

CONTENTS

FOREWORD	ix
PREFACE	xi
1. Introduction to the Far-Infrared	
1.1. The Spectrum. Basic Equations	1
1.2. Historical Background	4
2. Far-Infrared Wave Generation	
Introduction	10
2.1. Incoherent Sources.	13
2.2. Harmonic Generators.	18
2.3. Electron Tubes	30
2.4. Relativistic Electrons	42
2.5. Gas Lasers	45
2.6. Solid State Lasers and Junctions	64
2.7. The Electron Cyclotron Maser	77
3. Wave Transmission and Transmission Systems	
Introduction	82
3.1. Preliminary Optical and Microwave Concepts	82
3.2. Waves in Material Media	87
3.3. Quasioptical Components	112
3.4. Waveguides and Quasimicrowave Components	113
3.5. Grating Monochromators	130
3.6. Multiplex Spectrometry.	140
3.7. Extensions of the Techniques of Microwave Spectroscopy	150
3.8. The Fabry-Perot Spectrometer	156

4. Detection of Far-Infrared Radiation

Introduction	157
4.1. Point-Contact Crystal Diodes	158
4.2. Thermal Detectors	166
4.3. Photoconductive Detectors	174
4.4. An Electron Cyclotron Resonance Method of Radiation Detection and Spectral Analysis	188
4.5. The Josephson Junction	201
4.6. Limits of Detection Set by Random Fluctuations . . .	210

**5. Cyclotron Resonance with Free Electrons and Carriers
in Solids**

Introduction	229
5.1. Absorption by Nonrelativistic Free Charges.	230
5.2. Cyclotron Resonance and Magnetoplasma Effects in Semi- conductors and Metals	238
5.3. Faraday Rotation and Related Magnetooptic Effects in Semiconductors	257
5.4. Positive and Negative Absorption by Weakly Relativistic Electrons	259

6. Wave Interactions in Plasmas

Introduction	265
6.1. Plasma Conductivity and Tensor Dielectric Constant. .	266
6.2. Wave Propagation and Dispersion Relations	272
6.3. Propagation across a Magnetic Field	273
6.4. Propagation along a Magnetic Field	276
6.5. Comments on Warm Plasma Effects	278
6.6. Phase Shift and Attenuation Measurements	280
6.7. Changes of Polarization.	286
6.8. Bremsstrahlung and Blackbody Radiation from Plasmas	287
6.9. Cyclotron and Synchrotron Radiation	295
6.10. Longitudinal Plasma Waves	300

7. Spectra of Gases, Liquids, and Solids in the Far-Infrared

Introduction	302
7.1. Rotational Spectra of Molecules	306
7.2. Vibration-Rotation Spectra	321
7.3. Molecules with Electronic Angular Momentum	328
7.4. Intensities and Shapes of Spectral Lines	339
7.5. Dispersion in Liquids and Solids	347
7.6. Crystal Lattice Vibrations in Solids	358
7.7. Ferroelectric Crystals	372
7.8. Magnetic Resonances	385
7.9. Raman Effect	420
7.10. The Energy Gap in Superconductors	431
AUTHOR INDEX	442
SUBJECT INDEX	452
