5. Applications of Poisson Statistics to Some Instruments Used in Nuclear Physics	792
5.5.1. Effects of Resolving Time in Single-Channel Counting	792
5.5.2. Effects of Resolving Time in Coincidence and Anti-coincidence Circuits	794
5.5.3. Scaling Circuits	795
5.5.4. Counting-Rate Meters	799

5.6. Useful Inefficient Statistics	803
5.6.1. Estimate of the Mean Value	803
5.6.2. Estimate of Standard Deviation	803
5.6.3. Estimate of Standard Error	803
5.6.4. Estimate of χ^2	804
5.6.5. Examples	806

Appendix 1

by SIDNEY REED

1. Evaluation of Measurement	807
1.1. General Rules	807
2. Errors	808
2.1. Systematic Errors, Accuracy	808
2.2. Accidental Errors, Precision	808
3. Statistical Methods	809
3.1. Mean Value and Variance	809
3.2. Statistical Control of Measurements	810
4. Direct Measurements	811
4.1. Errors of Direct Measurements	812
4.2. Rejection of Data	813
4.3. Significance of Results	814
5. Indirect Measurement	814
5.1. Propagation of Errors	814
6. Preliminary Estimation	819
7. Errors of Computation	819

Appendix 2. Kinematics

by R. M. STERNHEIMER

1. Equations for the Lorentz Transformation from the Laboratory System to Center-of-Mass System; The Jacobian for Particle Reactions	821
2. Maximum Angle Criterion for the Identification of Outcoming Particles in Fundamental Collisions	828
3. Kinematics of Two-Body Decay	831
4. Threshold Energies for Associated Production of Unstable Particles	833
5. Phase Space Factors for Two- and Three-Particle Final States	838

Appendix 3. Properties of Elementary Particles and Particle Resonance States

Table 1	845
Table 2	846
Table 3	847
