

CONTENTS OF VOLUME 9, PART A

CONTRIBUTORS TO VOLUME 9, PART A	ix
FOREWORD	xi
PREFACE TO VOLUME 9	xiii
CONTENTS OF VOLUME 9, PART B	xv
CONTRIBUTORS TO VOLUME 9, PART B	xvii
LIST OF SYMBOLS	xix

1. Plasma Waves and Echoes

by K. W. GENTLE

1.1. Plasma Waves	1
1.2. Observation of Plasma Waves	11
1.3. Plasma Wave Echoes	27
1.4. Observations of Echoes	34

2. Microwave Scattering from Plasmas

by T. C. MARSHALL

2.1. Introduction	37
2.2. The Electromagnetic Problem	41
2.3. The Fluctuation Problem	48
2.4. The Experimental Problem	52

3. Plasma Diagnostics by Light Scattering

by A. W. DESILVA AND G. C. GOLDENBAUM

3.1. Introduction	61
3.2. Theory of Light Scattering	63
3.3. Major Design Parameters of a Scattering Experiment	78
3.4. Optical Systems	91
3.5. Interpretation of Data	106
3.6. Appendix	111

4. Atomic Processes

by R. C. ELTON

4.1. Introduction	115
4.2. Experimental Methods of Plasma Analysis	119
4.3. Specific Atomic Processes in Plasmas	134
4.4. Useful Supplementary Material	164

5. Plasma Heating by Strong Shock Waves

by R. A. GROSS AND B. MILLER

5.1. Introduction	169
5.2. Experimental Components of Electromagnetic Shock Tubes	179
5.3. System Performance and Experimental Results	208

6. Collisionless Shock Waves in Laboratory Plasmas

by E. HINTZ

6.1. Introduction	213
6.2. Theoretical Models for the Formation and Structure of Shock Waves	220
6.3. Experimental Methods	241
6.4. Experimental Results	264

7. High-Frequency Instabilities

by W. A. PERKINS

7.1. Introduction	275
7.2. Driving Mechanisms for High-Frequency Instabilities	276
7.3. Types of Distributions That Are Unstable	276
7.4. Linear Theory and Dispersion Relation	277
7.5. Absolute and Convective Instabilities	278
7.6. Longitudinal (Electrostatic) Instabilities	279
7.7. Transverse (Electromagnetic) Instabilities	299
7.8. Computer Simulation Experiments	302

8. Low-Frequency Instabilities

by S. YOSHIKAWA

8.1. Classification of Low-Frequency Instabilities	305
8.2. Growth Rates of Low-Frequency Instabilities	318
8.3. Relation to Experiment	322
8.4. Experiments	329
8.5. Experimental Methods To Study Low-Frequency Oscillations	338
8.6. Conclusions	342

9. Collisional Drift Instabilities

by H. W. HENDEL AND T. K. CHU

9.1. Introduction	345
9.2. Theory	349
9.3. Experiment	362
9.4. Instability Identification	365
9.5. Mode Stabilizations	370
9.6. Critical Fluctuations	375
9.7. Amplitudes in Stable and Unstable Regimes	379
9.8. Enhanced Radial Plasma Transport Caused by Collisional Drift Waves	383
9.9. Concluding Remarks	392

10. Instabilities of High-Beta Plasmas

by H. A. B. BODIN

10.1. Introduction	395
10.2. Examples of High-Beta Systems—Methods of Plasma Production	401
10.3. Theory	403
10.4. Diagnostic Measurements	418
10.5. Experimental Investigation of High-Beta Instabilities	429
10.6. Dynamic and Feedback Stabilization	447
10.7. Future Trends	448
AUTHOR INDEX	451
SUBJECT INDEX	463
